Found a X54-1540-00 digital display board in my collection, left over from a parted out TS-830.
Thought someone might need this one. It was tested OK. A little dirty ,but functional.
This may fit other KW radios, but I can't say for sure. $48
shipped by Priorty mail. 73, Ed K4GJ
P.S. I also have a vfo(internal) for the same radio , but don't know if it works.

2372. Re: JOHNSON PANEL REFINISH

IF that price includes all the stripping of old finish, and whatever misc. "body & fender" work required to provide a decent foundation for silk screening, labor CAN be high... Might be worth asking for a price on one already prepped for refinishing, the actual silk screening itself is pretty fast and easy - it's the initial setup, etc., that adds to cost.

2376. I Don't Like Auctions...

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-08 00:00:00 UTC
From: "Al Lorona, Jr." <al_lorona@agilent.com>
Message-ID: <87q03qjsd1@web1.cup.hp.com>
Source record: 71403

...and I'll tell you why. Whereas in the past when someone wanted to sell something, they'd post a "For Sale" message, now you're very much more likely to see a "For Auction" ad. I guess people are thinking to themselves, "Why should I put an upper limit on the item I'm trying to sell? I'll put it up for auction, yeah!, and if some sucker wants to pay me way over the item's value, great!" Such is the influence of E-Bay and the greed lurking in the heart of man, I guess.

If you were thinking, "Al, that's how fine collectibles are sold. A rare Van Gogh is always auctioned, never sold," then you have difficulty distinguishing between a truly unique and transcendent work of art, and a piece of electronic equipment. I pity you.

Just the other day, I read a message from a guy who was saying that some piece of Collins gear had just fetched a world record price on, you guessed it, E-Bay. But, there are so many ways to fake the system out just to make it *look* as if an item had just been sold. Are we really certain that someone paid, say, $5,000 for a 75-A-whatever? Couldn't I post a totally bogus item and get a friend to bid an outrageous price for it, then sit back to enjoy the reactions of the bystanders? Or worse yet, couldn't my accomplice act as a shill during the bidding just to get other folks' bids up?

Are you guys concerned about safeguards, or do I just need to take a Valium and chill?

Al, W6LX

Al
Sorry to say, your first paragraph says it all. When I sell a piece of my collection, I want the highest price possible. Believe it or not, I have found decent gear for a fair price on E-bay. The problem with most people is that they don't have a clue what an item is worth. Not the auction price but what it is actually worth. Set YOUR top price and stick with it. You will probably lose 80% of you bids, but the ones you win will be worth it. If a person is willing to give me $5k for my Drake 2B then so be it, I'll cash the check. As far as shill bidding, the culprits usually show their hand with many new bidders who have no feedback. Next time you suspect shill bidding, check the latest bidders. You will find a pattern there.

I would just like to say, that I sometimes sell on e-bay and I would never do the things you inquire, due to the fact that, I dont want to win my own item and have to pay the charges e-bay implies when item is sold. E-bay charges a percentage of the final sale cost plus an insertion fee. an item of $100.00 dollars could have a charge of about $6.00 and imagine what it would be if the price was $5,000.00?

2401. Heathkit O-12 Lab Scope Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-08 00:00:00 UTC
From: Bill Evans <bevans@ebsys.mb.ca>
Message-ID: <8XNn4.13180$e97.521995@typhoon.mbnet.mb.ca>
Source record: 71528

I just inherited a fairly dingy O-12 of unknown condition
and without a manual. One tube is missing from its socket -
that being the only tube in the unit that is NOT located on
a PC board. It is located beside the main transformer and
the largest can electrolytic capacitor to the rear of the
horizontal portion of the chassis.

Before I spring for a manual, I'd love to find out what tube
is required, insert same and see what happens. Can anyone
tell me what the tube type is that is missing?

Assistance will be much appreciated.

Date: 2000-02-08 00:00:00 UTC
From: Ron <kc4yoy@pop.trellis.net>
Message-ID: <01bf7139$0cf32880$224a96d0@ron>
Source record: 71530

I offered this speaker a while back for trade looking for
a matching speaker for my NC-183D. I thought I had a
trade deal going but the other party never responded to
my counter offer.

So I'll try again, this time it's for trade or will consider
a reasonable cash offer.

Military Loudspeaker - LS-3.
Original paint, tag and ink stamps.
Non original speaker cord wired thru head phone jack
and connected to speaker terminals.
Over all very good original condition, some light scratches.
but overall good original condition.
IF there is supposed to be a transformer inside the
cabinet it's missing cause there's not one there.

Can send digital photo if interested.

Howdy, folks.

Got my new 160 meter dipole up and it is really making a difference for me even on other bands. 10 MHz is a really great band, and I am now on there more than in previous years. The 160 dipole works rather well for me here. So look for me, mostly CW at night, 10 meters in the daytime.

Consider getting onto 10 meters! It is hot right now. Lots of DX. The Ten Ten International club is challenging Amateurs to work 2000 contacts on 10 meters, any mode, any 10 meter frequency, in the year 2000. I've posted my current 10 meter logs on the site. See if you are in there (if ya worked me!).

A reminder:

http://cw.hfradio.org - CW / Morse Code Resource center. Lots of stuff coming down the line. If you have stories, tips, links, and other things, would you share them with me, and allow me to post them on this new resource?

As usual, you are also invited to visit http://hfradio.org - a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

Looking for 1950s and 1960s vintage Raytheon CB radios
for my personal collection. I have TWR-2, TWR-5, and
TWR-7; looking for others that I don't have. I prefer
sets that are complete, cosmetically good, and either
working or reparable electrically. Also interested in
owner's and service manuals, mics, mouting brackets,
crystals, and other related Raytheon stuff. I may be
interested in "parts units" or "fixer-uppers" also.

Whatcha got?

Thanks and 73,
Dean - K5DH

The answer is "going-going->>" There were about four stores in the Miami aera 10 years ago. The last one was Microwave Equipment Co. They had a two story block long building full of old aircraft radios, test equipment, and parts. About two years ago it was all put into large containers and sold to China for $.07 / Lb. Simple, the building and land was worth more than the electronic stuff.

There is a schematic at http://bama.sbc.edu/ for this scope, as
well as a lot more equipment.

There are two rectifiers in that unit. One is an EZ81, and the other
is a 1V2. Looking at the front of the unit towards you, the EZ81 is
at the left rear, and the 1V2 is at the right rear, the side where the
larger cable harness comes through the grommet.

1. I can't imagine ANYONE willing to go to the trouble to place an ad, complete with photo on Ebay - and THEN pay the COMMISSION for an item that is considered "sold"! When those sales END, with a price attached, the SELLER must pay Ebay the appropriate COMMISSION on that amount - would YOU do that just for some wierd ego factor?

2. If you don't LIKE them, don't USE or visit them - and FILTER the ones that show up here!

What's the problem?

Do you have an old junked or parts Mackay 3020 receiver? I especially need the audio amp module and the frequency switching unit (the one with the levers). If I can get these I have a working set! Please advise if you can help and let me know what you want for the unit or these parts.

Preston

Yes indeed Al, you do need chemical attitude adjustment!

I've seen a couple of Van Gogh's, and a Rembrandt. My opinion is that I wouldn't cross the street to see them again. Hey, it's only a sheet of canvas, slathered with multiple layers of hydrocarbon based pigments.

And the people that own them make a real big deal about not letting you get too close. No touching allowed! No smelling either. They are not nice people; generally far too uptight and edgy as they think of the potential danger you may represent to their megabuck wallpaper. All you can do is look at 'em, from 10 feet away. And no bright lights or strobes; wouldn't want to degrade them delicate pigments. (Or see all the cracks and flakes and crud up close.)

Are you really telling me that adjusting the frequency dial of a 51J4 is not a unique and transcendent experience for you? Can you not see the art in any number of Tektronix scopes or HP sweepers or analyzers? Have you ever seen any of those 30's era lab equipment, with beautiful woodwork and shiny black bakelite panels?

Go look at a new PC motherboard. The traces are starting to look like a half-tone to me, what with the fineness and close spacing. (OK, it's not today's BA; but it will be next decades BA!)

Don't pity me for seeing art and human passion in every chassis on the surplus shelf. Unless your post was a troll, maybe the real pity is that a guy posting from the Agilent domain can have strayed so far from the soul of hardware.

Repent now, Al, or trade the boatanchors for a Pokemon investment. >;)

I've bought and sold on ebay, and I've bought and sold on the rec groups. Sometimes I've paid too much on both, sometimes I've gotten good deals on both. Sometimes, I've not gotten back on ebay what I've put into the item. Hey, life is a risk!

I must say, however, that I've found a much wider selection of goods on "the bay" than I've located on the newsgroups. Sometimes, money is no object. Sometimes, it is. I bid accordingly. Both have given me the opportunity to own some of the things I drooled over as a kid. As Spock said, "Sometimes the wanting is more fulfilling than the having..." How true. So the thing I bought goes on the market a year later. I'm not making money doing this, but am having a ball!

My suggestion is, if you don't like auctions, don't attend them! Whether it's a web auction, or Billy-Bob's auction house in Possum Trot, Kentucky, they're really all the same!

>in the heart of man, I guess.

Al, I believe you are missing the salient point - how do you determine
"the item's value"? Many of the items that I have sold via e-Bay sold
for less than I expected, and others have sold for more than I
expected. I have purchased a few items via eBay as well, and have
generally paid less than I expected to pay. Are you ascribing to greed
that which belongs to ignorance of the market?

>If you were thinking, "Al, that's how fine collectibles are sold. A rare Van

Ah, have you never experienced the warm glow of an SX-28 in a darkened
room? Have you not closed your eyes and imagined yourself in another
place and time as Sinatra's voice is reproduced by a push-pull audio
stage? I experience Boatanchors as art - and I suspect, for many, that
their appeal is the same. No pity needed, but thanks all the same!

Bill,

Just a little word of warning. If the missing tube is the EZ81,
double check that a modification has not been made to eliminate
the need for the tube. A popular modification, for old tube equipment,
was to replace the rectifier tube with a couple of silicon diodes.
Sometimes they would build them into an old tube base, so that the
circuit would not have to be modified. Other times they would
wire them under the chassis directly on the tube socket or on
a available terminal strip.

Just a word of caution before you "insert same and see what
happens". You may be in for a big supprise.

It would also be wise to check the power transformer for any
shorted windings and any shorts to the chassis, before you plug
it in.

Martin

Your speaker, -with- the transformer is $16.00 in the Fair Radio
catalog. Without the transformer it's worth about 10 bucks.
A clean National speaker is worth from 50 to 100 bucks.
Good luck with your trade.

Sorry AL - I agree with everyone and just want to say...

First !

If you LIVED in California (6 land) - you have TONS of Surplus stores and ham fests to go to.... I bet there are more hams per square mile there than any place on Earth.

Hell... most of the really cool ham rigs CAME from California! ... SWAN - GONSET - SBE to name just a few... some of us ham live in places like Dallas TX and all we got is these stinky old Collins junk.

Second !

If you don't like prices on Ebay ... consider changing your life style. Like getting a better job. If the rich are buying this stuff and you want it... then become rich... get a job - if you already have one - get a better paying job... if your retired then scan the wanted pages and look for high paying jobs - go to school and get that job...

Then you can buy anthing you want on Ebay... or not... Money doesn't bring happiness - but it gives you more choices...

Also Ebay DOES have bargins - SHEW had a very nice SX-190 that went for $112. Seen them at hamfests here in Dallas going for $160 -210. You just gotta look around and have a laid back bidding attitude...

NOTE: The my-deja address is a spam-trap. Don't use it. Anything sent there will bounce. There's a real address in my signature block.

-=-=-=-=-=-=-=-=-=-=-=-=-

This may draw flames, or it may not. Whatever the case, I felt compelled to state my piece. Those who make a habit of posting for-sale, for-trade, and for-auction ads here instead of rec.amateur.radio.SWAP may want to pay particular attention.

I have just finished installing filters on my newsreader to BLOCK any message with FS, FT, or FA in the subject line for any of the rec.amateur.radio newsgroups EXCEPT FOR .swap. It is my opinion that such ads belong in the group which was specifically created to hold them and NOT in the others.

The rest of you may not agree. That's your privilege. However, you may also find it interesting that before I clicked 'Apply Filters' there were a dozen messages shown in this group. After filter application, there were three left.

Pretty amazing, considering that this group (if I recall correctly) was originally designed for technical discussions of boatanchor-vintage hardware and not for getting clogged with ads.

For the sake of avoiding further clutter, I will not respond to any replies in this group. If you have a countering opinion, my E-mail address is in my signature block in human-readable form.

Hi all

I have seen and saved the posts from Dee before. I don't seem to
remember any, and am too lazy to Deja, posts from people that have
used his services. I tend to agree with K6HM, that the price is quite

steep. Anyboby that has had radio faces and/or cases done by Dee care to come forward with comments/endorsements? Please include names and calls! Dee, could you spare the time to enlighten us on the processes involved?

Maybe I am the exception but all my boatanchors, except my desk kw, have mint faces and cases.

N9JBF

Dan

This was made in England in the mid 60s. Page 108 of Shortwave Receivers Past and Present. 8 tubes 130:1 tuning ratio with the smooth tuning dial. Covers 480 kHz - 30,000 kHz on five bands including a BFO.

Cosmetically very nice, works well.

Serious offers only please.

STRANGE - most of you fellas wouldn't think ANYTHING about having a CAR FENDER repaired/painted for $275 - but think the SAME effort and craftsmanship on an equipment panel, PLUS the finely detailed silkscreening is too HIGH?

1. strip all original paint
2. repair any damaged areas
3. apply primer - wait to dry
4. carefully sand primer, checking for blemishes or low spots
5. if blemishes ARE found, repair, and apply second primer coat - wait to dry
6. apply base grey color coat - wait to dry
7. mask, and apply maroon coat - wait to dry
8. apply silkscreen lettering - wait to dry
9. apply silkscreen crosshatch design - wait to dry
(green as I recall)
10. all the above duplicated on the VFO bezel
11. buff out finished panel/bezel

SO, how much labor/time do YOU figure is involved - and would YOU want to do the job, in a PROFESSIONAL MANNER for LESS money?

Many pay $1000 just to get a CAR FENDER repaired/painted - and you think all the above is TOO HIGH? SHEESH!

It *IS* - but it's ALSO part of the price for involvement in boatanchors, and sometimes it ain't a CHEAP pastime!

Gee, all I did was ask about endorsements/recomendations from "Dee's"
customers, ask "Dee" to enlighten us/me about "His" process, and state
my opinion, which I think highly of:), that I thought the price was
steep, IMHO it is. Maybe I insulted you without knowing it, if I did,
sorry.

If asking for names and call signs is a problem for anyone, get over
it.

Now, If anyone out there wants to discuss what they have had done by
"Dee", I would like to hear from them. I also would like to hear from
"Dee" about how "he" does his work and maybe a little background. In
the future, I may want to have my kw faceplate redone. I don't think
I would send it to someone without talking to others that had work
done by him first. Yes I know that he hasn't said he does kw faces,
yet.

Amen to that. Some people have to get up early on Sunday and go to
church to get the same feeling I can get by pulling the covers from my
454 or leafing through the manuals for my 492. So as long as I can keep
my EBay budget down to < 10% of my salary I figure I'm coming out ahead,
hi!

> Go look at a new PC motherboard.

Druther not. I have to deal with that stuff all day to support my EBay
habit....

Then again I'd be sore, too, if the goodwill and reputation my company
had built up over 50 years had just been squandered by turning its name
over to a generic PC clone outfit.

The Stancor A-3898 is rated for 300 Watts. It's called a Poly-pedance Modulation transformer. Will match all common impedances of Class B modulator (2000 to 20000 ohms) to Class C load 2000 to 20000 ohms.

Maximum 260 mA dc primary and secondary.

8-1/8" high
5-3/4 x 7-5/8" base area
Shippinbg weight 37.9 pounds
Upright mounting with studs on end bells

I hope this helps.

73, Bob K6DDX

2484. Wanted Power Transformer for a Gonset GSB-100

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-09 00:00:00 UTC
From: WA0KDS <WA0KDS@mcipnet.com>
Message-ID: <38A23CF1.530F@mcipnet.com>
Source record: 71489

Got a beautiful Gonset GSB-100 but the transformer went out 30 years ago and was replaced with an external power source. The transformer is also missing so can't rewind it, not that I would but at least it would have been an option.

Any help out there with a JUNKER or ??

Thanks
Ron WA0KDS/7

>
That comment about an electrodynamic speaker didn't make much sense to
me either, because I was fairly certain those Super Pros didn't have
an internal power supply.

In the sixties, there was a surplus column entitled Surplus Sidelights
in CQ magazine, and I can picture one devoted to the early Super Pros,
that must give details of the differences. I just checked, and I can't
find the article, but someone with a better organized set of back issues
might be able to dig it out. I'd say the specific column on the Super Pros
was in 1964 or 65.

My comments were intended to address the THREAD, not any particular
individual - including YOU...

I was primarily attempting to illustrate the amount of work involved in
a professional-grade restoration of an equipment panel - I really think
SOME here figure it's just a 5 minute job to slop on some paint, and
then wait for the cash register to ring...

My comparison is to radios with like new face plates/cases I can and have picked up for less than the cost quoted, not only are they in nice condition some are mint, and they are original. Original is highly prized by some. I don't buy equipment to resell or make a profit on, if I trade or let it go to another collector it is very close to the cost I paid for it. BTW I have been doing that for well over 20 years, that is where my experience comes from. Do you know of anyone that does panels for less? Do you do panels? Or was that your attempt at sarcasm? It's hard to tell over the computer:) I do know people that do silk screening on a proffesional level, and no I don't mean t-shirts and such, that have expressed an interest in trying to redo my kw face plate. I may give them a comparable piece of alum. and let them try. If I do, I will let you know how it turns out and how much they would charge you. Fair enough?

You forgot the part after they do the "sponge"paint job,
they take a picture in poor light so the thing looks good
and then sell it on eBay, for a severely inflated price.

Just my opinion..

Bob

Hello,I have for sale the following Yaesu HF radio and accessories.It covers 80 through 10 and puts out 80 watts.
1-FT-7B radio with mic
1-FT-12 power supply/speaker
1-YC-7B remote digital frequency display
1-MANUAL

I am asking $325.00 plus shipping (to lower 48) all items are in perfect working condition and are at least an 8 or 9 in appearance.
Regards
Bob Stamper

2507. Fletcher Munson MX100 Tuner: worth saving?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-10 00:00:00 UTC
From: time1159@aol.com
Message-ID: <20000210010623.27201.00002944@ng-cc1.aol.com>
Source record: 71313

Fletcher Munson MX100 Tuner: What do I have here anyway?

About 32 years ago (late 1960's) I bought this tuner from the father of a friend.
He seemed an "audiophile" to me at the time, but my youthful perceptions may have been wrong.

My recollections is that is used to sound really good, but it's been sitting in a box
for many years. (It isn't broken as far as I know, just unused). I recently got
interested in it again , wondering what it's lineage is, and whether it is worth
restoring it to full functionality. It almost certainly needs to be calibrated, and it
might need a tube or more as well.

It's a tube tuner (no transistors at all), with a capacitor-based tuning system (with the strings and pulleys and so on). The chassis and silk-screened front panel are nicely factory-done.

The tuning indicator is a mechanical indicator that slides behind a glass window
calibrated with the FM frequencies.

There is a really funky signal strength indicator, made of some kind of flourescent device with two glowing blue horizontal bars entering the window from the sides. They grow longer with greater signal strength, and they meet in the middle at peak signal strength.

The push-button On/Off switch sticking through the front panel has the look of a home-brew job. The wooden case is very pretty, probably walnut; it also has a bit of a home-brew or after-market look to it, mostly because the mounting brackets that secure the chassis to the wooden case look cheesey and poorly done. The back of the wooden case is wide open (i.e. the case has no back) exposing the chassis, tubes, transformers, and tuning apparatus.

The whole thing has the look of a tuner that was sold as a working electronic chassis, leaving the buyer to provide the case and electrical hookup.

This is a fascinating device, but I have not been able to learn much about it.

Has anyone heard of Fletcher Munson, or the MX100 FM Multiplex Tuner? Is this unit worth rehabilitating and putting into use again?

Thanks!

Well, this may or may not be a problem. How did you measure this voltage? If you just stuck a DVM from chassis to earth, this could be a normal reading. If you put a 'body model' network from chassis to earth and still see this kind of voltage, then there is something wrong. Typically, there is a capacitor from line to chassis in the set, and this will raise the chassis to the voltage of the line the cap is connected to, depending on the orientation of the line cord plug in the outlet. Thus the chassis may be at 120V or about 0V. If you place 1K from chassis to earth and measure more than 5VAC across it, I would look into it. If the voltage is less than 1VAC it is probably normal.

This is a common problem with Hallicrafters especially with the S-38 series which didn't even have a power transformer.

I have the same problem with my SX-99 which does have a power transformer. I did ground it and immediately noticed about a 3-5 dB reduction in signal strength.. In any case, Now I just have a 60' wire antenna, no ground and I keep it's metal case away from all of my other rigs that are grounded.

So your not alone.

Interestingly enough, had a slightly different problem with all my Hammarlunds. They all had low level 60 cycle audio hum which went away when the chassis was grounded.

Hope that helps - WD0HCO

I have a Motorola portable (Model 41D) that used an Eveready Mini-Max No. 729, A and B battery. I am building a little power supply that runs on a couple of D-cells to replace it. For completeness, I would like a data sheet on the original battery.

Anyone have the data sheet? I have an empty box so I know the voltages and the connector pin-out, but not the capacity.

TIA,

Steve

Hi,

Thanks for reading this.

I have a Collins filter which I don't know for what receiver it was made for.

On the label it's printed:

Mechanical Filter
F 500 Z 4 7021
526 9377 00

The filter is cylindric, about 55mm long and 11mm in diameter.

Any info regarding this filter will be most welcome. It's in perfect condition and I'm thinking of selling it, or auction it on eBay.

Thanks in advance for your help!

Does anyone out there know if there was more than one version of this particular unit manufactured, under the same model number?

I built a couple from kits, and both were identical. However, I recently came across one that was seemingly distinctively different in the circuitry. When looking at the manual from the ones I had built, the differences jumped out immediately. The parts layout alone was not the same. I didn't check all the tubes for exact cross match but they too seemed different. Maybe upon a closer investigation I may find that this thing was radically modified from it's original format. I do know there was a modification made to the unit, but what was done, should not have required what I have seen. Some one had installed a Wall type outlet in the side of the case and labeled it "IBM CLOCK TEST" At a quick glance, it appears to be nothing more than an extension of the 110 volt input into the Signal Generator controlled by the on/off switch.

I didn't pay a lot of attention to the chassis, but it did appear on quick glance that the chassis was machined for the differences. If the factory didn't do it, then someone did a pretty decent job of it.

The only problems I noticed with this unit, which is why I took it apart in the first place are:

1. the audio seemed to die out after a short time, "sometimes". I found the lite bulb and/or socket appeared to be at fault there. I've not yet corrected this.

2. The purity of the waveform. It's not as pure as it should be but is useable if the need isn't "real" picky as to purity. I'm going according to the displays as shown in my manual as well as those I had with the ones I built, as seen on a scope. The sine wave definately isn't as clean as it could/should be. I haven't decided yet whether I want to try to clean this up or just sell the unit as is. Personally, I have no real use for it. I got it in with a box of items on a deal. But I did want to satisfy my curiousity of the model version(s).

Thanks in advance for your input.

Please e-mail directly, as I don't always get to check the newsgroups.

I just stuck a DVM from chassis to ground. I changed orientation of
the plug in the wall socket, and still read voltage, if that makes a
difference, I will however stick 1k across the chassis to earth and
see what happens.

Thanks..

They way I look at it, you probably shouldn't be getting shocked by
touching chassis and ground?

PR

Why do you say that the Super Pro 400 was more primitive? Comparing the schematic shows that the Super Pro was the same, with a couple of avc differences , as the BC779. Oh, the upper range on the 400 was 30 MHz verses 20 MHz for some of the BC779's.

I have a stock BC779 with no mods at all. Great sound, but the audio for the 400 is the same.

Just in case this *ISN'T* what you think, I'd recommend a very big
1k resistor. Dissipation could reach 14.4 watts depending on
failure mode. 1/8 watt resistors would flame away and 2 to 4
watt resistors would become "hand branders" real quick.

Chuck

Hi,
I think it is the SSB filter (I can't tell whether it is USB or LSB) used
in R-1051 receiver with 500 KHZ IF frequency. I will look up the Filter book
tomorrow and let you know.
Good luck!

Hi,
It is used in Collins Aircraft transceiver, Model 618T series , USB 2.7 KHZ
badwidth, possible to be used for 51J4 receiver but the BFO frequency has
to be exactly 500 KHZ. The rsonant capacitance is 130PF.
Good luck.

What seems to be the problem? Why spend your time slamming Dee? No, I don't know Dee but I did get the chance to speak with him for the first time in Richmond, where he had his work on display. His work was nothing less than fantastic and if I had a Valiant or Ranger cabinet that needed refinishing, you could bet your boots that Dee would get it. I bet you same people that have nothing better to do than price police on the internet don't give a hoot about your high taxes, utilities and food bills. Why don't you divert your negative unnecessary comments (about something you obviously know nothing about) and reroute them to our Bozos in Congress. There is a big difference between NEED and WANT. I perfer slamming those who rip us off on things we need.

It quite simple actually, and was standard on the 200, as well as other radios of the era. From the SP-200 manual.

"The high voltage rectifier in the power supply is a 5Z3 connected in a full wave circuit with a two-section filter consisting of 32 mf. capacity and a 15 henry filter choke. The field of the speaker serves as a second filter choke in standard model receivers. In special models, a choke is mounted in the power supply to take the place of the speaker field."

A schematic is available at

http://www.thebizlink.com/am/sp200ps.jpg

The speaker field coil is not required in the SP-400 supply (or at least the one I own), as a choke is supplied. An SP-200, I previously owned, required the field coil.

My guess is BC-779s and 1004s came standard with the choke, thus no field coil was required. Whether the power supply is internal or external is irrelevent to the use of the field coil.

Does anyone have any experience with this antenna? I wonder if the problems experienced by R-7000 owners with water getting into the traps also occur with the R-6000. I've heard that the SWR skyrockets on certain bands on some R-7000s when it rains. Any insights would be appreciated. Thanks.

>please. (I wish I had a digital camera/scanner for a picture). Make ur
>offer, Tnx, Joe WS0E, 65714, MO.

Hey, I have one FS, too!

For sale or trade:

"ITT Mackey Marine Reserve Transmitter Type 2017A
405-535 kHz, 40W output, A2 emission"

Almost new condition except for some scratches on the top of
the chassis (probably from rack mounting).

Crystal-controlled with the following frequencies:
425, 454, 468, 480, 500 kHz (all in A2!)

Front panel: Antenna tuning controls (course and fine), 0-5 amp
antenna current meter, channel selector.

This transmitter is solid state.

Asking $395 plus shipping from Minden NV 89423 (shipping should
be around $30 via USPS), or trade for a rotating light beacon
to be used in a lighthouse restoration project. Something a bit
smaller than an airport beacon would be fine.

73, Jeff KH6O

2571. Military Radio Display (Australia)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-11 00:00:00 UTC
From: robinson@srsuna.shlrc.mq.edu.au
Message-ID: <8805apoij3@sunb.ocs.mq.edu.au>
Source record: 71358

Hi All,

The Castle Hill Military Radio Collection will have a stand at
the Annual Wyong Field Day. Ian O'Toole will be displaying several items.

- R1051 HF receiver digitally tuned, US Navy (Cold War, 1964)
- BC-221 (Aust) heterodyne frequency meter (WW2) (Brand new condition,
canvas cover, 12VDC/240VAC factory supply)
- Wireless Set No.58 (Canadian) HF backpack transceiver (1943)
- CM11 (Canadian Marconi) HF Canadian Navy transmitter (1942)
- IFF Mk3 ground receiver VHF, British Army (WW2)
- IFF responsor VHF, British Army (WW2)
- Eddystone 1680 HF fixed receiver (1983)
- TR1196 4 channel HF transceiver R.A.F. (WW2)
- Wavemeter for TR1143 (UK predecessor of the SCR-522) (WW2)
- TT4A teleprinter US Army (2 working with a Model 28 tape reader)
- RA329 digitally tuned wadley loop HF receiver, English (1969)

The Central Coast Field Day is held at Wyong Racecouse, Wyong,
New South Wales, Australia, on 27 February 2000, gates open 8:30AM.
Wyong is midway between Sydney and Newcastle on the East coast
of Australia, attracts 2000 people, and is the biggest Hamfest
in these parts. It offers new gear, old gear, displays and fox hunts.

While I don't expect to see many faraway visitors, drop in if you
are in the area.
Keeping the valves glowing in Australia.

Regards
Ray VK2ILV

Source record: 71367

Ok, so it's probably not really the oldest. But it's the oldest piece
of coax I've ever seen. Have a look at:

http://home.nc.rr.com/thehallway/images/coax.jpg

This is a piece of RG-8 coax I found in a box, and the date stamped
into the coax jacket is July 1944. That got me to wondering - when was
coaxial cable first made available for sale? Wonder what a foot of
RG-8 cost back in 1944?
73,
Doug, KF4KL

2581. Re: World's oldest coax cable

I have good clean, detailed, cover to cover photocopies of the collins
75A4 manual. $15.00/shipped.
Thank You
Gary
gbrown@mint.net

Also have photocopies of:
Hallicrafters, Heathkit, Hammarlund and many others.

2583. Question: Heath DX-40 plate current meter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-11 00:00:00 UTC

Question for you vintage Heathkit guys...

Is the plate current meter from a DX-35 the same as the one used on the DX-40? I have a DX-40 with an incorrect meter, and I have a working DX-35 meter. Are they the same one?

73,
Dean / K5DH

Hi
What is the reason(s) you feel the sp400 is economy. I cant see where they cheapened up anything. it looks the same on the inside as well as outside except for the frequency range and knobs.
I would sure like to have you input.
Thanks
Steve
k2pts
my hammarlunds are HQ120X, 129X, 140X, 150, three SP400X

I've used the R6000 for a little less than 1 year. I have no problems with trap arcing etc even when running 1KW (AMP Supply 450 ZC).

However the bandwidth on 20 changes when it rains. It is still resonant at 14.20 but the VSWR at either end goes up to about 2.2 to 1 from 1.5 to 1.

The other bands do NOT exhibit this special "feature".

Deacon Dave, W1MCE

Donald Young wrote:

This group is getting corrupted by Ego trips. Come on fellows, lets have respect for one anothers beliefs and not try to antagonize each other. i use Ebay both to sell and to buy. You have to admit there are some really nice units coming out of closets and dark places that wouldn't ordinarily. Lets use this to our advantage and not fight it. It's here. You don't have to buy something if it reachs a high price. Stick around and you will probably get another chance. If I list something overpriced I have 10 guys down my throat trying to degrade me. We don't need that fellows. If you don't want to pay the price then ignore it and go on your way. Why try to make trouble. Sometimes when you open your mouth you show how uneducated you really are. Sorry!!! MY TWO CENTS!!!

2597. Heath SB-220 repair question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-11 00:00:00 UTC
From: Nat Davis <ndavis@vt.edu>
Message-ID: <38A47724.A8B42D21@vt.edu>
Source record: 71384
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have an opportunity to purchase an SB-220 amp. It is in fair to good condition to look at but it definitely shows that it has been used. It also needs some repairs: the output band switch wafer has been arced pretty badly -- to the point that I would not try to use the amp before repairs (even though 10m is the only band where it truly does not seem to work). I am told it could use a new set of 3-500s, too (low power out with current ones). I would add some of the "Harbach" mods while I am at it -- parasitic suppression and new power supply capacitors as a start ...

Any suggestions on replacing the switch wafer? Looks like I would need to remove surrounding components just to get to it. A bit of a pain! Other suggestions?

What would be a reasonable price to offer for the amp as a "fixer upper?"

Thanks,

Nat
N4EL

OK, stupid question.

I thinking about an SB-40x (either a 400 or 401). While tranceivers of this era had external power supplies and I know the matching receivers (SB-300, 301, 313(swl)) had built in power supply. Does the SB-40x have a built in power supply or does it need a HP-23(x) power supply?

2599. FS: Audio load resistors

LOAD RESISTORS for testing audio amplifiers:

I can supply you with 200 Watt loads - either 4 ohm, 8 ohm, or 16
ohm resistive loads as follows:

Each set-up would consist of FOUR 50 Watt resistors wired for the
correct load impedence.
These are brand new DALE Gold Series (the best resistors you can get!)
Each set-up rated for 200 Watts would cost $25.00 plus shipping.

I can also supply these as 100 watt loads in either 8 ohms or 16 ohms,
for $15.00 each, plus shipping

I've moved my "Tom's Online Garage Sale". I merged it with one of my "other" websites. There's a ton of stuff that I'm selling, like capacitors, tubes, sockets, vacuum relays, and tons of other stuff that I just don't have room for. Go to;

http://members.aol.com/ecc81

Also, I listed a whole bunch of capacitors on eBay last weekend. No reserve, most opening bids are $0.50 for the entire lot, some of them have opening bids of $0.01, just because I WANT MY GARAGE BACK! Auctions close this weekend (some Saturday, some Sunday)! To see the whole list, go to;

http://cgi3.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=over-reactor

Here are the lots that I'm auctioning off;

(40) 1800 uF 16 V axial capacitors
(75) 2000 uF 12 V General Instruments axial capacitors
(120) 175 uF 15 V axial capacitors
(2700) 5 uF 12 V General Instruments axial capacitors
(100) 150 uF 25 V axial capacitors
(75) 10 uF 10 V non-polar axial capacitors
(100) 150 uF 35 V RCA/Mallory radial capacitors
(40) 1800 uF 16 V axial capacitors
(200) 33 uF 16 V radial capacitors
(100) 68 uF 16 V Elna radial capacitors
(100) 1200 uF 20 V radial capacitors
(425) 47 uF 40 V radial capacitors
(120) 47 uF 16 V radial capacitors
(300) 150 uF 15 V RCA/Mallory radial capacitors
(75) 200 uF 6 V Ducati axial capacitors
(150) 5 uF 3 V non-polar General Instruments axial capacitors
(75) 50 uF 20 V General Instruments axial capacitors
(50) 30 uF 60 V Mallory axial capacitors
(190) 330 uF 16 V Nichicon axial capacitors
(125) 220 uF 16 V ICC axial capacitors
(75) 20 uF 100 V Mallory axial capacitors
(350) 25 uF 10 V radial capacitors
(150) 25 uF 15 V axial capacitors
(44) 100 uF 63 V United Chemi-con radial capacitors
(90) 10 uF 25 V axial capacitors
(100) 22 uF 35 V radial capacitors
(240) 25 uF 3 V Ducati axial capacitors
(400) 200 uF 6 V axial capacitors
(600) 25 uF 15 V Mallory radial capacitors
(180) 100 uF 15 V Mallory axial capacitors

2611. FS - 125 Watt Stancor Universal Modulation Transformer

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-12 00:00:00 UTC
From: Rye Gewalt <ryeg@vais.net>
Message-ID: <38A58211.A16ACFFE@vais.net>
Source record: 71197

CLOSING TODAY on EBay !!!

If anybody needs a nice universal modulation transformer, I have a nice one up on Ebay. It's a Stancor Polypedence unit which means that it has several primary and secondary windings which are designed to be put in series or parallel to match many different modulator/final configurations.

It's at
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=254298064

and a picture with schematic is at
http://www.vais.net/~ryeg/StancorMod.jpg

Somebody out there must want to relive their youth with a nice 100% modulated carrier. I've given up on ever doing that so I want this to have a new home before my kids sell it for junk at an estate sale.

These are really hard to find!

Regards
Rye K9LCJ

Have for sale a R.L. Drake L7 with matching L7p/s power supply. Match to the ever famous Drake 7 line. - 160-10 meters - 1500 watts+ output. Low hours on tubes - Eimac - excellent condition. Would rate it a 9 on a scale of 1-10. I am the second owner. Non-smoker radio. Original factory manual. JPEG's available upon e-mail request. Professional packing available. $1000.00 plus shipping.
73 de Dave K4DLJ Darlington, SC

The "1N", means that the semiconductor has 1 Negative part in the substrate,
"2N" then means 2 negative parts to the component.

2620. FS: Grundig Yacht Bob 400PE portable receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-12 00:00:00 UTC
From: Brian Harrison <bharrison@apple.com>
Message-ID: <B4CAFF0B.64F3%bharrison@apple.com>
Source record: 71206

Hello, and thanks for reading:

I have an almost new Grundig Yacht Bob 400PE portable receiver for sale.
This radio was purchased for a nephew who was to go overseas with the Peace
Corps, but ultimately didn't - used very little, maybe 5 hours.
Works very well, though...

See the latest Amateur Electronics Supply catalog page 32, or
http://www.aesham.com

Covers 1.6 to 30 MHz, all SW bands, FM broadcast band (stereo with
headphones), AM and long wave broadcast bands. Direct keypad frequency
entry or scan tuning with 40 memories, SSB reception with fine tuning
control, high-low tone switch. Tilt stand, telescoping antenna.
Multi-function backlit LCD display shows dual zone 24 hour time, frequency,
band and signal strength. Dual selectivity. Automatic turn-on and sleep
timer.

Includes external reel-up antenna for shortwave, carrying pouch, manual, and
AC adapter (otherwise uses 6 "AA" batteries, not included).

approx 4.5" height x 7.75" width x 1.3" diameter, 1.5 lbs.

I'll ship to your door (in the US) for $169.

thanks, and regards,

brian

Just a reminder to everyone, the brochures for the
Charlotte meet have been mailed (652 of them).
If you don't get one in the next few days and would
like to have one, please send me your mailing address
and I will send one to you.

You can also get a pre-registration form directly from the
CC-AWA web page, http://www.cc-awa.org

If you plan to attend the meet do yourself a favor and
pre-register, it will save you money and assure you of
getting a vendor space if you need one since there is a limited
amount of spaces available.

73,

Ron

From the "Eveready Battery Applications Engineering Data" 1971 book.
There is very short listing for the 729:
Suggested Current Range: A - 200, 250, 300 ma B - 10, 14 ma
Dimensions: Length 3 27/32, Width 2 7/32, Height 7 13/16
Cells: 3 ea size 56, 60 ea size 135
Weight: 2 lb, 7 oz
Socket: sketch 51 (four jacks) [have dimensions if needed]

Unfortunately I could not find any listing for the specified cell sizes.
But in brief playing with some numbers I came up with:
"C" cell is 1 1/32 dia, 1 31/32 long - would form a pack 3 1/8 x 2
"AAA" cell is 13/32 dia, 1 3/4 long - 6 1/8 X 1 5/8 X 1 3/4

A "AAA" cell has a suggested current range of 0 - 20 ma
Three "C" cells in parallel would have suggested current range of 0 -240
ma

Hope that this gives you some input.
Denis

Hi,
Anyone got a couple of wirewound resistors, 25k, with center tap. Need them in 2 Gonset GSB-100. They are used as voltage deviders. IRC # PW-5168 if that helps.

Thanks
Mike/WB6VSE

Even regular 6146 works just fine for any Kenwood radios.
6146 - normal old type
6146A - uses dark heater, works better when the filament voltage drops below 6V otherwise same
6146W- to be used under severe vibration like mobile radios or military, otherwise same.
6146B - has 25% more plate dissipation otherwise same
S2001 - exact copy of 6146B by Japanese companies like Matsushita(Panasonic) and NEC and Hitachi. In my experience, it is not as rugged as 6146B.

Good luck.

Hi,
Amazing how a simple statement can become so complicated.
Matt Erickson wrote:

>The "1N", means that the semiconductor has 1 Negative part in the substrate,
>"2N" then means 2 negative parts to the component.

The numbering scheme came first: 1N21s were being made in 1941,
and, incidentally, of p-type silicon. (ref: "Engineering and Science
in the Bell System," Physical Sciences [vol.4], 1983, pp.415-417. The
designations n and p were applied by Scaff and Ohl at Bell Labs: refer
to their paper in the Bell System Technical Journal in January 1947.

I have a listing of JAN vacuum tubes as of 30 June 1945, which
includes the 1N21 through 1N31. Note, they were considered vacuum
tubes for numbering purposes.

I do not have a good account of early transistor numbering schemes
handy, but those began with 2N21. By the RMA scheme, which has
already been given here, "2N" would have referred to a crystal
rectifier with a heater of up to 10 watts, and needless to say, no
such numbers had been assigned, so there was nothing preventing their
use on transistors. More than one observer has lamented that
transistors were not labelled '2N' and "2P" but they were not, which
indicates that the distinction between N and P did not matter much at
the time.

Betcher ass it did - had to carry the 100 pound sonofabitch about a half mile to the car (thankfully I had help) then pull the 30 pound power supply out so the components would barely make the 70 pound APO limit.

When are ya gonna get your Globe King on the air? I got some checking to do; wanna make sure the bias supply in the RF deck is working OK so I don't melt down my V70Ds. Mine is different - has an 807 driver instead of a 2E26. SOme circuitry differences too.

Yea... I have to agree. I don't think I want any part of that gear.
The receivers might be of use if I can get them for $20 a piece---then I
can throw them away or float test them when they quit working (yea
sure... go ahead and try to fix one!) really, any Ham or SWL receiver
can run rings around them.

I wouldn't mind having the clock with the radiotelegraph and
radiotelphone silent period arcs and the auto-alarm dashes---just for
show (all the clocks I used kept poor time)---I mean, like, how many
hours did I stare at them while listening to static on 500 as the ship
rolled for lack of anything better to do.

I guess for a homebrew emergency power supply those NiCad batteries
would be a nice catch but go ahead and try to lift one out of the
battery locker without busting a nut---I think they were brought in by
shore crane then the enclosure was welded around it.

I guess the only thing worth having is the straight key (Nye Viking
SpeedX)---the one with the blue protective box cover with the ITT
equipment label on top.

Best regards,
R/O
......

Source record: 71262

I have 2 National NCX-3s laying here doing nothing. The first one was working, but hasn't been turned on for maybe 10 years. The front panel is good, but the cabinet was repainted in black. The dial slips. Overall condition is good, maybe a 7.5 or 8 out of 10.

The other is a parts unit, although it looks complete. The cabinet is dirty, but should clean up OK. It is in the original color. The dial works OK on this one. I never powered it up, as I picked this up at a yard sale.

I don't have a power supply or manual for these. Hopefully, someone who has spent time with these can put them to good use. I would like to get $100.00 for the pair, plus shipping from Pennsylvania. Please e-mail me if interested or you have questions. Thanks for reading.

2662. Tube replacements

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-12 00:00:00 UTC
From: vk2wl@midcoast.COM.AU
Message-ID: <200002120122.MAA19207@ecpport2.midcoast.com.au>
Source record: 71266

Have cooked a set of S2001A's in my Kenwood TS720. (A wire snapped off in a
socket in the Bias line circuitry).
From what I can determine the S2001A is a heavy dury 6146 which has better
heat dissipation qualities.
Which leads me to the 64 dollar question : Has anybody tried replacing S2001A's
with ordinary 6146's and, if so, did they handle the task well enough ??
Thanks for your reply, if any !!!
Ted. VK2WL

My Father (W3CRS) had hardline he used in the 30's.
It was a VERY interesting design.
Ceramic buttons crimped in place on the copper pipe center conductor.
The Center conductor (and buttons) all pulled out of the copper outside
pipe as one peice!

Will and willingness.-- Someone took a youth to a sage and said:
"Look, he is being corrupted by women." The sage shook his head and
smiled. "It is men," said he, "that corrupt women; and all the
failings of women should be atoned by and improved in men. For it
is man who creates for himself the image of woman, and woman forms
herself according to this image."

These things are going to be all over the place as main and reserve MF
CW transmitters are being pulled off of ships. They've been replaced
with GMDSS equipment.

Guess you might want them as a collectible but they're useless for
putting on the air. The main MF Mackay transmitters use two 813's
with a link coupled tank circuit. They'd have to be totally rebuilt to

use on another band. Plus, their power supply is probably missing since it was console mounted and used to power two or three different transmitters in the console.

The solid state reserve transmitters run off of 12V and have a built in dummy load,. Thus they are useful for heating up that load resister and supplying the surrounding room with 40 watts worth of heat.

:-)

2684. Drake 1-A variations?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-12 00:00:00 UTC
From: LA8AK@online.no
Message-ID: <38a5644e.508421776@news.online.no>
Source record: 71288

posted the scanned gif-files to K4XL for the Bama site at
http://bama.sbc.edu

it is 3 different circuit

Drake 1-A - poor quality dawing
Drake 1-A Rev.2 - serial numbers 453-up, good quality
Drake 2-A - fair quality

have some questions regarding the 1-A. One version uses V9=6BF6 (AGC AMP/RECT) while Rev.No.2 has V9=6BJ8 with an extra clamp function, AGC-1 voltage is limited to -15V.
Since S-9 (for 2-B) is around -9V, quite strong signal i needed to increase the AGC voltage up to 15V, and 6BZ6 has sharper cutoff than 6BA6, but for strong signals (from signal generator - with 2-B) AGC voltage may increase to -20V

my question is if the receiver using 6BJ8 is an older model than the one using 6BF6 (like 2-A and 2-B)? Only the circuit using 6BJ8 has a note that it is Rev.2

Any serial numbers for sets using 6BJ8?

FOR SALE:

ARRL Handbooks:
(All in excellent condition)
1991 Hardbound - $16.00

1964 Paperback - $14.00
1975 Paperback - $10.00
1978 Paperback - $10.00

ARRL Textbook: "Your Gateway to Packet Radio", paperback.
Excellent $7.00

Drake DC-3 power supply for use with 3-Line and 4-Line rigs like the TR-4, TR-3 etc. This power supply runs on 12V DC from a car battery and will produce all necessary voltages for the radios. Very good working condition. Comes complete with all cables, including speaker output connector. Will sell for $45.00

Waters CO-AX switch, 2-positions, round - with SO-239 connectors. Coaxial transfer switch model 336. Includes two mounting brackets, and

original knob.
Will sell for $15.00

TVI Filter: B&W Low pass filter type 425. Uses SO-239 connectors
Very good condition. Will sell for $15.00

Yaesu Landliner Loudspeaker / phone patch for FT-101 series transceivers.
Will also work with umerous other rigs. Includes original connecting cables.
Very good condition. . Will sell for $45.00

Military Loudspeaker, type LS-454/U in very good condition with connecting cable.
Will sell for $15.00

Astatic D-104 microphone, very good condition with nice chrome PTT stand.
Has the gray base, and cable. Will sell for $42.00

One 1/4 wave magnetic mount 2m FM mobile antenna. Almost new. Used only about 2 months. Will sell for $10.00

Heath HP-23A power supply - very good condition. Has settings for BIAS adjust, and

LV switchable 250V to 300V DC. Use with the HW and SB series Heath rigs etc.
Has 6.3V heater supply needed by Collins. Many hams use these with Collins
rigs too. Will include the Heath Tech Bulletins and notes on how to use
these with Collins radio equipment. Will sell for $95.00

MFJ 484-B Grand Master Memory Keyer. Has 4 memories for
excellent CW. This keyer includes the AC power supply
for 120V AC operation, and is in very good
working condition. MANUAL included. Will sell for $70.00

Ham Radio Center CW Keyer Has Spee, Weight, Tone and Volume controls,
plus direct and grid-block keying outputs. Tuns on battery or external
AC adaptor (not included.)
Attractive silver and black case. Very good condition.
Will sell for $26.00

SHIPPING ADDITIONAL

2699. FS: Zenith Trans-Oceanic, RME & Hallicrafters radios

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-13 00:00:00 UTC
From: Radios_R_Me@yahoo.com
Message-ID: <38a5fbcf.22784268@news.earthlink.net>
Source record: 71147
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.antiques.radio+phono

FOR SALE:

Zenith Trans-Oceanic receiver, 600 series. Excellent condition.
One of the nicer looking Trans-O's I have seen. Recently returbed,
and includes two spare tubes.
Telescoping antenna intact and in very good shape. Also has the
built-in wavemagnet antenna and connecting cable. The black vinyl
looks extremely good. This unit works beautifully and shows well.
Has the four red slide-switches below the dial for Treble, Voice,
Alto and Bass. There are seven push-button bands covering the
AM Broadcast Band, 2-4 Mc., 4-8 Mc., 16m, 19m, 25m and 31m
shortwave bands. Some very minor surface corrosion on the front
cover-lift handle.
Will sell for $135.00

RME-45 receiver
Case needs painting, as there are some scratches consistent with the
age of
this radio (1947) under normal use. Covers 540 kHz to 33 MHz.
Comes with the complete SAMS Photofact including schematic and all
service
information. Open design makes this receiver easy to work on.
This receiver uses loctal tubes and has a two speed dial with
concentric knobs.
Front panel looks excellent, but rig needs some minor repair. All
parts and
original knobs are present.
Will sell for $220.00

Hallicrafters SX-24 Defiant receiver. Needs some work, but is an
excellent
candidate for total restoration to museum quality. No dings or dents.
Needs s-meter. Original S-meter not present but has NICE Hallicrafters
SX-99
S-meter in place. The set has a missing output transformer (common
single ended 6V6 or
7C5 type), but appears to be complete and could be made to work with
minor repair.
Has all original knobs and the front panel shows well. The cabinet has
the
cool-looking louvres on the sides, which match the speaker used with
both the
SX-24 and SX-28 series. If you already have the speaker it will look
really

great with this radio. Will sell for $185.00

Hallicrafters SR-160 HF transceiver covers 80-40-20 meters SSB and CW.
Beautifully built, heavy duty station, complete with original
PS-150-120
power supply/speaker unit, all in excellent condition.
This complete station also includes hand microphone and all cables.
Add only your antenna. Will sell all for $225.00

Hallicrafters S-38 receiver. Some surface rust on chassis. Front panel
looks good,
all original knobs. Front panel is very good. Everything is there,
just needs a
little TLC. Will sell for $35.00

SHIPPING ADDITIONAL

2700. WTB:NC-183D Power Transformer

```
---------------------------------------------------------------------
FORSALE - MINT Icom 735 HF rig
---------------------------------------------------------------------

I have an absolutely mint condition Icom 735 HF rig that
I'd like to sell. The rig includes the optional 500-Hz
CW filter, the optional EX-243 electronic keyery,
and the original hand mike with up/down controls. I bought
the rig as a "backup" and have never used it (other then to test it
out for about 1 hour). It's like new. I also have the original box and
manual. It's also ALWAYs been in a smoke free environment.

ICOM 735/cw filter/elec keyer/mic $575.

Guaranteed that you'll like it.

This is somewhat like saying that it is ok to call yourself the
President of the United States, because you are not in a situation
where the actual President would be required to identify himself as
such.

Within the context of any amatuer radio venue, identfiers that are
structurally valid as amatuer radio callsigns are generally accepted
as such. You know this. Don't bother telling us about legal
loopholes. It doesn't change the fact that you are fraudulently
portraying yourself as an entity that you are not. You are neither
affiliated with station G8ASO nor with the individual responsible for
its license. Calling yourself G8ASO (especially against the voiced
wishes of its owner) is grossly unethical (whether it's actually
illegal or not).

Hi,

I have four pcs EIMAC 8252/4PR60C for sale. The valves are NOS and in original boxes. 8252 is the same as 715C and 5D21, but an upgraded version. Heater 25.5V 2.35A Pa 60W Va max 20KV Ia max 18A (pulse operation)
This valve is usually very expensive, but I'll sell it for US$ 100.-/each

I am the owner of posting title G8ASO!

There are 1 or 2 impostors here, but as they seem to generally sympathise, I am not bothered. This Cunt/Twat/Wanker is only 1 of 2 Brian Jones's posting here, which one is the real "owner" of the title?

This is not amateur radio, and as I have pointed out, G8ASO (in an amateur radio environment, which this is not!) is NOT user specific.

This Cunt/Twat/Wanker Brian Jones bajones@worcester.demon.co.uk has stated that he never uses or has used the identification G8ASO when posting to news groups, so what is the problem? This message is NOT from an amateur radio station - which should be quite obvious to the most stupid amateurs.

So, to recap, Jones is complaining about the use of a posting "handle" he has never used, WHY?

Others are complaining about it because they stupidly think it is possible to establish an amateur radio station via Internet, PULL YOURSELVES TOGETHER!

The fact that this Jones character is a complete and total twat seems to have been completely overlooked.

Try and think in a rational manner and call things as they are, not as you think they are.....you may find this good advice in other aspects of your life! Anyway, I thought imitation was the sincerest form of flattery, everyone in the LPWS seems to have been imitated at some time or other, I don't remember any of us getting upset about it.

If you have read this far, then you might as well visit the home page site at http://www.laughingpoliceman.com

G8ASO The real one!

Hi,

I got a lot of these - about 75 - 80 I think. They have a B7G socket
and is about the same size as a 6AQ5 valve. All metal. Yellow colour.
The label says:
IF AMPLIFIER AM-427 A/U
FISHER RADIO CORPORATION
U.S.

They are new (or rather unused) and in original boxes. I really don't
need them myself, but maybe there is anyone out there who do?
E-mail me if interested.

What you heard were complaints about an arbitrary fence that the FCC has considered obsolete for quite some time.

What I'm hearing now are a bunch of petulant crybabies screaming that "it ain't fair!" when someone else gets something without having to jump through the same hoops that you had to.

If you don't see the difference, then I can't explain it to you.

2728. FS: 160 & 80 meter (4)572B amp $325.00

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-13 00:00:00 UTC
From: Lane Ku7i <Ku7i@worldnet.att.net>
Message-ID: <9LAp4.9123$%M5.192626@bgtnsc06-news.ops.worldnet.att.net>
Source record: 71176
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

This used to be a stock Hunter Bandit 2000A hf amp. Runs four 572Bs. Power out is 1100 watts on 160 and 80. Modified to work only on 160 and 80 meters. This is a tinkerer's amp. I have not installed the vacuum relay (Jennings and included) to allow automatic switching btwn 160 and 80. This will switch in the extra Tune Cap padders for 160. The way it is now you need to go in and manually change a strap for either 160 or 80 meters. The bandswitch is modified to select 160 low or 160 high and 80 low and 80 high. The plate idling current is abt 300mA so you will need to go in and fix the zero signal anode current and get it back down to abt 100mA at idle. Probably the resistor blew out. I have been using this amp daily on 160. I ran an additional muffin fan on the top of the unit so if I was not going to be xmitting for a few minutes I would turn the amp off but the tubes would be kept cool with the external muffin fan. After a few minutes of drawing 300ma the tubes do show color. This helped the tubes. 100 watts in gives 1100 out. Same for 80. Plate voltage is 2500 at idle and drops to 2200 under load at 1 amp of plate current. Wired for 240 but can swap it back to 120. The high voltage has a total of three taps. 2500, 2100, 1800 vdc (approximate) so you could drop in some 811As if you wanted to. I have two manuals for this with complete parts list and schematics.

Comes with four US made 572Bs which are a mix of brands, some Cetron, some ??. No chinese tubes, all American. This is a neat amp. I am also including a spare bandswitch identical to the original which has six positions so if you are feeling froggy you could turn it into a six band amp covering 160 to 10 meters or a REAL low band special covering 160H, 160L, 80H, 80L, 40H, and 40L.

Cosmetics are fair. Front panel not trashed but this thing is 30+ years old. I will pack it very well and ship the tubes seperately double boxed.

Price for the amp with tubes is $325.00 and it you do not need the tubes I will sell it for $225.00. I will not sell the tubes by themselves, even after the amp is sold since I have other amps that use these tubes.

BTW I used really nice 5kv transmit type doorknobs for the tune and load padders which are NOT cheap.

Buyer covers UPS charges on 50 pounds from San Diego 92139.

Hello Fellow AM'rs
I have a completely refurbes Valiant-1 that needs a home> Will have 2 more Valiants done soon. I presently am enjoying talking on it @ the shop qth almost daily on 29meg & sometimes on 7290 (+-). I get excellant audio reports. The audio has been re-built per a well used, slightly modified plan out of ER magazine (mabe #24 or #25 "Curing the Valiant sound") + all necessary mods, updates that stabilize the power supply & rf. On every radio I overhaul I start w / giving it a bath so that it is the best it can be inside & out. The crowning finish is a total cabinet / panel regeneration (looks new). PRICE: $750. You probably have questions about the radio so feel free to ask.
One condition: UNDER NO CIRCUMSTANCES WILL I SHIP! Please dont ask. I will deliver within reasonable distance for cost of gasoline & expences. Will deliver free out to 200mi. Better you come get it (see it operate & try it yourself) at my shop qth near Harrisonburg, Virginia, just off I-81 or I-64 in the Shenandoah Valley.
I will take trades toward the price of the radio. I might add I will do this for any panel / cabinet refinishing that I also do. I will trade for; Rangers, Hammarlund HQ-180, amplifiers, tube audio amps, etc. In another catagory, American pocket watches RAILROAD GRADE, pocket dress watches 17 jewel or better "hunting case" prefered (flip cover over dial), certain 17 jewel or better wrist watches such as; Omega, Rolex, certain others, and earliier American, certain clocks & music boxes, musical anamated stuff (bird cages, etc).
Warm regards to you all...

I don't think so. Obsolete is not the question. It is an authorized mode for ham radio. If obsolescence is an issue, then AM, RTTY, SlowScan and many other modes should be removed from the amateur service and the questions dropped. The way technology is going, packet and many of the relatively new modes should be outlawed as well.
The thing that bothers most of us, especially extras, is the cry baby attitude concerning the whole issue from the people who want to work as little as possible to get what others have. I liken this to the welfare mentality I see rampant in society today. If you ever had to work like I and many others did to attain something worthwhile I guess YOU would understand what we feel. Obviously you don't!
Then when all our hard work is thrown out the window, you wonder why people scream? Are you sure your thinking cap is on right?? Or are you so far removed from reality that it doesn't make sense?
Certainly some of the rhetoric on BOTH sides has been absurd, but the anti-code side has been just as whiney. That was my point.
Then the thing that really makes me wonder about the intelligence of some members of our hobby, is if I make even a little stink about this, I'm made out to be some kind of arrogant exclusionist trying to keep everyone else from enjoying ham radio. NOT! I accomplished it, so can anyone else who puts in the effort. Now certainly the lowering of the cw requirement may have been timely, but 5 wpm? only time will tell.
I personally don't think this or even a dropping of cw will save ham radio. This present move by the FCC, will only encourage licensed hams to upgrade. I hardly think hardcore CB'ers are going to flock to our ranks, with the exception of those who will become good op's, maybe some others who disliked cw, but not in droves!
Interestingly enough, I was for the lowering of the cw requirement for general and advanced, maybe even extra to something I felt was more reasonable, 10 wpm maybe. But 5 wpm? As a VE, I had to pass a guy who recorded the dots and dashes onto a paper, then he transposed them to the corresponding words. Everyone in my VE team felt that the rules didn't say that it was wrong, but it sure didn't show any proficiency! I had to pass the guy, I didn't like it though.
As I said, only time will tell what will happen, but I for one think that this move by the FCC will not have the desired effect of growing ham radio, nor do I think that the new upgrades will pollute the extra class bands.

You are screaming as if you lost some privileges - you didn't. I was required to take my driver's license on a stick-shift. That is no longer a requirement. Do you hear me screaming about that? Things change - progress happens in all fields - even ham radio.

> I accomplished it, so can anyone else who puts in the effort.

I have a Wilcox 96D transmitter for sale. 1953 built. This is the one
with the works in a drawer slide out cabinet. Tall and narrow.
Has two 250THs in it now but two 450THs can be used. Excellent design
with large Jennings Vac variable. No power supply.
It is in very nice condition. I have JPGs on request.
$650 pick up or you crate from FtLauderdale Florida.

For Sale: Heath DX60A and VF1 VFO w/manuals (DX60 is copy). $115 + shipping

Just bought a Ranger and need to make room in the shack, so I need to sell my Heath DX60A and VF1. The DX60A is in excellent shape, all original, no mods as far as I know. A few scratches on cabinet. I've been using it on CW for the past dozen or so years and it works great. I've never tried AM with it. The VF1 is in good condition, but I've never used it and don't know its operational condition.

Located in Western WI.

Source record: 71046
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Got a big bunch of tubes this weekend, and there were three very old German tubes in there, still in their original boxes with data sheets (written in German, of course). I'm hoping someone can give me some idea of use and age. They have odd bases on them. Given the company they were in , I would guess they are from the early 30's or maybe late 20's. They are:

Telefunken AF3
Telefunken AZ1
Valvo ABC1

Thanks for any help.

Dave

Pittsburgh PA --

I grew up in Pittsburgh PA, and there was a place called "Tydings Electronics". I got my novice transmitter there, a B&W 5100B. They had a nice collection of old gear etc. They were on Liberty Ave, but I seem to recall they relocated to Penn Ave. In any event, I haven't been in there since the mid 1970s.

Fort Wayne IN --

Pembletons Electronics. Right near the old Magnavox Technical Center, now the Raytheon Technical center, right off of I69 at the Lima Rd. exit. Was in there as late as last July. Never saw any ham gear, but had parts galore. Way easy to kill a lunch hour...

Hi all. How many of you have a hundred radios sitting around and your working on half of them and that multi band S.W. receiver that your working on has stubborn sensitivity above 15mhz that just won't quite cut it and your just tired of messing with it. In my case I have an SX-42, NC-183 that the band switches are a problem and any of you guys that have gone blind and insane like me restoring SX-42s and SX-28s know what a pain the band switches can be and now an S-38 that I just restored is giving me problems and a couple others. I feel like Im jinxed!! The upper band switch Gremlins are after me!!! Well at least the 38s switch is small :)

I have (best offer -- AND you pick up in Delaware) the following:

Western Union (teletype) floor model printer/keyboard model 28
Worked -- hasn't been used for 3-5 years. wired for 60ma
with gears for 100 wpm (I may even have 60 wpm gear)

Teletype table top printer/keyboard model 28 (uses model 32 keyboard)
gear shift for 60/100 wpm
was a "bolt down" shipboard unit.
Worked -- hasn't been used for 3-5 years. wired for 60ma. GREAT portable unit.

1 and 2 part paper 12-15 rolls

I may be even able to find the extra print heads for weather reports...
I have manuals, don't remember if they are exact, but if you buy
you will get what I have.

: Then when all our hard work is thrown out the window, you wonder why
: people scream? Are you sure your thinking cap is on right?? Or are you
: so far removed from reality that it doesn't make sense?

Why was all your "hard work thrown out the window"? You still can copy and send 20+ wpm on CW - I hope. Many extras cannot do that any more, as many of them have seldom been on CW since they got their rating.

Just get on the CW segments and USE your ability to send and receive that fast. If the people with a lower speed capability want to talk to you, they will get their code speed up. If not, then you can gloat and brag about being better than the other extras who cannot keep up.

Just don't try to communicate with some who can copy much faster than you can - they just might make fun of you in return.

: Certainly some of the rhetoric on BOTH sides has been absurd, but
: the anti-code side has been just as whiney. That was my point.
: Then the thing that really makes me wonder about the intelligence of
: some members of our hobby, is if I make even a little stink about this,
: I'm made out to be some kind of arrogant exclusionist trying to keep
: everyone else from enjoying ham radio. NOT! I accomplished it, so can
: anyone else who puts in the effort. Now certainly the lowering of the cw
: requirement may have been timely, but 5 wpm? only time will tell.

I was in favor of 10 wpm myself. That is just about where one of the common plateaus occurs.

I don't know how many Ranger cabinets Dee has done. I do know that the one he did one for me. I had looked for some time for someone to refinish my Ranger. Dee showed me one that he had done and I immediately said, "Put me on your list." It was important to me to bring my Ranger back to its original condition since it was my first "store bought" transmitter. It worked my WAS and DXCC for me and in the process suffered a lot of bumps, skinned and worn places that no amount of "touch up" could have fixed. I happily paid $250 to bring my Ranger back to "better" than original condition. I'm not sure that I would have been willing to pay that amount if it had just been an ordinary rig that I had picked up in a deal. But for this one, it was worth it. On the rare occasion when a stranger is allowed into my Cold War bomb shelter (radio shack), the rig that catches their eye is my Ranger.

>> You are neither
>> affiliated with station G8ASO nor with the individual responsible for
>> its license. Calling yourself G8ASO (especially against the voiced
>> wishes of its owner) is grossly unethical (whether it's actually
>> illegal or not).
>
>So in your opinion ETHICS overide LAW.

In my opinion, ethics are important. As already been stated in this thread, the laws governing radio transmission are not relevant to usenet posts. So, we are left with ethics. The crux is NOT whether you CAN use someone else's station's call as your identity in a non-radio medium, but whether you SHOULD (especially if they request that you don't).

>Aircraft licences are in the same catagory as amateur licences.
>Can you imagine if every pilot took the attitude that because he happened
>to own & operate aircraft N0000 then borrowed/hired someone else's
>aircraft which happened to be registered/licenced as N9999 (note the
>aircraft is registered/licenced NOT the pilot... same it's a radio ident)
>Do you seriously expect him to mis-identify N9999 as N0000

That would be a lovely argument if your analogy resembled this situation.

Would be ok for the owner of the N0000 aircraft to wear N9999 on their jacket when they're at the local pilot hangouts and talk about things that the person who owns the N9999 aircraft ephatically does not endorse? (I'm not asking you if it's legal.) Would you like it if someone defamed you in that way?

What if i started posting as ggehring@uq.net.au (which identifies your emailbox--not you)? Would that be ok with you? You might get a bunch of e-mail that you dont want, regarding my posts--Just as the owner of G8ASO might get a lot of unwanted correspondance regarding that website--which has nothing to do with them--from folks who looked up the callsign.

This is not about law. But, perhaps that's what it takes--making the legal infrastructure yet more complex, to deal with those hell bent upon doing anything they can get away with, whether it's good for the world or not.

From: Doug_Hensley@generalhealth.ORG
Message-ID: <54096581@generalhealth.org>
Source record: 71125

A military version of the HP-180-A has problems on
it's horizontal driver board. When trying to identify
the PNP/NPN output pair, only the number 3119
shows up for the PNP. Military numbers are there
but no further reference.

If anyone is using the HP-180-A, would you kindly
check your manual and let me know what the transistor
numbers are for this board? There is also a diode.

What should the input signal level be to this board?
Is it coming from the plug-in?

Thanks in advance,

Doug

I have lost a step with age. I used to dunk it with two hands from a standing-still flat foot position. Now I need a running start and use only one hand. I've got extremely long arms, like my orangutan cousins. Put $600 of knee braces on me and I can still do it. After all, I only have to get the ball about one foot higher than just standing and holding it. And being able to palm the ball one-handed sure helps.

Source record: 71054

have (best offer) the following:

Western Union (teletype) floor model printer/keyboard model 28
Worked -- hasn't been used for 3-5 years. wired for 60ma
with gears for 100 wpm (I may even have 60 wpm gear)
-- AND you pick up in Delaware

Teletype table top printer/keyboard model 28 (uses model 32 keyboard)
gear shift for 60/100 wpm
was a "bolt down" shipboard unit.
Worked -- hasn't been used for 3-5 years. wired for 60ma. GREAT portable unit.
-- AND you pick up in Delaware or I will ship UPS (you pay).

1 and 2 part paper 12-15 rolls
-- AND you pick up in Delaware or I will ship UPS (you pay).

I may be even able to find the extra print heads for weather reports...
I have manuals, don't remember if they are exact, but if you buy
you will get what I have.

Steve, Wilmington, DE email at wb3lgc@aol.com

This is incorrect. The ABC1 is a small signal triode with two demodulator diodes, actually not unlike the 6SQ7. It was usually used to drive an AL4 output pentode.

You mistaken it with the ABL1, same diodes but 9 watts/9000 Gm output pentode...

Howdy, folks.

Got my new 160 meter dipole up and it is really making a difference for me even on other bands. 10 MHz is a really great band, and I am now on there more than in previous years. The 160 dipole works rather well for me here. So look for me, mostly CW at night, 10 meters in the daytime.

Consider getting onto 10 meters! It is hot right now. Lots of DX. The Ten Ten International club is challenging Amateurs to work 2000 contacts on 10 meters, any mode, any 10 meter frequency, in the year 2000. I've posted my current 10 meter logs on the site. See if you are in there (if ya worked me!).

A reminder:

http://cw.hfradio.org - CW / Morse Code Resource center. Lots of stuff coming down the line. If you have stories, tips, links, and other things, would you share them with me, and allow me to post them on this new resource?

As usual, you are also invited to visit http://hfradio.org - a non-commercial site offering:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options)

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

For sale:

Exciting novelty item: HAND-CRANKED MAGNETO
GENERATOR! Produces 120V AC.
These will provide about 20-30 Watts depending on
your cranking speed! The size is about 3" diameter
and 3" deep with a retracting handle.

You can mount these behind a sturdy front panel with
a single hole and the large nut provided.

Run a QRP rig off it for emergency power.
Use for student demos etc.

These are also great for fishermen to rapidly
draw worms to the surface!

Several left still! Will sell for $25.00 each

Shipping additional.

The filter will help a lot, Henry. If you're using Netscape as I am at the moment, read the newsgroup, then before you leave it, click on edit - that will drop down a selection of options, one of which says "Filters". Click on that and you can set up a filter using the words, "auction", FA, ebay, specific people's names, or anything else that you prefer not to get. Then you'll *never* see them at all. If you're using Microsoft or other newsreader, there'll be a similar capability. It won't help with the folks who put FS and then have it on auction, but I find they are usually newbies ignorant of the protocol, and others on the newsgroup set them straight pretty quickly. I don't filter at all because I have found some things I really wanted that way, but I can appreciate the irritation if you have no interest at all.

This is a super nice HQ-110. Double conversion superhet. Covers 160 to 6 meters with WORKING clock. Front panel is an easy 9/10. The aluminum trim piece that goes around the front has a drivers license engraved on the top of it (not on the front) and you can only see it if you look down on the radio. It is not real deep and should buff out. Original manual. This rcvr is very sensitive and works great. $165 shipped to your door lower 48.

Date: 2000-02-15 00:00:00 UTC
From: Ken Simpson <W8EK@fdt.net>
Message-ID: <5Dcq4.4051$JQ.241101@monger.newsread.com>
Source record: 71072

Does anyone have an older two meter rig around
that still needs crystals?

I likely can help. I literally have 100s of both transmit
and receive 2 meter xtals. Most are in the 146 and 147
MHz band segments, with very few in the 145 MHz
segment.

These are all the small HC-25 xtals, like were used in
most of the solid state 2 meter mobiles and HTs.

If you need some, please e-mail the operating frequency
you need. I have them listed by operating frequency and
rig, and not by actual xtal frequency. Send the frequencies
you need (transmit or receive), and the rig that you have,
and I'll see if I can help.

Thanks.

Cleaning out more of the shop. A clean ICOM 211 2M all mode FS. Looks very good with few blems, no smoke stain. Has a couple toggle sw handles missing, but front panel is otherwise excellent. Digital display lights up and rx partially works. No output from tx.
Inside is clean and has an AC supply built in.
If you need parts- or a project, $110 shipped east of Mississippi, $120 western states. 73, K4GJ

COMMUNIQUE SPECIAL D'INFORMATION de la C.F.R.R.

du 5 f�vrier 2000 N° 2000-02

Jugement du Conseil d'Etat. Un fait sans pr�c�dent dans les annales du radioamateurisme fran�ais.
S�ance du 5 janvier 2000 - Lecture du 26 janvier 2000 - Notification du 3 f�vrier 2000
Les requ�rants ont re�u le 4 f�vrier 2000 la d�cision du Conseil d'Etat concernant la r�glementation amateur.

Extrait des conclusions du Conseil d'Etat :

« ..qu'ainsi les dispositions des articles 2, 3, 4 et 13 de la d�cision homologu�e par l'arr�t« attaqu« ont »t« prise par une autorit« incomp»tente ; que ces dispositions »tant indivisibles des autres articles de la d»cision 97-453 du 17 d»cembre 1997 de l'autorit« de r»gulation des t»l»communications, les requ»rants sont fond»s « demander l'annulation de l'arr»t« du 14 mai 1998 du secr»taire d'Etat « l'industrie en tant qu'il homologue cette d»cision. »

DECIDE

Article 1er: : L'arr»t« du 14 mai 1998 du secr»taire d'Etat « l'industrie est annul« en tant qu'il homologue la d»cision 97-453 du 17 d»cembre 1997 de l'autorit« de r»gulation des t»l»communications fixant les conditions d'utilisation des installations de radioamateurs et de d»livrance des certificats et des indicatifs

radioamateurs.

L'article 2 : (�num�re les noms et qualit�s des requ�rants.)

Cons�quemment,
"La R�publique mande et ordonne au ministre de l'�conomie des finances et de l'industrie en ce qui le
concerne et tous huissiers ce requis en ce qui concerne les voies de droit commun contre les parties
priv�es de pourvoir l'ex�cution de la pr�sente d�cision."

La CFRR ajoute que pour toute information relative aux cons�quences de droit de la d�cision d'annulation, les
radioamateurs peuvent s'enqu�rir aupr�s de l'administration de tutelle ou de la seule des trois f�d�rations de la
concertation nationale ayant donn� quitus l'ART.

Ce communiqu� est disponible sur le r�seau packet et Internet (http://www.cfrr.org) et libre de diffusion sous
r�serve qu'elle soit int�grale.

Fin du communiqu� n 2000 - 02

Military AN/USM-207 Frequency Counter. This counter is in
working condition, although the reference oscillator needs
to be calibrated.

Included are the converter plugin to allow measurements to
500 MHz and the service manuals. The front cover is missing.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=261644426

Thanks in advance for looking.

- Mark

These are nice counters. I got one at a hamfest a little over a year ago for $15. The lady, selling it for her husband while he was rooting around in the boneyard, said that it did not work. She wanted $25 and I offered $15.

After getting it home I found that the OSC switch in the back of the unit was set to EXT and not to INT. I've got in the shack now and it does a great job.

I have for in excellent condition an ICOM IC-255A 2 meter rig.......It has a 5 memories with 25 watts high and 1 watt low range..........I have the IC-HM7 microphone and the original manual........I do not have the mobile bracket.......I will take $90 plus shipping and can be reached at (508) 821-2993 or e-mail.........WZ1U Steve / Lakeville, Ma.

2834. Re: Help Needed for NC-57

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-15 00:00:00 UTC
From: n3ab@fast.net
Message-ID: <38aee12e.646876@news.fast.net>
Source record: 71137

I want to thank all of the great people on this group who offered help
and suggestions. I downloaded a copy of the manual from the BAMA site
and located the trouble. I had very low screen voltage (and one very
hot wire-wound resistor) caused by a shorted capacitor mounted on the
RF amplifier tube socket. You know...it's the one that you decide NOT
to replace when changing out all of the paper and electrolytic caps!

You guys were a big help and a refreshing change of pace compared to
the bickering going on in some of the other newsgroups. Thanks again
to all!!!

73,
John N3AB

Source record: 71140

For sale TR-4 the later version with 8 pole filtering...front panel is
almost mint as well as the case in decent original paint.
the decal marked phones is almost gone but I stuck a decal over that
area to indicate the word phones onthe side of rig.
no power supply or speaker...the reason Im selling is that I bought a
TR-4CW/RIT

There is some chassis corosion which is typical for such an old rig.
It does work like its supposed to.
$210 plus $10 for shipping

Tnx Jack K8BVJ (1956)

Source record: 71017

For Sale: Drake L-4 Linear amplifier. In 100% working condition. Very good cosmetic shape only a small bend/nick (1/4") on top left corner of cabinet. Full power output. Includes original manual. Ships in 2 cartons one for RF deck and the other for the power supply (heavy). $625 + shipping. This is a great amp, selling because I am no longer able to run QRO. Wired for 220 but can be easily switched.
73,
Jack

2863. R-1000 Bandswitch Needed

Newsgroup: rec.radio.amateur.boatanchors

One place you can look up Canadian callsigns is at
Linkname: The Canadian Amateur Radio Callsign Database
URL: http://www.rac.ca/callbook/

and he is listed there.

Another thing worth trying is ve3efj@rac.ca The Radio Amateurs of Canada
has a sort of forwarding system for people who provide their email address.
Of course, not everyone has email, and not everyone has gone to
http://rac.ca.ca and entered their email address, but for those who
do it's an easy way of contacting a Canadian ham. It's an easier
way than trying to find an email address that matches a name or call.

2870. Help with Hum fault on comms rx

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-16 00:00:00 UTC
From: johnbinns@aol.com
Message-ID: <20000216162430.01093.00001502@ng-bk1.aol.com>
Source record: 71025

I Have a VERITONE CR-150 Shortwave comms RX. I think this rx
is a badged version of a CODAR CR-70A. It is a 4 valve (tube)
mains powered set covering 550 khz to 30 mhz in 4 bands.

I have repaired several minor faults but I am stuck with
an annoying mains hum. I have substituted the smoothing
capacitor on the main 100v supply to no effect. The heater
supply is 6.3v a.c. could one or more of the valves be picking
this up due to age or fault.

Also does anyone out there know where I could obtain a circuit
for the above rx.

Any help would be gratefully recieved.

regards John B.

In general, when you need something like that, the factory isn't interested in talking to you. Call a distributor, like Allied or Newark and ask them for what you want. Maybe they can't help but they will talk to the factory, and probably get more action than you can. Or a representative of the company that made the equipment, although it's probably too old for that.

This is the hinged top cover and rear (vented) portion of an HRO-50T's cabinet (I think that both the hinged top and the rear vented panel are a single assembly, joined together by the hinge, but they may separate).

Need not be in absolute mint condition, but at least clean and free of any rust or corrosion.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

Hello All,

Now I'm a little confused. I bought a rig a few
years ago that was missing the Dog Tags, but my buddy
told me it was an R-388, it came with an R-388 manual
but from what I'm reading here it sounds like a 51J.
No break-in switch, front panel phone AND speaker jack,
the spot for the centered dog tag, and an ink stamped
"Caution; read documentation....." verbiage in military
orange. Do I really have a 51J?

Thanks
Dan N8ETQ Cleveland, Ohio.

If you're doing this because you found a lot of tar has dripped out of the transformer, the tranny may still be okay. The one and only NC-183D I've had spilled about a half cup of tar and it still worked fine.

didn't see any circuits, and it sems to be a general problem for many
of the sites.
Investigate into ressources for Drake 1-A and 2-A, but seems the only
circuit available is the one I posted to http://bama.sbc.edu/ (K4XL),
and although I have circuits for older version of 1-A (1957) and 2-A,
these two are perhaps not good enough to show on a site, but it must
be pointed out that the early Drake 1-A (1957) has 6BF6 for AGC, and
the later has 6DJ8 which includes a clamping diode (for what reason it
should need to limit the agc to 15V seems uncertain), and the Drake
2-A has 6AV6 audio amplifier, not 8BN8 as stated on one site, this is
for the 2-B

>Otherwise check the manual vendors at URL:

I think you have an R-388/URR-23A. I have one and it has the breakin switch low left side. These receivers were used at the Collins factory for bench test units. I have the two jacks (PL259) and the two terminal strips on mine. .The name plate is located top center of receiver above the dial.

Hi Jeff OM,
I can't help you with the meter, but is it the grid meter?
If so and the old one was zapped, highly likely it was due to a VHF parasitic taking off, and wiping out one or more 3-500Z's, causing a plate current surge which then takes out a lot of the grid metering ckt components, including sometimes the meter. Before firing up with that new meter, see Richard Measures' web page if you are not already aware of vhf parasitic problems he has investigated in lots of commercial and kit amps, including the Heath SB-220.

I have a cosmetically nice Hallicrafters station for sale. The SX-111 works great. The HT-37 has a bit of carrier, otherwise works fine. Very nice front panels. The HT-41 was used by WB8DML on the HCA nets, but I haven't had a chance to wire it up yet. Front panel average to good; a switch was added. Has RF sniffer circuit. Near flawless R-46A speaker and a mic will be thrown in for $700 or make offer. Will Trade for nice high-end receiver like a RACAL or Harris. With manuals. Prefer pickup in the IN/IL/OH/KY area, but will ship CONUS. Picture at http://www.qsl.net/hca/Brad/1962_station.jpg .

Another characteristic of the 388 is that they often had the MWO data stenciled on the front panel. I have one which is lacking the nameplate, but has the break-in switch, and is obviously a R-388. There are three MWO numbers listed on it. It also has 5302 stenciled where the nameplate was, and I assume this is a date code (second week of 1953), but this may be a pipe dream.

2917. Upgraded FL-2100 amp $425 shipped

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-17 00:00:00 UTC
From: Lane Ku7i <Ku7i@worldnet.att.net>
Message-ID: <Z%Gq4.17666$LC4.332940@bgtnsc04-news.ops.worldnet.att.net>
Source record: 71040
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have an excellent yaesu FL-2100 amp. Pair of 572bs (newer Cetrons, VERY low air time). I have installed a cathode protect fuse in the filament center tap winding. It is on the rear panel. Opens in case their is a tube flashover. Also have installed new high voltge meter multiplier resistors. Also completely tore the fans down to parade rest, regreased and reassembled. The swr circuitry has been removed. The meter and switch is still inplace. I was going to use the switch to select 160 meters but never got around to doing the mod. The plate current meter has glitch protect diodes installed to protect the meter movement in the event of a tube flashover. The amp is totally protected and it looks and works great. 100 watts in will get 800 watts on 80, 40, and 20. A little less on 17, 15, 12, and 10 meters. Use 15 meter band for 17 and use the 10 meter band for 12. If you have a solid state rig you'll need to run the auto tuner since the tuned inputs are not a low enough Q to offer a low VSWR for 17 and 12. I get 700 out on 17 with my 850 driving the amp at abt 110 watts.

This is a really nice VERY operational amp. It has been my backup amp for some time now but I want to play around with an Ameritron AL-811H so I need to sell this first. I have the original manual. I will professionally pack and double box the amp and tubes and they will both be shipped seperately via UPS ground. $425 gets it to your door. You will not be disappointed. US postal money orders get amp shipped out without delay.

2920. Help Identify: Collins 51J-? / R-388 / ???

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-17 00:00:00 UTC
From: Marty Tippin KI0LO <martyt@pobox.com>
Message-ID: <88h0r4$51f$1@nnrp1.deja.com>
Source record: 71043

I bought a Collins 51J-something receiver and need help figuring out which version it is - the serial number/ID plate on the front is gone and the former owner doesn't remember which version it might be. He used this receiver for many years in a crystal manufacturing company here in Kansas City.

Here's a rough description of its features - anyone who can say for sure which model it is, please let me know!

* Doesn't have any mechanical filters nor does it appear to have a place for them near the PTO box. So it's probably not a 51J-4
* The front panel only had a single serial number plate, exactly in the center of the panel. Looks like some of the 51-J series had more than one plate.
* There is a toggle switch on the bottom left of the front panel, next to the headphone jack that says "Break In". There is no front panel plug for speaker. This switch appears to be in the same place the speaker jack would be.
* The rear panel has SO-239's for antenna input and IF output, and two terminal blocks for speaker and "Remote" (muting?) Also an external AVC jack and one that says something about a diode.
* The only identifying mark anywhere on the receiver is on the rear panel, a black stamp that says "301"
* I don't see any transformers on the antenna input circut anywhere - looks like a bunch of tuning slugs to me. There are a pair of relays on the underside of the chassis, probably relating to the "Break In" switch on the front.
* The front panel appears in all other respects identical to several 51J-4's that I've seen - same color, same knobs, same meter. The only difference is that "Break In" switch.

Any ideas? Pointers to other references on the subject? All help appreciated - please post replies here and by direct e-mail!

John,
Name here is Joe Cro (N3IBX) and I have a National HRO-5T with all coils
from 500 kc to 30 MHZ. It does not have a speaker and the power supply is not
the National "doghouse variety" but a very nice GE.
I currently have it mounted in a four foot rack as the RX and power supply are
for a rack mount system. Even though I'm not really interested in selling it
directly, I would be very interested in trading it for a piece of ham gear(s)
of comparable value.
I live in Washington Crossing, Pa. - about 30 miles North of Philadelphia.

If you're interested let me know.
73 de Joe Cro N3IBX

Joe - go to http://www2.southwind.net/~n0alo/ - this guy sells boatanchor paints.

BTW a BIG BIG problem with the SX-62 (and SX-42) are the crapacitors in the tone circuit. If one of them shorts the entire B+ goes thru one side of the output tranny, thereby frying it. If you do NOTHING else to this radio, replace all caps associated with the tone switch, and connected to the plates of the 6V6s.

There are many other endemic problems with the -42 and -62. If you have problems email me, I've probably solved the same ones.

Hi-

I have a pair of ancient "Telephonics" cans -- the old-fashioned
high-impedance headphones.
Maybe from the 30's or 40's, or perhaps earlier.
Each 'phone about 2 to 2 1/2" inches in diameter, brown/black and the
wires cloth-covered.

I'm wondering what "type" of phones these are.
Is it likely that they are so-called crystal headphones?

Or, similarly, what _are_ "crystal headphones," and how can they be
distinguised from other old
types?

Thanks for any info on this.

Rgds,
Joel

I feel honored being visitor #1.
I've had a Collins 51J4 for a while now, and I'm still not used to its appearance.
How can a well designed and built radio like that look so ugly? (Sorry Collins fans)
I like the look of the Hallicrafters SX-42, one of my first boatanchors.
Anyway, nice pictures Jon.

>
> Anyone ever build/modify such beasts?

It was the June 1971 issue of QST, by Larry Lisle. "New Life for
the All-American Five"; it was the Beginner and Novice article of the
month.

The converter had three transistors, and was crystal controlled. The
front end covered 5 to 15 MHz, so if you wanted to change bands, you
would simply put in a new crystal. The loop was eliminated so the radio
wouldn't pick up broadcast stations, of course.

The IF stage was put into regneration, to improve the selectivity, and
a transistor BFO was added.

You forgot to mention that a circuit was shown to add a magic eye tube
to indicate signal strength.

It was the third issue of QST that I got and at age 11 it all seemed pretty
neat. It is interesting to contrast the finished unit with a lot of
low end receivers of the era. Was it the Hallicrafters S-38 that
wasn't much more than a glorified AA5? I thought they were transformerless,
and at least some versions used regeneration in the IF not only to
improve selectivity, but as a BFO. And of course, the dial on the radio
only had to cover a 1MHz range, whereas any low end general coverage
receiver of the day would have covered as much as 15 MHz (if you were
dealing with the 15-30MHz range), crowding the stations together on the dial.
ANd since the scheme was double conversion, image recjection would have
been better than those other cheap receivers.

I'm absolutely certain that the modified All American Five was almost infinitely better than the shortwave receiver I bought the next month, a Hallicrafters S-120A; note the "A", it was a transistorized receiver. That thing must have been thw world's worst shortwave receiver, with it's ability to overload easily, and the weak BFO that made SSB reception impossible. I'm sure it was no worse in terms of dial and sensitivity and selectivity, than a lot of similar low end receivers.

There did seem to be something spectacular about that article; I'm still not sure if it was the timing so soon after first subscribing to QST or what.

But the idea of a converter ahead of a broadcast receiver was hardly unique to that article.

When AM was common, a lot of converters were put ahead of car radios for simpler mobile operation. That's where all those Gonset converters come from, though they had tuneable dials.

The very month before, QST had an article about a converter for mobile operation. Crystal controlled, and with a BFO built in.

Of course, some people used those converters intended for mobile operation at home, either with a car radio or some other broadcast receiver they had around.

QST seemed to regularly run articles about building converters ahead of pocket radios, at one time.

I don't recall other articles about turning tube radios into communication receivers (or close to that), but once transistor radios hit the scene, there was quite a bit.

One article in Ham Radio disabled the mixer/pscillator, and used the pocket transistor radio (from Radio Shack) as a 455KHz IF strip. That made a certain amount of sense, because except for car radios, you had to do something about the loop antenna, either shielding it or replacing it with a shielded coil, to eliminate pickup at the first IF.

But some articles got terribly complicated. Add a converter ahead of the transistor radio, wire in crystal filters and/or extra IF amplifiers to the existing IF, add product detectors, BFOs, undoubtedly noise limiters, etc. A simple converter and BFO makes sense, but once you start really adding to the existing broadcast radio, you have to ask the question, "wouldn't it be simpler to build it all from scratch?". Especially when one of the limitations was the variable capacitor and tiny dial in the transistor radio.

Of course, a month after the AA5 article, QST had an article about adding a 2Meter converter ahead of a AM transistor radio, so you could receive those still relatively new FM signals via slope detection. And a month later, they came out with a second version, where a whole limiter/discriminator strip was added to the 455KHz IF of the portable,

giving you relatively cheap 2M FM reception (and tuneable too).

Back in the 60s, this was true...In fact, the Novice and Technician
class license could be held at the same time. (Which was interesting;
had a friend who was WN5xyz and WA5xyz at the same time! Dont recall
his actual call but you get the idea!) But then the Techs of those days
STOPPED at 50.0000 MHz.. and the techs did NOT have full 2mtr
band priviledges until the early 70s!

I have a Keypad for a Collins KWM-380 for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=263640124

and the blurb is

This is a mint-condition keypad for the Collins KWM-380 transceiver.
Enables direct frequency entry from the keypad, storage of displayed
frequency into one of 10 memories, recall of frequencys stored in
memory, and "stepping" through the frequencies stored in memory. The
stepping feature is especially nice for contesting. This is a heavy
metal brute, weighs around two pounds and mounted on a rubber slab so it
stays put on your operating table. Comes with documentation, cable and
connector all ready to plug into your '380 and go. This is in like-new
condition, owned by a non-smoker who rarely used it. I honestly don't
think you could tell it from new. The last time I saw a KWM-380 keypad
advertised retail it was close to $300; I don't even know if they're
still available anywhere else but right here on good ol' eBay.

Check my other auctions for a KWM-380 SSB filter.

Closes 2/27/00.

Thank-you.

In a garage sale I got a bunch of old radio stuff including a small box
of mixed tubes, the box is marked transmitter tubes and includes:
6T8 5,Raytheon
19T8 5,raytheon
8348 YL1080 2,amperex
8408 YL1130 2,amperex
8457 5,amperex
7056 5,sylvania
6AK5 5654 5,CBS sample
115BEP 6296 1,dumont sample
6883 1,dumont
CK6883 1,raytheon
DX296 1,amperex
8042 1,amperex
5894 3,amperex
7377 5,amperex
8462 5,RCA solid state
8072 2,RCA solid state
Most of the tubes are not in boxes some may be used.
I want to build a one or two tube reciever and maybe some other
projects but the above tubes are not likely to be of any use to me.
I would like to trade (hobbist to hobbist) some or all of these tubes
for stuff I need like recieving tubes 1H4G,6AF11, headphone, coils,
etc....
I imagine some of these tubes may be of some value, is there a price
guide I can check on to see the values. Can these tubes be tested to
see if they are good. Should I post on other sites.
Thanks

2954. Remember QST articles on converting AA5 AM tube radios for ham work

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-18 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <88irgu$tm8$1@nntp2.atl.mindspring.net>
Source record: 70993
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

I vaguely remember QST articles for converting old AM tube radios for novice rig receivers. They had essentially a crystal controlled block converter in front of the radio's front end, and a BFO stage applied to the IF strip. They also went to some trouble to emphasize that the radio circuits be run on an isolation transformer.

More details: The radio's loop antenna was removed, and a shielded coil of the right inductance was installed. Also a trap circuit to prevent AM broadcast stations from getting thru was also needed. The system was essentially a block downconverter from a novice band to around 1MHz, then a tunable 1st "IF" of somewhere from 540 to 1600KHz was used, and the second IF of 455 (the radio's old IF) was used. And a local BFO set to 453 or so KHz was used to make the CW into beeps.

Anyone ever build/modify such beasts?

2959. What's Inside a B&W 2Q4/350

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-19 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <20000218220235.12476.00003481@nso-fg.aol.com>
Source record: 70914

Hello Folks,

While going through some of my papers, I discovered some info that may be useful to anyone who is thinking of building a phasing-type SSB rig.

One of the problems with the phasing method of SSB is getting the necessary 90 degree phase shift over the audio range. Even after solutions were worked out, practical phase shift networks ("PSN"s) required very precise values of resistors and capacitors. So manufacturers began to offer packaged PSNs as components.

Probably the best-know of the PSNs was the B&W 2Q4/350, made by Barker and Williamson. These units were housed in a metal tube shell the size of a 6J5, and gave a 90 degree phase shift (plus or minus 1.5 degree) over the audio range of 300-3000 Hz. Many SSB projects in the '50s were designed around the 2Q4/350.

And B&W actually told you what was inside! They figured most hams would not have the equipment to duplicate the PSN, anyway, and they were right. But today, with highly accurate DMMs being very common and PSNs very scarce, some may want to try their hand at building one. So here's what's inside, taken from a 1955 B&W data sheet. Pin numbers are the same as any octal tube.

From Pin 1 to Pin 2: 680 uuf cap in series with 487K resistor
From Pin 2 to Pin 3: 430 uuf cap in parallel with 770K resistor
Pin 4 has no connection
From Pin 5 to Pin 6: 680 uuf cap in series with 125K resistor
From Pin 6 to Pin 7: 430 uuf cap in parallel with 198K resistor
Pin 8 has no connection

No precision is specified, but with 1% resistors and 5% capacitors readily available, it should not be too hard to get close enough. Note that there are only two capacitance values.

In most designs, Pins 1 and 5 are connected together, and Pins 3 and 7 are connected together. Balanced audio from the secondary of a plate-to-line transformer feeds Pins 3 and 5, and output to the grids of the audio stages is taken from Pins 2 and 6.

More!

The RME 4301 SSB adaptor (meant for receivers) used a PSN, too. This one is in a rectangular metal box that's not sealed like the B&W unit. I have the data on what's inside one of those, too:

From Pin 1 to Pin 4: 2430 uuf cap in parallel with 133K resistor
From Pin 3 to Pin 4: 4860 uuf cap in seriesl with 94K resistor

Pin 2 has no connection
From Pin 5 to Pin 6: 1215 uuf cap in series with 94K resistor
From Pin 5 to Pin 8: 607 uuf cap in parallel with 133K resistor
Pin 7 is metal shell (ground)

Note that the capacitors are all even integral multiples of each other. I don't know how this unit was supposed to be used.

I don't have any of the PSN's, just the data. Hope someone can use this. Someday, I'll build one...

I came across a pair of 6GJ5's in one of my "junk boxes", apparently in
good/new condition, boxes and all. I've LONG since forgotten where I got
them or what they were used in - any help?
Gary - KJ6Q
=========================
Hi Gary,
They can be used as subs for 6JB6's in Drake "2-holers". You need to take
special care in getting them neutralized on the higher bands, but have
worked fine for me on the lower bands. Others have used them, too.
I have a few NOS pairs for future use when 6JB6's get too pricey/scarce.

Source record: 70926

The 6L6 is getting "soft" which is a mild "gassy" condition. It will
get worse with use. It comes from the elements outgassing over time
from the high temperatures that power tubes experience when dissipating
heat under normal power output operation. Most power tubes in af and
rf applications eventually deterorate in this manner. If the tube is
part of a push-pull amplifier it is most likely operating unbalanced so
the other tube may also be affected depending upon whether it is
loafing or carrying more load than normal.

Hi Gary.....How are you coming on the parting out of the sx42. Are you down to the tuning gear assembly yet? I could use most of the parts there....in particular, the large gear that is drivven off the main tuning knob. The little gear that is attached to this one is slipping on mine.
I don't think I've seen a more complicated mechanism than this one. By the way, I put the output transformer in and it works good. It even had the same amount of dirt on it. Thanks...Jack

2975. Re: Purple Glow in 6L6 tube?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-19 00:00:00 UTC
From: Bob Weiss <bweiss@carroll.com>
Message-ID: <38AEBD36.F97AB38F@carroll.com>
Source record: 70930

If the glow is on the inside walls of the glass envelope, or on the surfaces of the mica spacers, it is caused by electrons hitting the glass, and is nothing to be concerned about.

If the glow is inside the plate structure, it may be an indication of gas inside the tube. Tube replacement is the only cure for this one...

it's gas, generally not a big problem..
nothing you can do about it..
except replace tube..
if it's a lot of gas it'll make grid go positive..

2978. Re: What's Inside a B&W 2Q4/350

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-19 00:00:00 UTC
From: Bob <bmiller@calweb.com>
Message-ID: <38aed55c_1@news3.calweb.com>
Source record: 70933

The CQ SSB manual published way back when, also published the makeup of the phase shift networks from B and W , Central Electronics, and Millen. I belive the Heath SB-10 used the B and W 2Q4, but published the values in their schematic. Others like hallicrafters did so as well. For the phasing network from hell, check out the really nice on from the CE100V/200V transmitter. The monster network that was published in the ARRL handbook for years is a nice network (despite the critical assesment in QEX some time back). But to echo N2EY's comments, the little 2Q4 is a reasonable unit and with a modest DVM and digital capacity meter like the B and K 820, you should be able to duplicate it with not much investment in money. build 1 or 10, the price will not change much.

Without disturbing the convection cooling, place a large opaque shield around the tube.
Then you will not see the glowing anymore, and won't have to worry about it being a problem
or not.
My wife taught me this trick with her car- if something sounds funny, she just turns the
radio
up louder.

Wanted:

Weston Type 731 Panel meters: any scale okay. Will pay
shipping on broken meter.

These are generally square housings but the way the glass
face is shifted towards their top, they may appear slightly
rectangular to you.

Also need 1/4" jack panel having two or more rows.

Thanks in advance,

Doug

2982. WTB Collins Power Transformers

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-20 00:00:00 UTC
From: Roger Leone <arleone@inreach.com>
Message-ID: <yZUr4.724$th3.8953@news.inreach.com>
Source record: 70744

I am rebuilding 2 Collins power supplies, both with bad transformers.

One of them is a PM-2 supply: transformer is Collins Part Number
044-0898-662
The other is a 516F-2: transformer is Part Number 662-0299--00 (Chicago
Std Trans P/N 27235)

I have checked all my misc transformers, and have nothing that will work,
either because of incorrect voltages or physical size.

If anyone has these available, or can point me to a source, I would
appreciate it very much.

Thanks

Roger K6XQ

--> Interesting thread indeed. I've been thinking about building an
NE-602 based converter to pick up shortwave in my car. Unfortunately, I
can't simply use a crystal LO like I would have in the past; modern car
radios tune in steps instead of continuously, so for good shortwave
reception I'll need some kind of fine tuning on the converter LO.

The NE-602 is a really fun chip to tinker with. I have a Neophyte Receiver
for the 40 meter band that I built around it.

Hi Mates,
Perhaps I did not phrase my question properly. As an collector of about 20 of these things I fully appreciate the intrinsic value of the meter itself and would never trash a good one just for parts. This one, by the way, is a very nice unit. My question was to the uniqueness of a "Virgin" calibration book since in my 40 plus years of radio junk collecting I've never seen a non-calibrated unit with a blank book.
I've built calibration tables for a couple of LM style units in the past and it was a time consuming but rather fun experience. BTW when I went through Army Communications training back in the late 1950s, the BC-221 was till in common use as well as the GRC-9 which had a BC-221 style calibration scheme. Lots of interpolation!
. My favorite pet in the hetrerodyne frequency meter collection is a Lavoie Laboratories LA70V. 1khz to 1 Ghz and lots of knobs to tweak.

Tnx for the read and the feedback

Message-ID: <RgZr4.4892$PA2.425350@bgtnsc06-news.ops.worldnet.att.net>
Source record: 70760

After 20 years of hamming I am getting very interested in working AM. I have a TS-850S by Knwd that works well but I desire to get into the higher fidelity
xmit bandwidth. The Knwd rig only xmits at 2.4 khz wide, which seems pretty narrow considering I can rcv up to 12khz wide (a nice plus of the 850). I am looking for the ranges of average priced boatanchors xmtrs. I am familiar with the rcvrs but am in the dark with the xmtrs of the AM era, circa 1950 to 1970?

What would be a good AM xmtr? It must go down to 160 and must have a vfo. Prefer a unit with 6146 finals. The selection seems overwhelming. DX-100? HT-37? Average prices?

Any info on recommendations is appreciated.

Howdy,

I have the IC-706 MK II G. It seems from the manual that the mic input is 600 ohms. Is this correct?

I want to use my Shure mic from the Kenwood TS-830S. (MC-50). It has High and Low (50 KOhms, and 500 Ohms) impedence. Now, my hope is that I can match, say, the 500 to the 600 with a transformer (I can wind it??). Or, is there something better I can do? The shure mic is flat, I think... would that be good on a MKIIG?

One of the reasons I wish to do this is that I have a boom mount so that I can have hands-free operation... I already created the conversion cable ... that works fine. Just the impedence mis-match causes the MC-50 to currently be way to weak for good operation.

Thanks!

I have below listed summary for sale as a "LOT ONLY"
they all go or none go. No ship local PU only. Will e-mail
you detailed list if you are interested. Make me a "fair" offer
and they are yours.

I am located in Bridgeport, Ct., 50 miles NE from New York
City on I-95.

NOT ALL YEARS ARE COMPLETE (see detailed list)

QST -----------------1920 to Present
73 --------------------1960 to 1988
Ham Radio -----------1968 to 1987
Ham Radio Horizons---1977 to 1980
CQ --------------------1945 to 1992

It's something to ponder, but I suspect it would be hard to prove.

However, for your specific example how many products did Drake release between 1957 and 1962? They had long been in the business of selling low pass filters, but wasn't their first big piece of equipment the 1A receiver in the late fifties? And I would think the only other products in that era was the later versions of the receiver.

Drake transmitters and transceivers seem to have come after 1962.

I went through some back issues of QST during the same years, and there was an absence of Drake ads in it too. Drake may not have had much to advertise.

CQ's equipment reviews in that era weren't much more than a product description. Someone would buy a new rig, and write about it. Sometimes it was written by the very few staff members, but from going through back issues I get the impression they were done by amateurs at large. Occasionally, they did run schematics or partical schematics, but generally the articles were opinion pieces.

Wayne Green was editor of CQ for part of that period, and when he started 73 the "reviews" were always that same format, glowing terms and not a lot of detail.

It was only later in the sixties that CQ's reviews become more informative, with actual lab testing done on the equipment, and detail on the technical end of the rigs. (And they ran a review of one of the Drake 2 receivers, I don't have it handy but assume it would have been the 2C, in 1976.)

One thing you will notice is that you rarely see bad reviews, in any of the ham magazines.

But I"m not sure that any of this indicates an actual selection of what's reviewed based on who is advertising.

What I miss is the days when the reviews would include portions of the schematic, to show off interesting tricks or techniques. The reviews nowadays are a lot more extensive, but they portray hams as consumers, not a group of technically aware people.

> tnx for the read
> Bob, KE6F

Coincidental with your post, I opened up an old issue of QST, and there
was an article about calibrating the LM Frequency meter. QST for April 1965,
page 18, "Calibrating the LM Frequency Meter" by Gilbert L. Countryman.
And he mentions an article "Calibrating a BC-221 Frequency Meter" by
Dudley, QST for March 1950.

I can't say that I've ever seen mention of a blank calibration book, of
course it's not like I've paid a lot of attention, but your post
and that article certainly indicates that there should have been.

There clearly would be instances when a blank book would be needed,
either because the calibration has changed, the book has been lost,
or as the article mentions, one might need better calibration in
certain portions of the dial. It makes sense that there would have
been blank calibration books for this sort of thing.

However, the article makes no mention of such a thing. It talks
about how to do the calibartion, but it says nothing about recording
the new results. It might be interesting to check the manual to
see if anything is said about this topic.

Howdy Tomas....Based solely on my experience, I wouldn't think that your problem is due to mismatch...(assume you are using the 500 ohm setup of that MC-50 of course). Impedance is only part of the requirement, with level being the other....output level of a particular cartridge, the directional characteristics of the microphone assembly and to a lesser degree the response curve of the mic can affect its use with a different transmitter.....the response curve will really affect the sound of it when SSB (suppressed carrier) mode is used. If that was my project, I'd want to monitor myself (or preferably someone else you know) using the combination to see if the response is acceptable...if it is, merely increase the mic level to suit - if its still not enough you may have to consider another cartridge OR an added preamp with just enough gain to restore good RF power output response to the audio input. Best of Luck!

I think we're getting away from boatanchors and antique radios.

One of the hobby electronic magazines ran an article about building
a converter to use with a car radio. The circuitry was nothing special,
but they used two crystals, 5KHz apart, to deal with digitally tuned
radios. Since SW broadcast stations are 5KHz apart, you'd flip the
switch to get the in-between stations. The idea does get cumbersome
if you want to tune more than one segment, and you're less likely
to scrounge up a pair of crystals 5KHz apart for the range you want
to tune.

This isn't too useful for use in a car, but those big chunky Delco
digitally tuned car radios have a lot of potential. Not only are
they common and cheap, but there's a lot more room inside to
modify things. Too bad it uses a 450KHz IF for the AM band, or
else I'd put in a ceramic filter from a CB set to narrow things down.

The radio is a lot better than a lot of common broadcast receivers I've
had, which of course may say more about the state of common radios rather
than the absolute performance of the Delco's.

The most intriguing thing about these particular radios are that they
are built on two boards. One has the actual AM/FM tuner, and the other

has the synthesizer and audio circuitry. This means that one could use the tuner portioin as a standalone tuner. The idea being that one could do away with the synthesizer, and tune the radio byvoltage control. Find a ten turn pot and dial, and it might be quite nice to tune. One could get it to cover only 500KHz, and you might get a nice tuning rate. Eliminating the synthesizer removes the problem of the tuning steps being too course, and any noise from the synthesizer.

The front end in these radios are nice and wide open, not in one of those tiny shielded boxes. So again it begs for modifications.

One advantage of a car radio is that it needs an antenna to work, and
is relatively well shielded. I picked up a car radio somewhere,
and once I figured out the connections, it was completely dead and
I was certain the thing needed repairing. But once I put a short piece
of wire on it, it came up perfect.

You probably get some idea how a given radio will work by running
it without the antenna. But of course, once you attach something
a strong signal probably does have a way of working around circuitry.
Good shielding, both of the converter and the cable connecting
it to the radio, would help. Surely a double balanced mixer would
help to eliminate feed-through, and good filtering at the front end.

Of course, this is another reason for a tuneable converter. You pick
a frequency that isn't used locally, adjust the converter's oscillator
so the IF is at this frequency, and then don't have to worry about
feedtrhough. You have to fiddle with making a dial, but then
you can calibrate it to read directly. And image rejection at
the first IF, ie in the broadcast band, will be constant. I've even
seen tuneable converters described that put a simple filter between
the converter and the radio; even something as simple as a series

crystal would improve things, though that might be too much selectivity.

I've been tempted to put a converter ahead of a CB set Something would have to be tuneable, but the selectivity is better and the noise blanker might be useful.

Source record: 70777

Greetings, all,

I acquired an R-392 (Western Electric mfgr) at a hamfest today.
With the receiver I received the power supply cable and 28 volt
supply, a shielded cable with an RCA connector on one end and
the audio connector for the '392 on the other, an LS/166U speaker
with crimp-on connectors.

So...where do I start? I have no problem getting power to it,
but it'd be nice to know the pin-out and function of the other
lines of the power cable.

Ditto for the audio connector. I gather that the previous
owner fed it to a stereo or other amp given the cable he
sold it to me with, but it'd be nice to connect the speaker
directly, if possible. Is it possible? Is there the correct
drive and impedence on that connector? Where can I get that
connector?

Thanks in advance for any assistance you can provide!

Eric

Message-ID: <935s4.5236$84.586422@alfalfa.thegrid.net>
Source record: 70779

For that string of almost dead AA batts to use as a B supply....
RECHARGE 'EM!
AA alkaline batteries can be sucessfully recharged many times using a
'Ray-o-Vac charger made for the 'special' rechargable alkalines.
Here's a quick GENERAL summary:
* the Duracell batts recharge the most times, (verses Energizer)
*the new high output expensive alkalines don't like recharging,
*you lose roughly 10% of the output after each recharge,
*batts recharge most sucessfully after a fast discharge (like a strong
flashlight, not like a wall clock),
*they last the longest if 'topped off' instead of drawn all the way dead.
*15 times seems to be a reasonable recharge number.
This is all GENARAL!!! not meant to start an argument thread! (hi hi) :)
My Elmer, now silent key N6ZJB did extensive tests on these about two years
ago. This is about all I know. The large charger (model PS3) takes 1-8
AA's, or 1-4 C's or 1-4 D's. It's about twenty bucks at places like K-Mart.
The smaller model for AA's works great too. Either one'll pay for itself
QUICK!! I hope this is info the group can use. 73

When driving my 8072 final to more than 40 or 50 watts I hear a hum in the headphones when first keyed.... HMMmmm but it's only present during the first 2 or 3 chars send. There is no hum heard during long transmissions or after a few chars with the keyer but as soon as I stop keying for a minute or two it returns for a few chars... I also notice a slight fall off in output power during this hum say from 60 watts it drifts down to maybe 55 - 58 watts and then hold pretty much steady there... Is this by any chance a function of the capacitive filters in the HV supply? The rig uses ONLY caps to filter the HV... no choke!

Hello all,

I remember reading about those "empty" books being available for sets wich
needed recallibration for whatever reason.

I am still curious about how the original calibration books were made for all
the individual sets. I guess that it must have been automated.

FOR SALE

RCA BTA 1R1 1 KW broadcast transmitter. Operational. Tuned to the top portion of the broadcast band. Excellent (large) candidate for 160 or 75. This unit is in good condition for its age. (1960 ish) Scratches on cabinet and a few switches need new paddles. Needs 208-240 VAC single phase.

You will need a pickup for this baby. 1300 lbs, however the transformers are removed for ease of moving. Easy to load.

I would not be selling this except I can't afford to move it across the country. Estimates at $500.

Unit is in Toronto. You must pick up. Can not deliver.

$750 US or trade for ????? other ham gear. Old or new.

email me directly for pictures and for any questions.

believe it was mentioned by WB0JGP and K8RRH in HR 12/77 that only

certain magazines had good reviews, and you would probably have to learn German language to read CQ-DL, on the other hand I think Radcom is quite good, but miss circuit diagrams in review

I wrote some comments and passed to HamRadio about incorrect statements in the article mentioned, but don't think they dared to take my comments, they might possibly be afraid of a good advertizer? Read W5DA's article in 73' magazine and he mentioned some details like the mod for the R-4C AF amplifier was wrong, mine oscillated on 1.5MHz(!) and disconnecting wires from BFO to product detector did not at all reduce leakage into the receiver, it may improve the product detector, but the truth is limited.

G'Day All,

The December 1950 issue of CQ magazine published an article entitled
"Demothballing
the BC221"

This article was reprinted in "CQ Anthology - The best of CQ1945 - 1952".

Mention is made that large numbers of BC221AKs were available on the surplus market with no calibration books or cases when the government contracts were terminated.

I guess that somewhere many miles away in the calibration facility there would have been piles of blank calibration books awaiting for those BC221AKs that never arrived, Hi and were disposed of similarly to the BC221AKs.

Does anyone know how they were originally calibrated???. I would be interested to hear from anyone who knows how they were done.

>can't simply use a crystal LO like I would have in the past; modern car
>radios tune in steps instead of continuously, so for good shortwave
>reception I'll need some kind of fine tuning on the converter LO.
>
One thing to notice is that shortwave broadcast station frequencies are spaced at 5KHz intervals, and the
Akai set tunes only every 10KHz. The downconverter local oscillator causes a 2500Hz offset on the
downconverted shortwave stations. This is within the Akai receiver's IF bandpass filter, so you can listen to
stations at x.xx0 MHz and the other stations at x.xx5 MHz. Of course, this means that you won't be able to
seperate some stations 5KHz apart. See diagram below.
See diagram at: http://www.geocities.com/CapeCanaveral/9178/radios/swconv.jpg

I used the Ramsey shortwave downconverter board, and modified the input filter to allow signals between 9.5 to
10MHz thru, and to stop signals above and below. This is like the RF section of a superhetrodyne radio set.
The Akai receiver acts as a tunable IF. The 9.5 to 10MHz filter stops images from 6 to 6.5MHz from getting
thru.

QST had a tendency to do that. 73 magazine made it a bit simpler to get on the air with junk in those days. Why try to make a silk purse out of a sow's ear?
As a "kid in high school" I managed to get on the air with a $10 ARC-5 and a $25 Knight R-100A and a twin-lead dipole. I've got a sheaf of ARRL Official Observer Notices to prove that the chirping ARC-5 reached all over the US, including the FCC Monitoring Station in Grand Island, Nebraska.
Steady work at KFC earned me a Hammarlund HX-50A which I now see is at ebay auction for $405. I bought my HX-50A and HQ-170AC w/spkr as a pair for $125. And I had 160 meters! Then I built the 813 amp in QST (70-71) for basically nothing and was good for 500 watts and could light up the whole house with RF feedback. It was alot of fun at the time....

3040. WTB Junker HW-12 HW-22 or HW-32

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-21 00:00:00 UTC
From: Bruce Barley <lbbarley@feist.com>
Message-ID: <OQns4.518$Bh6.4021@newsfeed.slurp.net>
Source record: 70795

Hello to all -

I am resurrecting a Heath HW-22A that's been up on a shelf for at least the last 10 years. Most of the composition resistors have drifted (UP) and are out of specs by as much as 3X the marked values.
Call me an old fart. Call me cheap. But this rig is spread out enough that I can get my soldering iron into it, and the parts are big enough I can still read the markings w/o a magnifying lens. Hi- Hi .

So far the rig receives OK, and transmits poorly - low output. I think that's mostly due to drifted resistors that are in a voltage divider string to the mixer and driver grids. So. Once I get those pesky composition resistors replaced, I am still going to need a few other parts and pieces. Frankly, I'm a little surprised that any of it even works, considering...

If you have a JUNKER HW-12 HW-22 or HW-32 available, please reply OFF-LINE. Clean up the anti-span Xx's in my e-mail address and drop me a line. I have a schematic for the HW-22, but I would like to acquire also the alignment and trouble-shooting pages from the owner's manual.

Are you currently using a HW-12/22/32 series Heath? Or have you restored one, yourself? The old-timers locally won't admit to having even seen one before... Hmmm. Oh, well. Winter's not over yet. Maybe I'll get it finished before the outside chores kick in this Spring. 73's... and looking forward to hearing from you.

Source record: 70848

Greetings, all...

A friend of mine picked up a "micro-boatanchor" at a hamfest today. It's a LF receiver, Setchell-Carlson model 524, S/N 7xxx. Looks like it once was in an aircraft... nominal 24-28 V. supply. Smaller than a breadbox (or a loaf of bread!).

Any idea where I can point him to get further info on this rig?

Does anyone here have any info on it?

Thanks much,

Eric

Source record: 70849

Last year I obtained a LAGIER Model 50 HF Communications receiver. It is, to borrow a phrase, "massive in the modern manner". Uses toobs, of course
It covers from about 150 kHz to 30 Mhz in six bands, with variable selectivity, noise limiter and other standard features. Markings are in French. Looks to like late 50s.

Who was LAGIER? Can anybody provide info on this radio?

EMail, please

There was an article many years ago in 73 about how during WWII the
flight lines used to recharge carbon-zinc D-cells for flashlights. If
I remember, they charged all of them each day, so they never ran them
down too far, just the use they got the previous night.

There is no significant difference between a 500 Ohm and a 600 Ohm impedance microphone. Just connect it and it should work.

73, Bob K6DDX

Pinout for J103, 102, and 101 on the R-392:

J103 A fused +28 vdc power
B Break in relay
C Common to "C" on all 3 plugs
D fused +28vdc filaments
E Gnd
F common to "F" on all plugs
H AF out (600 ohms)
J n.c.
K Common to "K" on all plugs, Carrier relay control

J102/J103:

A, L AF out (600 ohm)
B, H, E Gnd
C Common "C" to all plugs
D n.c.
F Common "F" to all plugs
K Carrier relay control

For Sale:

Hallicrafters SX-24 Defiant receiver. Needs some work,
but is an excellent candidate for total restoration to
museum quality. No dings or dents. Needs s-meter.
Original S-meter not present but has NICE
Hallicrafters SX-99 S-meter in place. The set has a
missing output transformer (common single ended 6V6 type),
but appears to be complete and could be made to work
with minor repair. Has all original knobs and the
front panel shows well. The cabinet has the
cool-looking louvres on the sides, which match
the speaker used with both the SX-24 and SX-28 series.
If you already have the speaker it will look really
great with this radio. Will sell for $175.00
= = = = =

RME-45 receiver - Covers 540 kHz to 33 MHz.
Comes with the complete SAMS Photofact including
schematic and all service
information. Open design makes this receiver
easy to work on. Case needs painting, as there
are some scratches consistent with the age of
this radio (1947) under normal use. Not terribly
bad though. This receiver uses loctal tubes and
has a two speed dial with concentric knobs.
Front panel looks excellent, but rig needs some
minor repair. All parts and the original knobs are
present. Will sell for $200.00

Mil surplus
LS-454/U Military radio loudspeaker unit with cable.
Excellent condition. Will sell for $10.00 (ONE ONLY)

Mil surplus
LS-519C/S1C Intercommunications System with
provision for switching contacts with up to
ten remote stations (none included) Has built-in
speaker, and weatherproof covered mic jack.
Controls for VOLUME, 10 S.S. pushbuttons for
selecting units to monitor or contact.
Switch for "Hands Free / Listen / Talk."
Control for OFF/DIMMING.
Will sell for $90.00

Lafayette Tube Tester, model TE-55. Nice little
compact tester in vinyl covered case.
Very good condition. No documentation. Will sell for $35.00

From: Nico van Dongen <nico.vandongen@compaq.com>
Message-ID: <88rjiu$f3v$1@mailint03.im.hou.compaq.com>
Source record: 70857

I have a W.W.II German army CW key and a W.W.II British Air Ministry Morse key for sale.

The Germany key is a type T1SBF and it has the German eagle stamped on the base plate and apparently has never been used. I have a picture of the Key available that I can Email.

The British key is labeled: AM Type B. Ref No5c/372 Switchbox Identification.
It was used on the Spitfire but also on other planes of those days. It was used to key the Navigation and/or Landing lights for identification purposes when radio was not available or not allowed. The key is made of Bakelite, round, 3.5" in diameter and 1" thick. The key protrudes out of the front just below two lever switches marked Downward and Upward respectively. The switches have three positions: Morse, Off and Steady. The key is in very good condition and I doubt if it is ever been installed. The knob of the key is made of copper or bronze or something like it and the paint came of a bit, but that can be restored in 5 minutes.

Should you be interested, I'm asking 75$ per key, shipping from Holland will be 20$ when sent together.

I just acquired this transmitter in pretty good condx. It needs a good cleaning to remove some of the years of grime. The cabinet has some rust so it will eventually need to be repainted (matching paint???). Are there any other 200V owners out there who could share their restoration experiences or provide hints and pitfalls with this transmitter? Any critical elements to check before I slowly bring her up on a variac?

Thanks in advance,

John - NU7F

Hello--
The relatively modern Sony AM/FM clock radio in daily use on our nightstand
has a harmonic-rich LO that provides SWL surprises. This can be annoying, except
on those evenings when the AM BC band goes dead<g>.

Source record: 70882

Hello group, has anyone the compactron Adaptor, Hickok part # 1704 or an equivalent that they can part with reasonably ?

Please respond privately if available.

It would be nice to test compactrons for gM with one of the TV-7's here.

BTW, got the tip for this off of the following page.

If you run a TV-7, check it out.

http://www.geocities.com/SiliconValley/6992/tv7.htm

Regards,
Joe Pratt, Tubecntral@aol.com

> provide
>
> thanks

Hello--

IIRC, the ARB's frequency range is 195 KHz to 9.05 MHz and operates from 24 volts. The
tube complement includes 12-V tubes connected in series-parallel: 12SF7 RF, 12SA7
convertor, (2) 12SF7 IF amplifiers, 12SF7 BFO/audio/detector(?), 12A6 audio output.
A 24V to 250V dynamotor produced B+; a motor drive controlled tuning (for remote
controls).

The antenna circuitry would support either a loop antenna for
direction-finding or a long-wire
antenna.

The June 1958 issue of CQ mag covered conversion to amateur apps.

Your ARB may have already undergone conversion-- complete or partial-- judging by
the 12-V dynamotor.

73,
Brad AA1IP

The CK6088 and 1AD4 are "pencil" tubes; they're subminiature tubes
(don't know about the CK6397). I just bought (came Friday) 20 CK6088
for $0.25 each (from Murray Pasternack, who post messages on this group
periodically). I believe he had some 1AD4s for a dollar or two.

I didn't mean to step on anyones toes here. My observations came with comparing performance and quality of construction side by side with the R-390/As. There's no doubt the R-392 does receive, but then on the other hand so does an S-38 :-)

Bottom line, if the new owner enjoys it, by all means keep it!

It's a personal option, which is best, the 390A or the 392.
They're basically similar, in that they're tube dual conversion
receivers, with identical (mechanically) VFO, RF and xtal decks.
They have different IF, AF, pwr supplies, and packaging.

Each one has its pluses and minuses. IMHO:

390A

+ Sturdy
+ Stable
- Funny antenna connector and impedance.
+ Nice mechanical filters.
- Fragile mechanical filters.
- Radioactive meters.
- Makes your wrists hurt.

392

+Very sturdy case.
- Olive drab doesnt match anything.
- Marginal audio output stage.
- Funny antenna and power connectors.
- Makes your wrists hurt.

3096. Re: SX-99 Problem -- Help!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-22 00:00:00 UTC
From: Gary - KJ6Q <davison7@gte.net>
Message-ID: <wDDs4.386$WI.16223@dfiatx1-snr1.gtei.net>
Source record: 70696

Depending on severity, the "warbling" you speak of is pretty common in "old technology" receivers - but since you are attempting to return to those "golden days of yester-year", you already know this?

Other than usual shock-mount methods, to mechanially isolated the receiver from the table or other surfaces that might transmit shock to the receiver, you CAN try to isolate as many vibration sensitive parts of the internal components as possible for direct attention. A prime suspect to start with, is the oscillator tube operating in the frequency tuning circuit - these sometimes are mechanically microphonic - and swapping with another tube MAY minimize the warble you refer to. While the set is on, and tune to a carrier with the BFO on, try gently tapping on tubes and individual components with a pencil eraser - I.F. cans and such to see if you can narrow down the source(s) of your problem.

I have a decent-looking National NC-57 receiver for sale. The radio is working and had its filter cap and some of the bypass caps replaced. Cosmetically, it looks fairly good....maybe a 6.5 to a 7 on a scale of 1 to 10. The plastic lens behind the bandspread dial has a piece knocked out of it, but the lens over the main tuning dial is good. All knobs appear original. I did a touch-up alignment on it, but if someone wants to get serious with this radio, it wouldn't hurt to replace all of the bypass caps and give it a full alignment. I have a copy of the manual. Asking $85.00 which includes shipping to the lower 48. Please e-mail me if you have any questions. Thanks for reading.

George - the R-392 has the "radioactive meter" also. For some reason, though, they didn't seem to hack the meters out wholesale on the '392.

You neglect to mention the R-390, which, IMHO, is leagues ahead of both the '392 and the '390A. MUCH better sound, and L/C IF filters. Each has its idiosyncracies - fer instance, right now I have 2 R-390s and a R-391, all have dirty bandswitches. My R-390A's bandswitch is in FB condition. My R-390A, though, had a leaky mechanical filter that allowed B+ to leak thru to the grid on the other side, totally messing up the AGC.

SOme other minuses:

No product detector
Crummy noise limiter
That STUPID 3TF7 filament so-called "regulator" tube (forget if the R-392 has one of these bastards - IIRC it does)
R-392 has a bazillion screws in the front that need to be removed to service the radio

IMHO, the R-392 is 90% of a R-390 - only uglier. They're all OUTSTANDING radios.

73 John

Hi to the list,
Does anyone out there know of a source for IRC resistors? I need 4 of them,
IRC # PW-5168. They are 30 watt, wirewound, center tapped 25k ohm. I have
tried several times to get an answer from IRC and Ohmite, but NO response.

Thanks for the space
Mike/WB6VSE

Congratulations on acquiring one of these wonderful old rigs. I would
urge you to join the central-electronics mailing list. There are
currently about 40 subscribers with very little traffic on the list.
There are several subscribers who are currently working on 200V and
100V restorations. I'm sure you will find help and encouragement as
you work your way through your project. You can sign up at
http://www.qth.net/ While you are there have a look at the Archives
of the list for some good references on the 200V.

>> connector?
>>

The LS-166 was the correct speaker for the R-392, and can be driven directly from it. However, the radio is capable of much better sound than the rugged LS-166 can reproduce, and I would take the output from the speaker transformer in the LS-166 and connect it to a reasonable little 8 Ohm bookshelf speaker.

Having had a couple R-392s, let me suggest before you go to too much trouble firing it up, these receivers are *no where near* the same class as the R-390/A series. They are an interesting adaptation of low voltage tube technology, but you probably would be better off peddling it.

Technically these are not pencil tubes, which are specialized types of
HF transmitting tubes. The tubes mentioned above are more commonly
called "subminiatures". None has exceptional value.

Source record: 70828

I beg to disagree.

I have 3 R-392's, one standalone (using it since 1982, almost daily) and two in the 2 AN/GRC-19 systems (T-195 transmitter and R-392 receiver) I use regularly on AM and CW. The performance of course is not up to that of the R-390A for absolute sensitivity and selectivity but it's not far from the R-390. I work DX with them regularly on the 160, 80, 40, 20, and 17 meter bands, as well as participate in the East-Coast "Old Military Radio Net" on 80M. I also use the R-392 for SW broadcast reception. They're very decent receivers and if I can't hear a signal with it I can't hear it on my modern ICOM "ricebox" either. A properly aligned and maintained R-392 is almost as good as an R-390 non-A model. Fair Radio and other manual vendors should have manual copies for the R-390. The LS-166 (with its original UG-77 type connector) plugs into either one of the audio jacks of the receiver. The power connector carries the audio signal also, so when the receiver is connected to the T-195 transmitter via that plug, the headset/microphone/key can be plugged into any of the 3 available audio connectors - one on the transmitter and two on the receiver. The sidetone from the transmitter is also fed to the audio connectors.

My suggestion: keep it and you'll enjoy it.

ARB:
Navy aircraft receiver. My memory isn't perfectly clear on the details. But I know for sure that in about 1956 I put one on the back seat floor of a 1948 Studebaker and ran the dynamotor off the 6v battery and took it on an important date. Of course I'm sure the girl was impressed with the headset we had to use to listen. Unfortunately, one of the audio capacitors failed and then it did nothing but motorboat until I fixed it and put it back where my father had left it, and I hoped he didn't figure out what I'd done.

Hi, Jack,

That's a pretty strong statement... may I ask if you can back it up
with specifics? While the 392 certainly doesn't have the number of
adjustable parameters that a 390 or 'A has, mine doesn't seem to exactly
be a Lafayette kit, either. What did you find so deficient in yours?

Thanks much,

Eric

3143. SX-99 Problem -- Help!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-22 00:00:00 UTC
From: Ron Evans <cosmos41@ix.netcom.com>
Message-ID: <38B2EA8B.A74C0447@ix.netcom.com>
Source record: 70832

Back in ham radio after a long hiatus, I recently bought a beautiful SX-99 to use in my Vintage Radio Station. I knew it had a few minor problems and was counting on someone with more technical expertise than I have to help me solve one or two of them.

The main problem is that barely bumping the rcvr or the table it sits on causes the cw note to warble (shift around in frequency) and then settle back down again. Just thumping the side of the rcvr has the same result. Is this a well-known problem with the SX-99? Is it the same stability problem that the SX-100 is known for?

Can someone please tell me how to proceed or where an article on the problem could be found? An answer here is great because others may have the same problem, but if u could email me, that would be even better for me since I can't access the newsgroups at work. My email address is cosmos41@ix.netcom.com

Thanks for any help you could provide. I really want to enjoy the old "gal" the way she was meant to be enjoyed -- "singing" rather than "yodeling." *grin*

It is usually bronze. Most "real" hardware stores either carry it in stock or can order it. You can get in a storm door repair kit or by the roll.

Greetings everyone!

About a week ago I read a reply to someone's post pertaining to SX-42 and SX-62 problems. The author of the reply referenced problems specific to the SX-42 and, if I recall correctly, offered to provide useful insights, suggestions, and information that I would now find of considerable value.

Naturally, I deleted the message before its value sunk in and so this is a plea for someone to pass a copy to me or for the author of the aforementioned message to contact me directly.

I have a SX-42 that probably needs some of the TLC and preventative maintenance referenced in the post.

I've got a 5U4 in an old radio that does the same. Glows blue/purple throughout the inside of the glass envelope, but then as it warms up over several minutes, the glow disappears. This almost seems to be a gaseous discharge but does anyone know why would it go away when the tube is hot?

>

I'm sorry, but I have to respectfully disagree. My R-392 works just great, and I have both an R-390 and R390A, so I know what they are capable of.

The 392 is more comparable to the 390, as it does not employ mechanical filters. It has the advantages and disadvantages of cascaded LC circuits. Not as selective, but not as harsh either, and it doesn't ring. If one is sufficiently dedicated, you can stagger tune the IF to obtain the desired passband characteristics.

Since the frequency conversion / VFO scheme is like the 390, Settability, stability, dial accuracy, and dial linearity are essentially the same.

I think the low plate voltage tubes do have a tendency to promote cross-modulation, but as far as sensitivity is concerned, the rig is just fine. Noise figure isn't particularly relevant in the HF bands.

Construction quality... just look inside one. Cost was no object.

Considering the design requirements for size, ruggedness, performance, and even "immersion", the receiver is an incredible engineering achievement.

3169. FS: Handcrank Generators

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-23 00:00:00 UTC
From: Radios_R_Me@yahoo.com
Message-ID: <38b35176.6622308@news.earthlink.net>
Source record: 70713
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Hi guys - I still have a few more of these left:

Exciting novelty item: HAND-CRANKED MAGNETO
GENERATOR! Produces 120V AC.

These will provide about 20-30 Watts depending on
your cranking speed! The size is about 3" diameter
and 3" deep with a retracting handle. You can mount
these behind a sturdy front panel with a single hole
and the large nut provided.

I have some still available! Will sell for $25.00 each

E-mail me - Brian

For sale: transformers -

Stancor P-4086 Filament Transformer with high voltage
ceramic insulated terminals etc. 115V AC primary, and secondary
of 5V CT at 14 Amps Measures 5.5" X 4.25" X 5.25" tall with
the secondary terminals extending an extra 0.5"`off one end.
Will sell for $17.00

7.5V at 48 A - New ADC type 842052 Transformer with
220-240 V primary. Has TWO secondaries each 7.5V CT
at 24 Amps. Measures 5.5" X 4.5" X 6.0" tall.
Will sell for $55.00

110/220V Primaries - 1225V CT at 215 mA and extra taps for
1185V CT at 200mA sec $44.00

115V Primary - 1000V CT at 300 mA $45.00

115V primary - 920V CT at 300 mA (will supply up to 500 mA DC) $48.00

920V at 700 mA upright mounting $59.00

1000V at 1.5 Amps by RCA, potted $62.00

115V/230V primary, 2340V at 250 mA by Triad Ultra.
Nice upright unit with nice gray end bells $50.00

The following are all for 115 or 120 V AC primaries:

1) 7.5V filament transformer at 51 AMPS (S) Will sell for $89.00

2) 10V at 10 Amps Will sell for $36.00

3) 10V at 5 Amps Will sell for $18.00

4) 6.4V at 50 Amps Will sell for $75.00

5) 6.3V at 6 Amps (2) Will sell for $15.00 each

uttered forth the following:

>It's a personal option, which is best, the 390A or the 392.
>They're basically similar, in that they're tube dual conversion
>receivers, with identical (mechanically) VFO, RF and xtal decks.
>They have different IF, AF, pwr supplies, and packaging.
>
>
>Each one has its pluses and minuses. IMHO:
>
>390A
>
>+ Sturdy
>+ Stable
>- Funny antenna connector and impedance.
Not a big deal, I've got plenty of C connectors
>+ Nice mechanical filters.
>- Fragile mechanical filters.
>- Radioactive meters.
I'd call that a plus, you can see them in the dark. No hazard unless
you lick the paint.
>- Makes your wrists hurt.
Part of the fun!

-Takes up too much space
-Overpriced
+Good investment
>
>
>392
>
>+Very sturdy case.
>- Olive drab doesnt match anything.
Then you either need more green radios, or stick to civvie stuff.
>- Marginal audio output stage.
Ya got me there.
>- Funny antenna and power connectors.
>- Makes your wrists hurt.
See above response.

+Waterproof
+Fits better in your jeep, or truck

Really depends on what you like. I'd have both if I had the space (or the $$$).

You can get bronze screen (and many other metals) and also perforated sheet metals at any decent industrial supply warehouse. Look in your local phonebook for metal supply, sheet metal, screening, wire cloth. In Southern California, I would try a company like W.W. Grainger.

3183. Q. Shunt resistors for the Viking II?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-23 00:00:00 UTC
From: cacutts@mindspring.com
Message-ID: <890quksrl1@nntp4.atl.mindspring.net>
Source record: 70727

All,

I'm in the process of fixing the readings that I'm getting on my meter in my Viking II transmitter. There seems to be a total of five shunts and the parts list shows them as:

SH1-SH2 100 M.V. Shunt for 500 ma
SH3-SH4 100 M.V. Shunt for 25 ma
SH5 100 M.V. Shunt for 50 ma

If I've done my math right, should I get the following resistors to replace them:

SH1-SH2 0.2 ohm, 1%
SH3-SH4 4.0 ohm, 1%
SH5 2.0 ohm, 1%

Have I got that correct or am I missing something? Thanks in advance.

Transformers with suitable voltage and current ratings for building
tube amplifiers are getting scarcer and more expensive. There are some
current-production alternatives, but not many, sometimes the quality is
questionable, and they are not cheap either. :-)

3186. Can you ID? Looking for old radio...

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-23 00:00:00 UTC
From: nw7us@hfradio.removethispart.org
Message-ID: <KATs4.1303$pK3.28715@sea-read.news.verio.net>
Source record: 70730

Hi,

When I was younger (maybe 15 years ago), I had a surplus military communications receiver. I am trying to remember what it was, so that I might track one down and have one to operate again. The thing is, I have yet to figure out what the model and make is.

So, perhaps if I describe it to you, you might know of it.

Here is what I can remember:

The face of this radio was OD Green. Very military. White letters. Black knobs. The tuning window above the locking dial was a half-moon. Inside, the dial was a round plate with all the frequencies, and ticks, marked around it. When tuning, you only saw part of this dial through the half-moon, that also had a vertical line to show what freq you were on. Each 1 MHz was roughly one row (band) on this dial.

Also, looking inside, the tank circuits were contained in a drum, so when you switched bands, the whole round drum rolled into a new position with the proper tank circuits. Along the side of this drum were tubes, and then a level under and around, you found other tubes, etc.

It had CW, USB, LSB, and AM. It went from BC to 30 Mhz. It had a narrow and normal filter, I think.

Any ideas as to what this radio is?

Thanks!!

(remember to change my email address when replying direct)

>IMHO, the R-392 is 90% of a R-390 - only uglier. They're all OUTSTANDING radios.

I agree, I also like the LC filter sound a bit more than the mechanical filter swishy ringing business.

Oh, I forgot another bunch of pluses and minuses for the 392:

+Uses standard bayonet-base pilot lights.
+ "Bright setting is too bright, "dim" is a tad too dim.

(Purists avert eyes NOW)

+ You can directly plug in 40763 MOSFETS into every RF/IF socket and the radio will work just fine. Just crimp some DB-25 pins to the leads and
pluggem in. (No particularly good reason for doing this-- the tubes are cheap and
last forever). Don't try this on a R-390(A)!

+ There's just enough room behind the front panel for a 24V power supply.

This is the hinged top cover and rear (vented) portion of an HRO-50T's cabinet (I think that both the hinged top and the rear vented panel are a single assembly, joined together by the hinge, but they may separate).

Need not be in absolute mint condition, but at least clean and free of any rust or corrosion, with original paint.

e-mail to: cking4@ford.com

In article <38B2EA8B.A74C0447@ix.netcom.com>, cosmos41@ix.netcom.com says...

>Back in ham radio after a long hiatus, I recently bought a beautiful
>SX-99 to use in my Vintage Radio Station. I knew it had a few minor
>problems and was counting on someone with more technical expertise than
>I have to help me solve one or two of them.

>The main problem is that barely bumping the rcvr or the table it sits on
>causes the cw note to warble (shift around in frequency) and then settle
>back down again. Just thumping the side of the rcvr has the same
>result. Is this a well-known problem with the SX-99? Is it the same
>stability problem that the SX-100 is known for?

>Can someone please tell me how to proceed or where an article on the
>problem could be found? An answer here is great because others may have
>the same problem, but if u could email me, that would be even better for
>me since I can't access the newsgroups at work. My email address is
>cosmos41@ix.netcom.com

>Thanks for any help you could provide. I really want to enjoy the old
>"gal" the way she was meant to be enjoyed -- "singing" rather than
>"yodeling." *grin*

If it's any consolation to you, I have an SX-100 that has the problem you have described here. I posted the question several months back, and it was suggested to me that the root of the problem is poor contact between the brushes and the shaft of the rotor side of the tuning and/or bandspread variable capacitors, and that cleaning these surfaces (without doing anything to upset the tension at which the wiper contacts make contact with the shaft) will correct the problem. I have not actually got round to trying this out myself, however -- once we get moved into the house in a couple of months, though, I'm going to dig this radio out of storage and take a closer look at this.

3198. TRADE: HAMMARLUND HQ-170

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-23 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <38B465DE.C0AB84B4@ix.netcom.com>
Source record: 70742
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I have a nice Hammarlund HQ-170
available for trade only at this time- trade only, please.
It's *not* "mint" (I don't believe in "mint."
Something is "mint" if it's still in the unopened package),
but it is pretty.

First the negatives-
Most of the bands require you
to put the graticule way over, so it needs alignment for frequency.
All the bands sound good except 80 mtrs, where signals seem low to me.
Probably alignment here, too.
Seems to take a long time to warm up
and settle down on 20 meters and up.
I've been told this is an old cap
in the Osc. section, but I don't know.
I don't think the bandswitch knob is correct. It's round.
All the others look "right" according to photos I've seen.

Now the positives-
I call this one a fair 8 out of 10 cosmetically. Looks good
and I will send photos for serious inquiries. Chassis is dusty
but not "eat up." NO smoker stains. 12-hour clock is quiet and
works- looks original. S-meter works. All the knobs and functions
work. Back cover and skirt clean and nice.
Bandswitch clean and free moving.
If you're recreating your novice station,
this one will "show" well.
And the audio sure sounds good.

I'm interested in the following
clean condition, unmodified trades
(no dirty "projects," please):

Command Set Radios, Good condition, *unmodified* ONLY:
T-15/ARC-5, T-16/ARC-5, T-89/ARC-5, T-90/ARC-5 transmitters.
RAT, RAT-1, RAV receivers (ranges 9-13, 13-20 and 20-27 MCs).
BC-942 VHF receiver. Looks like an R-28 but is marked:
"SIGNAL CORPS U.S. ARMY, BC-942, Western Electric."

Infantry Portable Radios, Good condition, *unmodified* ONLY:
BC-148, BC-151, BC-156, BC-474, BC-669 (Hallicrafters only).

Will discuss other, similar trades
(I have no interest in anything modern
or any tubes other then resellable audio tubes).

I will ask to swap photos.
If no trade interest, it will go to "the bay."

3200. WTB Beginners 10-80 rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-24 00:00:00 UTC
From: Jim Markitell <jmarkitell@iristech.com>
Message-ID: <38B57672.7111A932@iristech.com>
Source record: 70594

I'm looking for a working x-ceiver 10 to 80 meter bands. I need a 120 volt model, the smaller the better. Looks are unimportant, just as long as it works dependably and has a decent output. This rig will be used while I'm at sea, probably in the North Atlantic. This rig will need to fit easily into my suitcase. I will also need an antenna, however I could possibly make a 20 mtr. long wire, I'm worried about it brushing against the ship's hull, so a magnetic mobile antenna might be best....open to any suggestions. I will probably have to hang this over the side of the ship, as access to the top is intermittent, and a permanent antenna is not possible.
 In short, I need an old functional transceiver and antenna that is small enough to be packed into a suitcase. The entire assembly must be easily portable. Any and all help is appreciated. Please e-mail back, as this group is hard to access from my ISP sometimes.

Source record: 70595

The Third Edition of the "Radio Amateur's AM Note-book" is now in production. For those of you who aren't familiar with this book, it is a collection of great DX100 and Apache mod info, in a comb-bound (cirlox) book, 100+ pages. This resource consists of extracts from every Apache and DX100 mod ever printed in CQ, QST (Hints & Kinks) and 73 mags, as well as most mods performed by many hams over the years.

The "piece-de-resistance" is the complete mod seminar and instructions by Tim Smith, WA1HLR on the Apache and DX100. This is a 90 min. stereo __audio__ cassette. This last item, the "Tim-Tron Mods" are the last and best of all mods - best results, best performance, and actually the easiest and simplest as they're done in stages, each modification stage allowing the rig to go back in service after each basic mod. The rig doesn't end up sitting on the bench waiting until the whole mod is done. You can do each basic step in one evening, and still put the rig back on the air between each advancing stage of modification. You can do one or do them all and at the end of the last one, you have a high-performance, Turbo-modulated, Hi-Fi transmitter. Very neat and interesting.

This "Radio Amateur's AM Notebook" comprises several sections: DX-100/Apache mods, Asymmetric modulation theory and practice, including circuits, Ultramodulation theory and practice with circuits, negative-peak clipping theory, etc., plus historical material on W3PHL and others who developed these techniques. Also, there's the "Timtron Tape": a seminar by Tim, WA1HLR on mods for the DX-100 and Apache

The real problem is the time required to get the printed stuff copied. And then there's the postage, tape dubbing costs, copying cost, etc. etc.. I'm quite willing to do all this because this resource is so great, that I feel it's worthwhile doing and I believe the BA/AM community deserves this stuff. I'll try and allot some time in the New Year get it done, at least in

stages. I expect the finished,
ready copies to be available around the end of March. The cost will be
$18.00 US or
$20.00 Canadian. This price simply covers the costs of production and
shipping only.

If you're interested, please email me with you name and snail-mail address.

Herr Michael OM,

English is the closest thing to a universal language we have in the
the developed world, particularly in dealing with technical terms, and
is the most common second-language of most countries. Posting to a
clearly English-speaking newsgroup in another language is not likely to
get the responses hoped for. After all, that person must have read the
newsgroup (in English) before deciding to post to it. Just common
sense, yes?
I would guess that the language spoken by the largest percentage of
folks on earth might be Chinese.

Don, W6JL

The same is true for posting English an a clearly non-English newsgroup.
Unfortunately most native speakers of English fail to understand this.

I see no reason why it shouldn't be OK to use German language on an intenational newsgroup, and - particularly when the title is written in German

I've been critized for requesting more German bulletins on packet radio to @EU, and this is mentioned in a Dutch bulletin I discovered the other day. This is particularly good when you get bored that most English bulletins has little interest, perhaps some more interesting notes if we allow German language messages.

It is an international group, and as I am particularly interested in German equipment in contrast to the Western rubbish it might be a chance to have some more information about this

German language is understood in most countries in Europe, so I really do not care whether some silly americans understand or not, most of them understand only one language, while most of us in Europe (outside England) understand at least two and very often three or more languages

Mike - that would be me.

I've resucitated 6 or 7 of these beasts throughout the years; out of the last 5, 4 had bad output transformers because the caps in the tone circuit shorted. If you look at the schematic you'll see why, if one of these caps shorts it essentially grounds the B+ thru one leg of the output xformer thereby blowing that winding.

If you do NOTHING else to the radio, replace all the caps associated with the tone circuit and connected to the plates of the 6V6s.

Other hints:

Replace the bypass caps in the front end - this'll improve sensitivity especially on FM. This is a pain, but definitely worth it.

AVC problems can be traced down to bad resistors or leaky caps. Resistors >500K seem to want to change value much more than lower value resistors - check these first.

IF alignment is a pain on the '42 with its xtal filter. Follow the alignment instructions to the letter and be prepared to repeat it several times to get it right. Set the sig gen on the crystal freq (by turning on the xtal filter and tuning the sig gen for a peak) then set the IFs, keeping the sig gen on the same freq. FM alignment *can* be done w/o a sweep generator if you're careful.

Clean the wipers on the tuning cap - this will cure the scratching and frequency jumps while tuning.

If you need other hints email me direct.

73 and good luck - John

I will bow to Mr. Bonds' wisdom when it comes to these critters -- he helped me bring my long-suffering SX-42 back to life some time back. If you have web access and don't mind waiting for a few pictures to appear, the following web page gives more details on that particular story. It took me a while, but eventually there was a happy ending :-)

http://antiqueradio.org/halli07.htm

Phil
philnelson@antiqueradio.org

P.S. Some day I'll get around to taking some new photos showing the restored cabinet and faceplate!

Hi,
Thanks for reading my post.
I bought this radio with the intention of restoring it but don't have the time.
It appears to be complete. I'd rate it at a 7+. I will include an extra set of finals and an extra driver. No mic or manual but I think they are still available on the web.
The two pieces are heavy. I will carefully pack, insure and ship to the lower 48 for $115.00 for both or you pick-up in Springfield, IL (or 100 mile radius) for $100.00.
Bill Hart, KB9UWZ

3220. Re: Those "Rare" Old round pin power cords

From: Crazy George <munsch@attglobal.net>
Message-ID: <38b5d1cc_4@news1.prserv.net>
Source record: 70614

Wheeee!
Since I learned that these are "rare", I have been pulling them from various boxes of power cords at sidewalk sales and other clearances. I haven't seen any of the white ones, but I found a 9 foot one in bright yellow. Anyone else ever seen a long yellow one?
BTW, I keep all the locals supplied now whenever an old HP unit shows up. I estimate I have about 50 cents invested in each. I don't like the Belden gray ones, instead prefer the OEM black which were never cataloged that I could find.

> inefficient Rat-Shack 24V 1.2A, transformers,

...you ran that thing on 1.2A?? I assume this was after
your FET substitution, right?

Fortunately, mine came with a hefty Lambda 28V power supply.
The supply itself may need a little work, but it's a nice
starting point.

I don't mean to put the poor guy on the spot, but I am still
curious about what Jack Taylor (n7oo@theriver.com) found so
deficient in the R-392.

Thanks all for the info I've gotten so far... I have two
specific questions now:

1) Does anyone know of a high-quality 12VDC->28VDC converter
on the market? Makes portable operation more efficient than
going through an inverter back to a power supply back down to
28V.

2) Is there any restriction -- such as temperature constraints --
against using the thing in unusual orientations, such as the controls
facing straight up? I'm particularly concerned about temps in the
thing and how they affect all those tuned stages...

Thanks again,

Eric

I have the following parts for sale. Too much stuff, not enough basement. Shipping (from 19087) is not included. Prices shown are asking prices for single units - let's make a deal! Big discounts on quantity purchases. Shipping weights are estimates - you pay only actual shipping charges,

Cardwell JP-48-GD - Split stator variable, 48 pF max. per section. 7 rotor and 6 stator plates per section, .070" spacing. Ceramic and micalex insulation, end plates are ceramic. 3" high, 2-1/4" wide, 6" deep, with 1/4" shaft extending 3/4" from one end. Used, good condition. Shipping weight 1 pound. Asking $3.

Cardwell 7103 - Single section variable, 150 pF max. 20 rotor and 19 stator plates, .070" spacing. Ceramic insulation, end plates are metal. 2-5/8" high, 2-1/2" wide, 6-1/2" deep, with 1/4" shaft extending 3/4" from one end. Have two identical units - one NOS in original box, one used, very good condition. Shipping weight 1 pound. Asking $7 for new one and $6 for used one. $12 for both.

500 pF Cardwell transmitting variable - Single section variable, 500 pF max. 25 rotor and 24 stator plates, 1/32" spacing. Micalex insulation, end plates are metal. 2-1/8" high, 3" wide, 4-1/4" deep, with 1/4" shaft extending 5/8" from one end. Used, fair condition. Shipping weight 2 pounds. Asking $3

450 pF Hammarlund transmitting variable - Single section variable, 40-450 pF. 24 rotor and 23 stator plates, ,070" spacing. Ceramic insulation, end plates are metal. 3-1/4" high, 4-1/2" wide, 7" deep, with 1/4" shaft extending 1-1/2" from one end. Used, good condition. One of the four ceramic insulators that hold the stator is chipped, has no effect on operation. Shipping weight 3 pounds. Asking $10

Big old 3 gang BC tuning capacitor - This is an ancient unit, origin unknown. Rugged heavy duty construction. Front and middle sections have 13 rotor and 12 stator plates, 20-450 pF. Rear section has 16 rotor and 15 stator plates, 20-500 pF. 2-3/4" high, 3-1/4" wide, 5" deep, with 1/4" shaft extending 1-1/2" from one end. Used, dirty and dusty, but tests good, bearings are smooth and can be cleaned up. Shipping weight 2 pounds. Asking 25 cents, or free with any order.

ARC-5 Parts from "Command set" transmitters and receivers:

Oscillator tuning capacitor #5032 (from transmitter) - Single section variable, 30-150 pF. 16 rotor and 16 stator plates, .0625" spacing. Has beautiful 100:1 reduction gearing with antibacklash gears, but no dial. 2-5/8" high, 4" wide, 2-3/4" deep, with 3/16" shaft. Used, good to very good condition. I have 5 of these, 3 with the flexible coupling shaft, 2 without, specify your preference. Shipping weight 2 pounds. Asking $2 each.

Oscillator padding capacitor #4990 (from BC-459 transmitter) - Single section variable, as used in Command set transmitters. Has rotor lock and temperature compensator. Very good condition. Have 4 of these, all from BC-459s. Shipping weight 2 pounds. Asking $1 each.

Oscillator padding capacitor #4990 (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. No rotor lock. Fair to poor condition, need cleaning. Have 2. Shipping weight 2 pounds. Asking 25 cents, or free with any order.

Amplifier padding capacitor (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. With rotor lock. Very good condition. Have 1. Shipping weight 2 pounds. Asking $3.

Amplifier padding capacitor (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. No rotor lock. Good condition. Have 3. Shipping weight 2 pounds. Asking $2.

Amplifier padding capacitor (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. No rotor lock. Fair to poor condition. Have 3. Shipping weight 2 pounds. Asking 25 cents, or free with any order.

3-gang main tuning capacitor from BC-453 receiver. Has padders and trimmers, no dial. Good condition. Shipping weight 2 pounds. Asking $2

Filament Transformers (all have 117 V 50-60 Hz primary)

Thordarson 6421 rectifier filament transformer. Antique upright style (from 1930s) with solder lugs for connection. Two independent secondaries: 5 V@ 3 A, 2.5 V @ 10.5 A. Used and tested, works, good condition. Price $3 (4 lbs.)

Isolation/Step Down Transformer

Stancor P-6383 - Primary is switch-selectable 210/230/250 V, secondary is 115 V. Rated 100 VA. Upright mounting, has built-in switch and 2 prong output socket. Can be reversed for step-up use. Used and tested, works, good condition. Price $3 (8 lbs.)

Meters

Meter from military I-166 multimeter. Round black bakelite case, white face with scales. 0-100 uA movement. Labeled "calibrated for use in steel panels". Price $5 (1 lb)

5687 tubes - These are an industrial dual triode. Have at least two dozen, all test good in Hickock 6000A transconductance tester. Asking $1 each, 6 for $5, 15 for $10.

Please feel free to email with any questions, and to make an offer for some or all of this stuff. More to come, too.

2/23/00

Hello Doug,

I have several of these units. They are in "remote storage", so I will have to dig them out to give you a detailed description.

Most of them are in good shape, but all of them are missing some internal parts - none are 100% complete. But they can be fixed up if you can find the parts, or used to fix up others that have been cannibalized. Are you interested in such units? If so, I will dig them out and give more detailed descriptions.

Found an old chassis at an antique shop last night. Bought it for a buck. No cabinet, speaker, dial, the power leads are rotten, covered with dirt. Got to looking before I parts it for the variable and tubes.
Plate on the chassis says Zenith Radio Corp. with a number - N211348.
Chassis is 10 ï¿½ by 7 inches.
Has three 15 tubes and one 38. All four tubes are still intact.
I figure it has got to be pre-WW II AM radio. Anybody have any ideas as to what model it might have been?

Source record: 70668

here is a NOS 2-450A it is manufactured by UNITED ELECTRONICS CO the same co
that made eimac tubes this is a rectifier tube 13" tall and i put a tape around
the tube it measure 13" the price for the tube is $39.95 it is a real nice
looking would make nice addition to the collection orignal box and packing
these were mfd some where in 1969 that is the code date on tube buyer pays
shipping $3.20 priority mail this tube is a rectifier not a rf amp output
if interested i can send a pic of it thank's del k9fcm

3240. Viking Valiant Tune up procedure Needed.

Newsgroup: rec.radio.amateur.boatanchors

Receive / Standby Switch
Headphones input.
S-Meter
Bandspread Window
Mc/kc Window

Picture at:
http://www.qsl.net/hca/sx24.jpg

Original S-meter not present but has NICE
Hallicrafters SX-99 S-meter in place. The set has a
missing output transformer (easily replaced),
but appears to be complete and could be made to work
with minor repair. Has all original knobs and the
front panel shows well. The cabinet has the
cool-looking louvres on the sides, which match
the speaker used with both the SX-24 and SX-28 series.
If you already have the speaker it will look really
great with this radio.
Comes with the schematic diagram.

Will sell for $185.00 plus shipping

WOW!

If you got a 51J-4 for C$100, and it was any time in the past 10 years, you got one great buy (and the guy who sold it to you was either very charitable, or didn't have a clue as to its real value). Those receivers in very good condition are going for about US$800--and I've seen them as high as $1,200,and that's without the speaker, but usually with all three mechanical filters.

Icom 781 HF rig with built in tuner,built in scope,built in power
supply. 150Watts, Does full
power, I put it on a dummy load and it puts out 150 Watts. Comes
with Manual,Power Cord.
No original box and no mic comes with it. This rig works 100
percent
and the scope is nice and bright. The metal cabinet that goes around
it has a few touch ups on it.
The serial number is: 01779 As I stated, everything works
GREAT. Of course this would be double boxed
and packed well.

2,675.00 Or trade for
GM300 VHF and UHF Mobiles
of equal value or Spectra Mobiles VHF and UHF. Ham Gear,
Also looking for Collins Gear. Just let me know what you have.
Reply Email.
Thanks for reading,Rich.

Posted on behalf of Frank Lenze VE2LNZ
flenze@captelco.qc.ca

Frank has a almost-Mint, still in the original box FPM-300, which he'd like to get operational. Seems this rig has a small problem -- one of the mixer coils became damaged during an initial check-out (???), and because of this, the rig has never seen use. Frank picked up the rig several years ago from the distributor.

The part in question is the 9Mhz coil used in the mixer stage.
Part# 050-004358 Ref.Symbol # T405 Desc.: Coil, IFT, 9 Mhz.

Anyone have a parts unit, or possibly an equivalent part?
Or possibly a source of a suitable replacement?

You can contact Frank, VE2LNZ at 450-688-5173,
email: flenze@captelco.qc.ca

3249. Ranger VFO Problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-24 00:00:00 UTC
From: mlangen@earth.execpc.com
Message-ID: <38b54788$0$46059@news.execpc.com>
Source record: 70678

Anyone want to take a shot at the following quirk? My Ranger's VFO will sometimes jump a couple hundred cycles (and either stay there or wander around a bit before settling down) when switching the meter from plate to grid or from plate to mod. (Problem is apparent on all bands and in both tune and operate modes.) Everything seems mechanically stable, and I can't seem to induce the problem any other way. Is R3 about to expire, or am I overlooking something else?

Thanks,

Mark WA9ETW

3250. DX-100 tips

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-24 00:00:00 UTC
From: Lane Ku7i <Ku7i@worldnet.att.net>
Message-ID: <4Vbt4.11147$PA2.946883@bgtnsc06-news.ops.worldnet.att.net>
Source record: 70679

Fellow Followers of Hollowstate,
I picked up a Heathkit DX-100 locally. I will be taking the cabinet in to R.W. Little on Pacific Coast Hwy for a sandblasting, priming, and powder coating. Last cabinet I took to him was a 75A4 cabinet and it cost abt $50 + tax. Not bad!! I will need to do some minor restoration on the xmtr. The front panel as-is looks pretty good. No gauges, major scratches, holes, dents, rust, etc. Should clean up really sharp!! The underside of the chassis LOOKS NEW but the top is layered with 15 years of dust, dirt, and grime from sitting in an outdoor shed. Thank God it was in San Diego and not Buffalo, hi.

Questions: Are there any mods that I should know about? I will be going via the online ER index but it is quite extensive and will take some time. I heard that stock the audio is outstanding and a solid 100 watts of plate modulated carrier.

So if there are any mods that are known I would like to hear abt them. I also need to find a manual. Guess I will have to order one from W7FG or Hi-Manuals.

Last night on the west coast AMI net on 3870 khz at 0500Z I heard a Boise, Idaho station check in with one and listening on a HQ-180A. He sounded marvelous with the D-104 he was using.

Anyway, the search is over. I have decided to run with the DX-100 and that will be my mainstay BA xmtr for now. Any mod info greatly appreciated. Oh BTW the same fella sold me a maritime commercial amplifier running a pair of 3-500Z. Six channels that cover 2-30mhz. That will be the 'shoes' for the DX-100.

73s and have a good day.

Lane
Ku7i
San Diego (AMI number on the way, hi)

Source record: 70681
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

For Sale, a Heathkit SB-301 receiver with 400 Hz CW filter
and matching SB-600 speaker. Both are clean, with minor
wear and edge chipping on the cabinets, and are in working
order. I got these from an estate sale. Receiver works
on all bands and alignment seems to be good. The crystal
calibrator works. CW filter works. Copy of the SB-301
manual is included, and I might have a copy of the SB-600
manual somewhere too. Price $150 for the pair, plus UPS.

From: k5dh@raytheon.com
Message-ID: <7Act4.167$qw5.14574@dfw-service2.ext.raytheon.com>
Source record: 70683
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

For sale, a Heathkit SB-600 speaker unit. Paint has edge chipping
and some noticeable wear, and there's a brownish discolored area
on top from an overheated HP-23 power supply that used to be inside
the cabinet. Speaker is original and works fine. This is a decent
speaker to go with your SB-line gear, but it is not what I'd call
"collector grade". I've priced it accordingly... $35 plus UPS.

73,
Dean, K5DH

From: wire2liv@in-tch.COM
Message-ID: <38B55444.67C8@in-tch.com>
Source record: 70686

I am a day or two behind on reading the list, but had to add my 2 cents worth on the 392. I have 4 of these receivers and have a hard time contemplating getting rid of any. I have several 390A's that will be long gone before the 392's will be. The last one I got I had to dig out of the dirt floor of an old storage building where it had residing for some time. I could see only about 1/2 of the face of it and the rest was underground! I brought it home and hosed it off in the front yard, let it dry in the sun, and then applied the voltage. It worked great! (Try doing that to the 390's). I'm not saying that the 390 series radios are not fine sets, but for the rather limited trade offs between these and the 392's I'll take the latter. They do like 28v as opposed to 24 on the audio and I have found that the SS audio module is a nice addition to this fine set! Smaller, lighter, tougher, and a true piece of work!

ON the OTHER hand, it takes a large helping of "dense" to break into a group - on the air OR in a newsgroup, where the language being used is CLEARLY english, and THEN try to speak in a foreign language! All that needs to be done, is READ thru the group to see what's going on, what issues are being discussed, and WHAT LANGUAGE is being used BEFORE entering! If desperate for needed help, find a TRANSLATOR to assist you, don't expect or demand that YOUR inability be binding upon all others!

IF you were traveling in China, and stepped into a restaurant for a meal, would you become upset because no one there understood your order? Would you expect everything to come to a halt, or everyone to now start speaking English just because YOU were there? What happened to common sense?

Can't speak for others, but *I* would sure avoid breaking into a spoken OR written conversation being conducted in Chinese, because *I* don't SPEAK or READ Chinese - NOR would I then criticise THEM because I considered THEM inconsiderate of MY ignorance...

Takes all kinds...

I tried some Sola isolation transformers recently but they had a very loud buzz. one was worse than the other but both were far to loud to be any where near a sound room. Of course I don't know that this is true of all there transformers but beware if the seller has not tested them and will not let you return them. Also the instruction sheet that came with them warned of strong magnetic fields emitted by them.

As you perhaps already noticed from other replies on this topic, the om who posted the initial statement wants to BUY a SGC 230 tuner. He posted his question to several newsgroups linked to antennas etc.

1. I'm german, so I could reply

2. I have a SGC 230 so I could reply, but I don't want to sell it

3. If I wanted to sell my SGC 230, this newsgroup would be about the only way to get my attention since this is the only antenna-linked newsgroup I read in a regular manner.

4. Possibly the sender does not speak english, but since this group is INTERNATIONAL, what from my point of view does NOT exclude GERMAN READERS I don't see any reason why not to ask a question in german.

5. From practical standpoint it is much easier for somebody in germany to buy the tuner from somebody in germany than from somebody in the U.S.

6. Posting the question in english would increase his chances, but posting in german does not put the chances to zero

7. I don't understand all discussion and just want to mention that I didn't notice a similar reaction to the (was it dutch?) "draadantenne" (or similar) posting a week or two ago. Is it the german that bothers you guys so much ? Perhaps you didn't notice it, but WW II is over, Hitler is dead and we are both in the NATO.

8. I hope that US politicians will continue spending some time on thinking how one can keep teenagers from running around with a pump gun and killing their friends in school or elsewhere. If they want to do so, they can do it on the PC.

Ralf

3270. FA: Collins KWM-380 Keypad and Filter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-25 00:00:00 UTC
From: jbr101@my-deja.com
Message-ID: <896ltg$5b4$1@nnrp1.deja.com>
Source record: 70499
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have a Keypad for a Collins KWM-380 for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=263640124

and the blurb is

This is a mint-condition keypad for the Collins KWM-380 transceiver.
Enables direct frequency entry from the keypad, storage of displayed
frequency into one of 10 memories, recall of frequencys stored in
memory, and "stepping" through the frequencies stored in memory. The
stepping feature is especially nice for contesting. This is a heavy
metal brute, weighs around two pounds and mounted on a rubber slab so
it stays put on your operating table. Comes with documentation, cable
and connector all ready to plug into your '380 and go. This is in
like-new condition, owned by a non-smoker who rarely used it. I honestly
don't think you could tell it from new. The last time I saw a KWM-380
keypad advertised retail it was close to $300; I don't even know if
they're still available anywhere else but right here on good ol' eBay.

Check my other auction for a KWM-380 SSB filter:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=263661321

Both close 2/27/00.

Thank-you.

Some further information may be useful for our American friends

In Scandinavia, Germany, France, Belgium, Russia and many other
countries you often find persons having two christian names, it makes
it easier to distinguish between two persons, sometimes persons have
more names - Kings often have a douzen, but they decide which they
want to use daily. So please - in an international newsgroup - try to
understand that is not American rules only applying here!

Jan is a Dutch name, similar to John, Johan, Johannes, Janek etc

In Europe we don't address fellow hams with Mr. or Sir

3274. Free: Naval transmitter hulks to anchor your boat

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-25 00:00:00 UTC
From: Tom Bruhns <tom_bruhns@agilent.com>
Message-ID: <38B6D7E8.91E18DEF@agilent.com>
Source record: 70503

I have a couple hulks from WWII naval transmitters (HF and LF/MF). I've taken out parts I want for antenna tuner use, but there are still some interesting things left: some meters in the 0-50mA range, some heavy ceramic rotary switches, some air variable caps, some large encased mica caps, even a large coil with rotary link in the MF one. Anyone want these? Pickup only, N. Seattle/Everett area. If no interest, they go to the trash. Email me here and/or at k7itm@aol.com

Also: if these aren't heavy enough to anchor your boat, I'll toss in an industrial-strength monitor. It scans at standard 35kHz VGA monitor horizontal rate, 60Hz vertical. At least 19 inch diagonal...don't recall for sure. It was working well until its HV decided to escape and start arcing (very energetically) to the shield members. Some mylar film fixed that, but the HV divider chain that feeds back to the regulator is damaged, for sure. As I recall, the HV supply is separate from the horizontal output in this puppy (though it's been a while since I looked and I may be confusing it with another boatanchor monitor I used to have). Again, for pickup only.

Cheers,
Tom

To answer your question as to what I found deficient, the two R-392's I've had an opportunity to evaluate didn't have the sensitivity of my R-390/As. This after checking tubes and tweaking alignment. Others have told me the same. Suspect this is the reason the R-392s have *much* smaller demand and command lower prices than do the R-390/As.

Purely for what it is worth, a minor warning that those cords come in two flavours: early and late. The difference is that the line and neutral leads are transposed in the female end (round pin). The only effect is that the power switch in the equipment MAY be on the wrong lead (neutral instead of line) and when 'OFF' many leads and tie points MIGHT be still 'HOT'. This is usually not a problem, but should be kept in mind when servicing.

#1, the discussion quickly degenerated into the seeming pointlessness of addressing a clearly ENGLISH usage group in a foreign language - not likely very many would do so in a group setting at some social event - so why assume it to be correct here? There ARE other means to post here for those not speaking the language - an interpretor is only one of those - and common sense and courtesy would seem to dictate that it is the one SEEKING the info to attempt to conform, NOT the group!

I would certianly consider it RUDE and INCONSIDERATE for a foreign guest at a group function to barge into a cluster of individuals involved in animated conversation in ENGLISH, and then proceed to join in the conversation in Russian!

This "discussion" isn't so much aimed at the guy making the original post, but rather, those who seem to think his method is just jim-dandy!

#2, since you are NOT (apparently) a citizen of the US, YOUR opinion of our social behavior, Constitution and civil laws here has NO relevency - you are totally free to allow YOUR government as much control over you and your society as you choose - and we fully expect that YOU recognize OUR right an freedom to do the same with OURS! If our behavior, freedoms and laws cause you distress, you had best stay

home...

And for the record, it has LONG been illegal for one individual to murder another by ANY means in this country - and yours - but that certainly doesn't seem to stop murders from occuring here OR there, does it!

Maybe MORE laws will do the job?

Yeah, SUUUuure they will....

OBSERVATION
I am hearing a HUMmmm in my headphones when the rig is first keyed and on each key closure for three or four characters. I also noticed that the power output starts off a little higher and drops a few watts as the hum goes away.

QUESTION
Could this be a function of the capacitive power supply filter on the final plate supply? No choke, just caps.....

Should I be concerned???

IMHO, the SP600 is far and away the better of the three choices. It's a wonderful radio, and my one keeper boatanchor. I can't tell you about the different versions, no doubt someone here can. Mine is a JX26. The radio looks good, works really well, is fun to tune, and will go as wide as you wish.

The SP-600 is in my opinion one of the most 'handsome' receivers made. The main problem experienced with mine was a slight amount of continous drift. Not sure if this is a condition with all versions or not (and I forget the version I had). Was told the drift was a problem with the the metals used in the tuning capacitor. At the time my operating mode was RTTY and the drift was unacceptable, so we let the unit go.

The DX-100 is hard to beat. It uses common tubes, straight forward
circuits, pretty good components, and has pretty decent audio out of the
box. A few simple mods will make it sound great. Prices? $100-300 maybe
400 these days.

Did you actually measure the transmitted audio response of the TS-850?
Many modern day transceivers can sound pretty good. If you are willing
to deal with a 70's vintage radio, the FT-101 will do very well on AM,
albeit low power (about 20 watts). A few simple mods will make it sound
as good or better than most other AM transmitters. If you have a legal
limit linear amp you should be able to drive it with the 101 and get
200-300 watts (carrier) out.

See these.

If it is working and is in good shape, get it. The SP-600 is a good
receiver, especially for AM. It has three usable bandwidths, 3.5, 8, and
13 kHz.

Can anyone point me in the right direction to find a source for the
following resistor?

30 watt, center tapped, wire wound, 25k ohm. IRC # PW-5168

I have looked all over the place, and can not find anyone that may have some
of these. We need 4 of them desperately..

Thanks for reading.

SOLA made saturable core (constant voltage) transformers -
they will run hot and they will buzz and they emit a magnetic
field. it seems to be inherent in the saturable core
technology. I don't think you can blame this on the seller.

Sounds like mechanical shock being conducted into the VFO compartment -
as daunting as the task is, I suspect you would benefit from a trip into
the VFO, and a good application of tuner-tonic on the switch wafers and
variable capacitor shaft wipers. While you're in there, it would be a
good time to move the 2 watt 1800 ohm dropping resistor going to the
voltage regulator out of the VFO box and down under the main chassis...

3296. FS: B&W PT-2500A Amp

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-25 00:00:00 UTC
From: Alan Caplan <alan.caplan@att.net>
Message-ID: <hjmt4.4399$YG.296997@bgtnsc04-news.ops.worldnet.att.net>
Source record: 70626

The Amp will put out 1.5 kW on high
power and 900 watts on low power.

Everything is in very good condition
except the plate tuning cap. 235 pf
at 7.5 kW. If I had someone to cut
alum for new plates it would be fine.
Or the time to re-engineer the plate
tuning. Tried a 4 kV cap but when the
wattage got to 900 watts out it arched
again.

Needs someone with time to make me
plate for the cap.

Asking $750 will share shipping but
plate Xfmr must be removed for shipping.

Source record: 70628

To bid on the item, go to:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=269222095

Here's just the thing to round out your Knight-Kit collection, or to help you advance from Tech-Plus to Extra! This Knight-Kit Code Practice Oscillator is from the late '50s/early '60s. It has a "revolutionary" CK-722 transistor powering it. I tested it out before putting it up for auction and it works fine. Uses a 1 1/2 volt AA battery for power. The bakelite box is in good shape for its age. There are no cracks or deep scratches on the bakelite box. The front is also in good shape, as you can see. I guarantee this will not be DOA.

Just for your information:

At the moment we have the largest computer fare in the world here in Hannover and I just want to tell you, that I never found somebody refusing to questions of our international guests even if most of our citizens speak only very little english. Everybody tries to help as much as he can.

I didn't see anybody breaking a conversation, I just saw somebody asking in his native language, if a SGC 230 is for sale.

From my standpoint it is best to answer not if I don't understand the language.

We don't force our foreign citizens to use the german language in their private communication.

Do you guys in the US do so ?

Ralf

3303. Re: Ranger VFO Problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-25 00:00:00 UTC
From: wb9gkz@aol.com
Message-ID: <20000225074834.17860.00001860@ng-cn1.aol.com>
Source record: 70633

Remember what we learned from all the
old radio books: "use mica capacitors
in critical applications (like VFO's)....they
are stable and never break down".

Don't believe it. Suspect that your
mica's are breaking down in that Ranger
AFTER you replace the 18K resistor
and have cleaned the little bandswitch
hidden inside the VFO compartment.

I have seen these mica's break down and
short out in my Valiant. The mica's are
located on top of the compartment
and are visible if you pull the top cover.

Mica caps do not last forever (I thought
they did!). The one that caused the
grief in my Valiant eventually
turned into a 0.5-ohm resistor and took
the low-B+ to ground taking the low
voltage rectifier tube along with it!

Good luck

Might I suggest you get a copy of Fred Osterman's book SHORTWAVE RECEIVERS PAST AND PRESENT (Universal Radio 800 431 3939 about $30) or look it up at your library.
I think either a SX-73 or SP-600, because of turret, but maybe others fit the bill.

Thank you for the update... it's been nearly forty years since a young guy (me) with his Dad stopped by to pick up parts to build a couple of projects from the "Boy's First Book of Radio and Electronics".

I did a search... can it be true... 111 Jericho Turnipike is now the location for K-mart?

3306. FS: Hallicrafters SX-24

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-25 00:00:00 UTC
From: Radios_R_Me@yahoo.com
Message-ID: <38b6820c.8054661@news.earthlink.net>
Source record: 70636
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.boatanchors

The SX-24 uses 9 tubes and has 4 bands operating from 540 kc to 43.0
mc,
With calibrated band spread on the 10 ,20 ,40 80 meter Amateur bands.
And
with A.N.L, Xtal filter and Variable Selectivity it is a fine receiver
from back
in
1939.

Tube Line-up

6SK7...........R.F. AMP
6K8............1 st Detector-Mixer, H.F. Osc.
6SK7..........1 st I.F. Amp
6SK7..........2 nd I.F. Amp
6SQ7..........2 nd Detector, A.V.C., 1 st audio Amp.
6F6............2 nd Audio Amp.
6H6............A.N.L.
76.............B.F.O.
80.............Rectifier

Band������������ Freq.
====������������ =====

1������������������ 540 kc to 1.730 mc
2������������������ 1.70 mc to 5.10 mc
3������������������ 5.0 mc�� to 15.7 mc
4������������������ 15.2 mc to 43.5 mc

Band spread tuning on 10,20, 40 ,80 meters.

General information

I.F. Freq..... 455kc
Antenna impedance....400 ohms Balanced line.
Power source..... 100 to 125 vac @ 60 cycles , draws 70
watts
Special order for operation on 110 to 250 vac @ 25 to 60 cycles.
D.C. Operation..... Battery supplying "a" 6 Volts , & "b" 180
Volts
Audio output..... 500 to 5000 ohms , rear terminal strip.
Dimensions & weight ...N.A.

Front Controls

Main tuning Dial
Band Spread dial
Xtal Phasing Control
Pitch Control
R.F. Gain Control
Band Selector
Selectivity Control
Tone Switch Hi / Low / off.
A.N.L. Switch
B.F.O. Switch
Receive / Standby Switch
Headphones input.
S-Meter
Bandspread Window
Mc/kc Window

Picture at:
http://www.qsl.net/hca/sx24.jpg

Original S-meter not present but has NICE
Hallicrafters SX-99 S-meter in place. The set has a
missing output transformer (easily replaced),
but appears to be complete and could be made to work
with minor repair. Has all original knobs and the
front panel shows well. The cabinet has the
cool-looking louvres on the sides, which match
the speaker used with both the SX-24 and SX-28 series.
If you already have the speaker it will look really
great with this radio.
Comes with the schematic diagram.

Will sell for $185.00 plus shipping

3307. FS: RME-45 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-25 00:00:00 UTC
From: Radios_R_Me@yahoo.com
Message-ID: <38b68225.8080310@news.earthlink.net>
Source record: 70637
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.boatanchors

For sale:

RME-45 receiver - Covers 540 kHz to 33 MHz.
Comes with the complete SAMS Photofact including
schematic and all service
information. Open design makes this receiver
easy to work on. Case needs painting, as there
are some scratches consistent with the age of
this radio (1947) under normal use. Not terribly
bad though. This receiver uses loctal tubes and
has a two speed dial with concentric knobs.
Front panel looks excellent, but rig needs some
minor repair. All parts and the original knobs are
present. Will sell for $200.00 plus shipping

According to your description it must be the R-366/TRR receiver. It was from the late 40's-early 50's, Navy contract for the US Marine Corps as a "moral receiver and auxiliary HF communications receiver". It has a good push-pull audio output stage (2 6AQ5 tubes P-P)and originally came with a 12" speaker with a humongous magnet. The bandswitch assembly is a turret. The bands are not one MHz each but 6 bands covering 500KHz to 30 MHz. It has a BFO but no SSB positions on the function switch (properly tuned, it receives SSB). I have one, (with the original speaker) and it's a great sounding SWL receiver but it's not a bad communications receiver, either...

There's always a chance that some of the regulars are bi-lingual
but I agree that, at best, there's a slim chance for an answer.

Gents,
I have a chance to buy a Hammarlund SP-600 locally. I know virtually nothing abt these other than that there were many many different versions made. What ones are the better ones?

Why are they better?

This one does NOT have a cabinet, it is a 19 inch rack mount version. As of this writing I have not seen it. I plan on looking at it tomorrow (sat) and then making a decision on the purchase. I do not know the suffix. The owner told me it is operational and overall pretty nice. I plan on using it to rcv mostly AM for my upcoming vintage am station. Is this a good choice? I want to be able to rcv wide, at least 6 kc, will this do that?

any opinions abt the SP-600 are appreciated. I have been looking at the HQ-170-A and the National NC-303 but this guy is local so it would make things a lot easier.

Besucher sind am amerikansisches NG mit "American Laws"

rec.radio.amateur.... are international newsgroups, they may be 99.89%
dominated by North Americans, but still they are international NG's.
It seems important to understand that practices that applies to
America are just too often not much use elsewhere.

You may not be aware of the distance between America and other
continents. I is only 500km to Hamburg, but 10 times as much to
America. Trade between the continents isn't just as easy as within
Europe or Germany, parcels are very often badly damaged between USA
and Europe, other difficulties are caused by customs and VAT.

What no one is commenting on, is that the tuning gets REAL cramped and
critical as you go higher in frequency - on 10 meters, the WHOLE band
is about the width of your little finger - it WILL teach you patience
in fine tuning and guessing what frequency you are on - IF your eyes
don't give out first! Oterwise, in good condition, thay are a decently
sensitive and stable receiver - but *I* wouldn't trade a good NC-303
for a CARLOAD of SP-600's!

Yes, I've had BOTH!

Well, I would REALLY like to avoid E-bay, so let's give this a try!

I have a good condition SX-96 general coverage w/amateur bandspread reciever covering broadcast band to 30 mhz. It's fully operational, has NOT been "restored" in any way, so a real Hallicrafters fan would enjoy the small amount of polishing or paint that would easily make it look like new! No dents or dings, all the original knobs, all pilot lights work, the meter is excellent, the paint and silk-screening are all basically excellent, and I have a copy of the manual. I can provide JPG's to those seriously interested, but they are from a video camera, so not highly detailed - sorry.

I have applied the usual tuner-tonic to switches and controls, as well as the tuning capacitors, and it works GREAT! Calibration is quite good, tuning is smooth - works well even on 10 meters, both SSB and AM! All-in-all, a good reciever for use, or a nostalgia piece. No mods have been done I am aware of, tho' the volume control HAS been replaced with one that includes an off/on switch - who knows, the switch MAY come in handy some day! Only detraction is a small decorative aluminum insert is missing from one of the knobs.

I am asking $150, delivered/US, OR will trade. I am interested in a Globe Scout 65A or B, as well as a Globe VFO deluxe. Also interested in a CLEAN, operational Heath DX-100-B or Johnson Valiant. Of course, price differences will be negotiable in regards to trades - and MY SX-96 is NOT junk, nor am I interested in junk or "project" units - if it isn't clean and original, I'm not interested!

The deal I had with the potential buyer fell through so here it is again:
FS: ITT MacKay 6100 synthesized HF programable tranceiver, 100 watts out,
solid-state, 2-9 MHZ, SSB & AM, Microprocessor programmable, with mike and
complete service/operating manual. $125, U-pay-shipping. Mike, (409)
693-1461.

Hi Gary

I have a JX17 SP600 and if you are looking to receive AM, you can't find a better radio.

Jim

it is possibly caused by a stage which needs time to mute, but
difficult to say when one doesnt know which rig you use

As the output power is higher during the hum, it is possible that the
power supply filtering is not being enough for this big power. As it
diminishes filter becomes good.
I'd suggest you to investigate the RF power circuits to see why this
power increase occurs. You haven't told whether it is a tube or
transistor rig but to measure the bias circuit to see whether it shows
any change during the problem is a good idea , I think.

There are several, but not open to the general public. SUggest you go to the Timonium Hamfest and make friends with the U.S. Surplus guys. They have a huge warehouse near the B&O Museum filled 3 floors full of junk. As far as prices go, they are a combination of extremely reasonable and what I would call "retail". He sells to many equipment dealers and knows the value of late model radio equipment. OTOH, I bought a beautiful Lambda 500V regulated supply for $15 - and all it needed was a new fuseholder.

The owner is a hell of a nice guy and usually will allow browsing on Saturdays (his wife goes out and buys everyone lunch, too!).

There are other dealers also but you have to get the secret handshake to actually go to their places. They don't want to deal too much with retail sales as they have all they can do to support their primary market.

>
> Yes, I've had BOTH!
>

But that's not unique to the Super Pro. Any general coverage receiver
of that time period that didn't have a large number of fixed bands
would have the same problem. They all covered basically a 2:1 tuning
range, so the top band would cover about fifteen MHz or so.

Of course, the SP-600 had a still higher band, the 30 to 54 MHz
range. That is a plus in it's favor, if you want a general coverage
receiver. Many a times I'd fidn the frequency of an oscillator
I was building by putting the Super Pro on that top band, and giving
the dial a spin. Since the spectrum was virtually empty, I could
easily find harmonics of the signal.

And I recall tuning SSB on six meters with the SP-600 I had for many
years. I'm not so sure the narrow portion of the dial was a problem,
not back then, and one could do things with the logging scale if
one took the time, but the low number of turns of the dial to tune
the ham bands was a problem.

Of course, the wide coverage and great flywheel know was an advantage.
You could tune from one end of the band to the the other with a twist
or two of the dial. I was always under the impression that the SP-600
was often seen in tandem with something like the R388 or R390, for the
simple reason that while the Collins receivers had a good dial and
easy tuning, it was a real drag to scan the bands.

When it comes to the dial, one really should compare it to other
general coverage receivers. A ham band receiver like the NC303
is far better for the ham gands than a general coverage receiver (Collins
and more recent receivers excepted), for the simple reason that a ham band

receiver only has to cover small segments of the shortwave spectrum..

Of course, the limited coverage of a ham band only receiver can be a problem if you want to tune in between the ham bands.

Hello!

I'm on the lookout for a working receiver to keep my Ranger I company for AM and CW operation. Will go to EBay if necessary to locate a radio, but this forum seems so much more civil so I thought I'd ask here first..

Requirements:

1) MUST cover 160 meters
2) Condition (electrical/mechanical/appearance) 7/10 or better.

Would be nice.....
1) External speaker, matching or otherwise.
2) Original knobs
3) Manual

Are there any HQ-170's/180's, SP-600's out there? How about Hallicrafters SX-99's, SX-101's, etc? Send me a description and asking price. JPEG's would be welcome.

Thanks for reading.

73, de Mike, K9UW

Why not try 2 resistors or one with a sliding tap instead? They would
put you in operation. Of course, if you need these exactly for
cosmetics, that's a different story.
Good Luck

Hello Group,
I am working on a Navy radio, and need some info. The radio is a model 6000 BAC. The radio uses either 6 volts or 120 AC. It's in a metal box, with a front that opens. Has a Shortwave and BC band.
The radio seems to be for rough portable use. Metal lovers over the speaker. While it works, I would like to clean it up and align it.....
What is the history with this thing?

3399. Parts Needed - R-808 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-27 00:00:00 UTC
From: Wayne Mackin <wmackin@home.com>
Message-ID: <9u5jbsoa1bm9eohr0m9tqkq6hr6suae92r@4ax.com>
Source record: 70589

I picked up one of these receivers at a hamfest yesterday, and need a few parts to get it going:

- The final audio interstage transformer (T1522) is missing from the set (the original must have failed, and the set has been rewired for headphones use only by the previous owner). This transformer is designated T1522, and the manual indicates that its specs are: 25K primary, 1.2K CT secondary. Any suggestions where I might find a replacement (exact or workable alternative OK)

- The entire FSK assembly is missing from the radio - anyone out there with one they would like to part with?

- where might I find the required connectors for the front panel sockets?

Any assistance would be greatly appreciated!

Regards,

Wayne

As it didn't work, the narrow frequency coverage was not a problem!
Weil es funcioniertet nicht, hatte ich keine problem ueber der kleiner
Frequenz-bereich gehabt.

(It's not so easy to remember these structures. I may yet set a record for
mistakes; you have the advantage, as your own languge is at least similar to
German. Mine is not.)

MARS is an acronym that means Military Affiliate Radio System. This is an
organization set up, trained and run bythe US military but composed of
Amateur Radio operators who place their stations and themselves at the
disposal of the military servicee their branch of MARS supports. Freiwillige
Funkern mit eigene Gerate. This was sometimes a problem, because these
operations are not conducted in the Amateur bands, and they are not
restricted to Amateur power levels. I am aware of one operator whom the DBP
fined some thousands of DM, and they threatend to take away his (illegal
power level) equipment, too. His crime was, he'd been operating on a military
frequency, as part of a military net, with a station licensed only for the
Amateur Service.

Alles was nicht pflichtig ist, ist verboten.

Cheers,

Cortland

Heinz

I once tried to subscribe to German Newsgroups, but only very few dared to reply in any language, I do not write very good German, but read several books, and do some conversation, but sometimes I get the comment from busy persons shop "Ich k&#65533;nnen Ihnen leider nicht gut verstehen", so I started using Norwegian and it works!

Wonder if you know any source for documentation for Wehrmacht equipment? Some Danish friends told me it was another source seen at the Hannover Rally, but it is some limits to travel so frequently to Germany, often go to Weinheim via DK2UO in K&#65533;ln. So it was practical to visit DL6VW Werner Gierlach, but he doesn't seem to be in work any more. Perhaps you have another suggestion?

Hi all

Has anyone ever come across a Kahn Research Laboratories SSB Receiver Adapter type RSSB-62-1B ?

If you have I'd appreciate some details and a photo if possible. If you use one; are they any good?

Many thanks

Simon (reply to simon@nomis.co.uk)

Brown Bros. (Machine Co.) BLT-A Key Parts needed.

I am trying to repair a Brown Bros. BTL-A Iambic key.
The part I require is the Spring-steel leaf spring which
fastens the paddle arm to the fulcrum. This is a small
piece of spring steel or stainless shim-stock approx .005" thick.

Does anyone have a parts unit or parts thereof, who can help me out?

**** IMPORTANT NOTICE: This software will be updated to reflect the
**** changes in FCC licencing structure (the five exams down to three)
**** by March 15th, 2000 (and possibly sooner). If you register the
**** software now (or at any time), you are welcome to free unlimited
**** lifetime upgrades, so you certainly will be able to upgrade when
**** the new version becomes available.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

Hello!

I am going to write in English, as in Spanish I would sure have some troubles <grin> ;-)

Well, so I am NOT the only Lorenz 6P203 owner in the World!!! Hooray!!!

I have one (you can see a picture in my WEB page; look at the 'Collection' link) and am also lacking schematics... So anything you could find would be also useful for me. Please, let me know.

BTW, my 6P203 works; I have not yet measured its performance in detail, but it seems to be a solid receiver. Mine is in a nice cabinet, with very useful lateral lids (as it weights a ton!).

Best regards,

JOSE

Hi Gary,

I agree with you that this discussion has reached a very childish and ridiculous point and I appologize for contributing to this (although others contributed as well).

I agree with you that posting in english clearly increases the chances to get an answer to a posting (I never disagreed -- see my former posting

In my opinon there is some disagreement on the basic character of a newsgroup in general. I conclude from your former postings that you understand a newsgroup as something similar to a roundtable on the band. If you understand it like this, than you are right if you consider a foreign language posting as unpolite.

I understand the newsgroup as something similar to a whole ham band, this should mean I can move around in the group/on the band, see the titles/listen for the callsigns and DECIDE if I want to answer or not. Here in europe you hear russian, italian, spanish, french and lot of other languages everyday (apart from english) on the higher bands. Although english is clearly the dominating language, I never heard someone replying to a (for example french) CQ with the words "speak english if you want to talk to us". If you understand a newsgroup in the sense I just described, I think you will accept german language postings to the same amount as you accept german speaking stations on the band (I hope you do).

These days, there is largest computer fair in the world taking place in my home town, with more then a hundred different countries. Almost 200 different countries and organizations signed for the EXPO 2000 world exhibition in summer this year. I never observed a reaction similar to what I observed in this newsgroup when somebody is asking which train to take etc. in english (no, I'm not in the tourist office and don't earn any money due to the expo). I guarantee that YOU, if you plan to come to the expo, will not be treated in a manner similar to the behaviour of some of the repliers to the initial posting. I guarantee that anyone here in HANNOVER will try to help where he/she can and will not insult anyone for not speaking german.

I appologize for choosing an unpolite way to make clear that the statement about the gun owners is not my opinion, but on my screen it was not clear, if this is my statement or yours. I concluded from this that there might be other people reading this newsgroup who might get the impression that this is my opinion what is certainly not true. It is up to people of the US to decide how they define "freedom" but I have the impression that there a lot of people in the US sharing my opinion. I don't know if more

laws will help or not. Just from simple statistical arguments it should be obvious that increasing the number of guns in a given area will increase the number of people killed by guns. This does not mean that every gun owner is planning to kill people. I don't think that gun owners are criminals. I just say that if I were a criminal, got into your house, found a gun there, my chances kill people are much higher than they would be if I didn't find a gun in your house.
By the way, it is YOUR country, it is YOUR government and is YOUR own risk. If you don't like your politicians, why don't you become politician and change the things you don't like.

Since this newsgroup is on antennas, not on policy, guns or how to treat foreign language posting, I will stop discussing these things right here, although I would like to know how you understand the decision of a jury in NYC, that these policemen were unguilty after they killed an unarmed man (hope this word exists) with (was it this number) 41 shots.

To the other readers of my last posting I promise not use this newsgroup as a forum for "non-antenna" topics anymore. I'm open to discussion, but let's find another newsgroup or use e-mail. In this sense I hope that you can sign this "gentleman agreement" and don't attack me here but use my e-mail adress.

The show is over

Vy 73, see you on the band

Ralf

Source record: 70485

Hallo Jan-Martin,

ich habe leider kein Schaltbild fi¿½r den Empfi¿½nger. Ich hatte damals fi¿½r Jose den Empfi¿½nger in Deutschland von einem OM abgeholt und an Jose verschickt. Der Lorenz Empfi¿½nger machte einen sehr guten Eindruck.
Im Mi¿½rz beginnt die Flohmarktsaison hier in DL. Es hibt einen Hi¿½ndler, der recht viel Dokumentation im Angebot hat. Ich werde die Augen offen halten. Eine Alternative wi¿½re noch eine Anzeige im Web unter http://www.hamradio.de/.
Der Eintrag ist kostenlos.

Unfortunately I don't have a schematic. I picked up the receiver for Jose two years ago from a ham in Germany and shipped it to Spain. The receiver was quite impressive.
The swapmeet season in Germany starts in March. There is a dealer who has a large collection of manuals for sale. I will lock for the manual. You may also post an ad on the Internet.
http://www.hamradio.de/
The posting is free of charge.

I'm not real clear on this Chris - exactly WHAT is it you have for sale,
and how much do you want for it?

Perhaps a few MORE posts on the subject?

>Ralf
>
>DL 6 OAP

VERY well put - and accepted Ralf!

In fact the ONLY statement I *will* contest, is the one relative to guns and statistics. Those statistics in places like:

New York - LOTS of gun laws/restrictions - ALSO lots of gun related crime!
Switzerland - guns in nearly every home - LOW gun related crime!

Similar statistics showing the SAME results can be produced for MANY other areas - the basic key being that the MORALS of a society determine the "threats" created by items like clubs, knives and chainsaws, NOT those items by themselves. THUS, it should ALSO be clear that demonizing the ITEM, and not the underlying causes is FUTILE!

Outlaw guns, and violent people merely turn to some other available "weapon" - you can't POSSIBLY ban them ALL!

As a teenager living in rural America, various firearms were common in homes and pickup trucks - we saw EXTREMELY FEW gun related violent crimes. So what has changed in recent years? Have *guns* themselves become more violent? Similarly, "road-rage", or violence on roadways has increased many-fold - have our CARS or ROADS themselves become more "violent"? Of course not - it is the morality of our SOCIETY that has changed - and disarmament, or banning of guns OR cars will NOT correct our basic problem!

CORRECT our morality problem, and the WEAPON issue will disappear as it was in past years - but of course, far too many here and abroad prefer to use the force of legislation and "quick-fix" laws rather than the more likely long term fix of returning our social morality and family values to those of yesteryear...

I offer no apology for expressing these views in these groups - the basic principles involved span FAR beyond those relatively trivial issues or subjects usually found here - and should be expressed and demonstrated far more often by those with strong feelings on this subject! *I* am an American first and foremost - I am PROUD of the basic issues and principles our nation was founded upon - and make NO apology for my efforts to re-establish and underscore those basic principles! Ham radio is great - but it doesn't begin to compare in importance!

Regards...

Gary - KJ6Q

Rather than addressing the morality problems, police states have
historically simply disarmed their citizens and tried to monitor
their every action. It has been so for thousands of years and it
is still so. Technology has recently made it easier for governments
to disarm and monitor their citizens every action.

>Cortland

Cortland,
this is fb, obviously it was an improved response when writing the
title in German. Think our capabilities writing in German is almost
equal, so only my teacher would have preferred the other language. The
message was not xposted, perhaps this would have improved the
response, but since I am principally against it, I refrain from this

it will be interesting to learn what sort of use this receiver was
meant for, it is rather limited frequency range compared to normal
shortwave receivers, but is it a particular German practice? Some
ex-German receivers made 20 years earlier have also a frequency limit

HELP!! Police Motorcycle Radio's Wanted
I desperately need a Motorola FMTR-40V(D)1 tube two way portable radio unit. This was part of the "research line" from the late forties to mid fifties. This particular unit was used on police motorcycles during that period. I need this for a 1952 Harley Davidson Police bike that I'm restoring. These units were typically removed from the bikes before the bike was sold at auction. I am interested in ANY pre 1970 police motorcycle radio since I can use it as trading fodder for things I need for this bike. I hope somebody can help me.

The 201 is a triode with a 5 volt filament rated at 250ma. It is a detector or amplifier using 90 to 135 VDC. -grid voltage is about 4-9 volts and plate current is in the 2.5-3 ma range. It has an amplification factor of about 8. I'll bet this is what you were looking for. 01As, 201s and 301s are all about the same, I think. My source was an old Sylvania tube manual. Jack k8xx

If you get one, I would appreciate a copy of the scanned copy.
I still use a Wireless Set Number 19 from time to time. There is
a very active 19 set group here in North America. If anyone
hears CQ 19 SN, it's a member of the group calling CQ from
his 19 set. The group is trying to work 2,000 contacts this year
using vintage Military gear.

I have an interesting military transmitter for sale on ebay. It is VERY large and made by ITT Federal for the Navy around 1955. Basically it covers 300KHZ thru 26MHz. It is fully synthesized (!) in 10 cycle steps...yes 10 cycles and operates AM (full plate modulation), CW and FSK. The output is 100W using a 4-400A. You can go directly to the auction by clicking on this link:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=271586529
My email and web address is below.

thanks es 73,

Mike

3473. Drake newbie Needs Help!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-02-29 00:00:00 UTC
From: TC Dufresne <tdufres@radiks.net>
Message-ID: <552v4.495$ao4.3318@newsfeed.slurp.net>
Source record: 70314

Well, I wish I had gud news to report, but I do not. (sigh)
Let me share with you my frustrations tonite. I can't transmit!!

System:
Drake TX4
Drake R4A
AC-3 power supply
First I adjusted the power supply bias. Essentially that means adjusting a pot on the power supply so that the plate amps meter reads .07 amps, at "tune". Done, no probs.
Then, to tune up, you put the rig in "tune" mode, advance "gain" knob to 1 division, and adjust the "RF tune" control until plate current is about .15 amps on the meter, then quickly tune the "plate" control for a peak current dip.. PROBLEM!!!! The meter doesn't move at all when I go to increase the power to .15 amps as specified, no matter how I turn the RF tune control. If I move the "plate" control, nothing happens.....Hmmmm?
Then, you are instructed to alternately adjust the "load" and "plate" controls for maximum output. I'm still stuck at step two!!! Argh!
Is my power supply cooked?
Problem two:
when I try to adjust for CW, keying the transmitter gives a "click" (like a "dit") then it goes off. I try to adjust the "vox gain", but that doesn't help.I have it practically all the way on! (fully clockwise) If I really crank the "Gain" up,(like 3/4's of the way) it will stay on for about 1 second, then it goes off, then I can hear almost like an "echo" occur, like it goes on again and I don't even press the key. I notice if I mess with "vox delay", that affects the on-off, but still, it doesn't seem to stay on appropriately, or shut off appropriately. If I key quick like I'm doing "dits", I hear the echo again. I'm quite sure that this problem is directly related to the power output thing described above.
Yes, I have read instructions. I could fax/e-mail them to ya if you think that would help. Right now, I'm snatching at anything. Receiver works fine. I can control VFO from receiver or transmitter.
I noticed NO OUTPUT thru MFJ tuner. I put on my RS SWR meter. Needle barely budged!!!!!
When I go to "spot" to compare transmit/receive, like zero beating, I can barely hear the beat note, again, unless I crank the "gain" way up.
Pse respond here or direct

Unfortunately, quite true - and *I* have little doubt we will see MUCH
more of it in our country - regardless of WHO is in office as
President...

Biggest difference between our society and those of many foreign lands,
is that we aren't yet quite as domesticated and docile...

But, we're fast learners...

posted now the first issue of Drake 1-A circuit diagram, too (applies for serial number lower than 453), hope it is readable

have made some sketches to compare the differences between different model 1-A which seems to have been overlooked on the available sites, will make a complete list later

Early 1-A has 6BF6 AVC stage, it was changed to 6BJ8, but again 6BF6 in 2-A and 2-B, audio amplifier in 2-A is 6AV6, not 8BN8 as for 2-B

plan to make my own site with certain information about R L Drake equipment because I feel this is not understood at the sites seen

My idea is that almost any receiver may sound as good as a Drake 2-B, provided the AVC time constant (two components!) is copied, this seems to apply for:
Collins 51-S, 51-J*, Trio/Kenwood TS-500, TR-7010, FT-200/250**
also tested this practice in transmitter ALC (FL-dx-400/500)

Yaesu FTDx560 HF Tube Transceiver 10-80 meters,
plastic still on faceplate, excellent condition-
with copy of manual $250.00 (Pending Sale)

RT-524 30-76 Mhz Military FM transceiver, Good condition an 8 on a 1-10 scale,
No nomenclature tag (desirable for collectors) Replaced with Serial Tag.
Manuals and original mic. $500.00 See Fair Radio Catalog for more info. Their
Price $625.00-$675.00

Swan 1200W 10-80 Meter Amplifier, Very Clean Condition, Uses 4 6LQ6 Tubes
With Manual. $250.00 Obo Pic will be on the WebSite Soon! Will trade for a
Kenwood TS520.

Yaesu XF-32A SSB filter for FT101 series, $40.00

Tram D201 Parts, Wood End Caps, Meters, Crystal/selecter Board, Transformers,
Face Plate, Knobs, crystal filter, Etc... Inquire with your needs,.

Misc. 24V Switching power Supplies, Cosel, Power One Etc... Most new in the box

Crown IC-150 Stereo preamplifier, Metal cabinet
model with copy of manual $150.00 Obo

Midland 79-290, removeable face 10/11 meter AM/SSB/WX
Mobile,dual final design, 5 bands, WX, good condition with
stock mic. $110.00 Reduced!

Commercial VHF Handhelds:
Motorola Radius P50 (Weak Battery)
Kenwood TK240 with drop in charger, great battery, great condition.
Reasonable offer

Homebrew 3 tube 10 meter amplifier, uses 3 military
versions of the 6146, Seperate open chassis PA and
power supply deck. RF sensing, Plate Load, meter, SSB
and AM. 150-200 watts with low drive $130.00 Reduced to $100.00

Misc. Vacuum tubes (No Sweeps right now) See WebSite

Kenwood TS430, with AM filter and FM board, Manuals, Clean and working Great
$400.00 (Pending Sale)

Browning Mark III receiver, excellent condition $140.00

Browning Mark III Transmitters, Make one good one from the two units $110.00

The above Brownings can be seen on the website

Icom IC-230 with manual, mic and mobile bracket. not working correctly, VCO unlocks but in great cosmetic condition,, $30.00

Browning Mark III Receiver, Browning Mark III AM Transmitter, Very Clean! and D104 Mic $250.00 Pic will be on the Website Soon !

Tram D201s, Both have unlocked VFO's, One has lower freqs
with good AM and weak SSB the other has upper freqs with good
AM and SSB. Both in good condition $250.00 Each

Penetrator HB-150 10/15/20/40 meter Mobile amplifier, 150 watts class AB1 Low drive input required $150.00

Yamaha FG-460S-12S, 12 String Guitar, Beautiful guitar, near flawless, Gold hardware, Pearl inlay, Seymore Duncan Acoustic Pick-up, Hard Case $350.00

Hooker 10 meter Amplifier, 1 pill design, PEP and RMS mode, CW/AM/SSB, Preamplifer, Clean, still has factory seals $75.00

Pacifc Scientific / Superior Electric 2 Axis Servo System $250.00

Tram Diamond 60 AM/SSB Mobile, SIltronics Model 90 VFO -3 and Paradynamics Meter, All in good working condition $175.00

VHF Trielectric Amplifier 13.8 VDC As Is $40.00

Motorola UHF 13.8 VDC 450-470 Mhz Solid State Amplifier, Surplus, As Is $40.00

Alan K1313 10 meter Single Tube Modulator With Spare 6KG6 tube, New Russian tube installed, Spare is 90% or better, Clean and works Great! $150.00

Johnson Messenger 250 Base, With Original Box and Manual $75.00

Astatic 10DA Mic Head, Works and looks good, Missing the locking Ring but plugs right into a D104 Stand $30.00

Fentone 500C Studio dual crystal Mic Head On a TUG8 D104 Stand, Wired to a Demco Tube Modulator. Smooth Clear Audio! $200.00 Obo

Pentax K1000 35mm Camera, Wide and normal lens, 2x teleconverter. Cokin filter holder with flare guard. Several special effect Cokin Filters, polorizers and acessories, carrying case etc... $250.00 Obo

SBE Trinidad , 23 channel base CB, near perfect condition, original manual $70.00

Fluke 8050A Digital Desktop Multimeter, AC/Batt, needs new batt. but works great on AC $50.00

NF Circuit Design Block Model CR-116 Low Distortion Signal Generator, $125.00 Obo

Misc, Yaesu FT101 Components and parts, Misc untested boards Email If you need something.

Electrovoice Mic.... See Website!

Misc 19" Racks..... Email for Details

Will Trade For Mustang 5.0 Parts Or Kenwood TS520

Would be grateful for any info on British MK 123 "spy sets". I understand that they were used mainly by the Foreign Office as a back-up tx/rx and also by SIS (AKA MI6) and Special Forces (SAS?). An example was on display at the Science Museum in London.

Also info on availability and recent prices for a working set with all ancillary items, manual and external 12V inverter power supply.

>I need tube data on 201A ..in particular, need filament voltage and current .
>Harold W4PQW

Hello, Harold, the 201 "A" has a 5.0 volt tungsten filiment, current 250 mA.

As opposed to a 201, which has a 1.0 amp filiment current at 5.0 volts.

201 "AA", "B", are 125 mA oxide-coated filiment, and 201 "C" is a 62.5 mA filiment.

Hi guys - I still have a few more of these left:

Exciting novelty item: HAND-CRANKED MAGNETO
GENERATOR! Produces 120V AC.

These will provide about 20-30 Watts depending on
your cranking speed! The size is about 3" diameter
and 3" deep with a retracting handle. You can mount
these behind a sturdy front panel with a single hole
and the large nut provided.

No, they are NOT 400 Hz (grin!)

I have some still available! Will sell for $25.00 each plus
$5.00 shipping

E-mail me

I need an audio driver transformer (T3) for my Ranger. It's the transformer that is mounted on the bottom side of the chassis and drives the 1614's. Any advice regarding suitable replacements?

Also still looking for the 3 long carriage bolts that hold the cover to the front panel.

Thanks & 73,
Steve, NX9Z

Hello,

I am looking for two books about German communication equipment. I am especially interested in the Wehrmacht equipment. These books are issued by Paladin Press, but they seem to be out of print and can not be found. Can anyone help me.

Communications Equipment of the German Army : 1933-1945
By: Charles J. Barger

Radio Equipment of the 3rd Reich, 1933-1945
By: Charles J. Barger

Please e-mail me if you can help.
Thank you very much.

Best regards,

Source record: 70443

To bid on the item, go to:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=269222095

Here's just the thing to round out your Knight-Kit collection,
or to help you advance from Tech-Plus to Extra! This Knight-Kit
Code Practice Oscillator is from the late '50s/early '60s. It
has a "revolutionary" CK-722 transistor powering it. I tested
it out before putting it up for auction and it works fine. Uses
a 1 1/2 volt AA battery for power. The bakelite box is in good
shape for its age. There are no cracks or deep scratches on the
bakelite box. The front is also in good shape, as you can see.
I guarantee this will not be DOA.

Steve,
I have three long carriage bolts from a partial kit I picked up at a swap.
The galvanizing is getting a little rough, but they should clean up nicely.
Send me an e-mail with your address and I'll get them in the mail to you.
Good luck with your restoration, Rangers are great rigs!

I am looking for information on the Northern Radio Co. model N542 HF amp. Runs a pair of 3-500Zs. This is a commercial service amp designed for maritime (shipboard) use. Has six channels which can be tuned from 2-30mhz. Runs on 120 vac input only but uses a dc choke filtered power supply that provides 4200 volts to the tubes. Built like a tank but I have no information on it at all and it needs some work to get it going. I am looking for a technical manual, schematic, or anyone who knows anything either abt this amp or even the company. An internet search turned up nothing. Looks like a mid-70s era design.

Tom

I think you probably have a set of "shot" finals--also possibly the 12BY7 driver, but most likely the finals. Spring for a new set of 6jb6a's or buy a set of 6gj5a's and snip off pin 8 on the bottom of the tube (these are cheaper and will work in the T4x's.) make sure you keep your mfj output meter connected and use it when you're tuning--its much mote convenient to have a eparate output meter than to have to use the one on the transmitter by puching in on the meter knob. If you are new to hte old style high voltage rigs, be vary careful adn or ask for more advice before doing any work where the power is not disabled.

There also is a resistor which may have been cooked--suggest you take a visual look under the chassis and measure the voltages with a Digital VOM and compare to the manual chart

This Pringle guy seems to show up on the "Bad Guy" list
repeatedly. I was hearing the bad word on him in 1996!

Perhaps a community effort like that which put away the
crook down in Florida would be effective.
Can you folks in Canada put out the word and get
several victims together so you can apporch his
local law authority? It worked great down here
and the theif is in jail for a looooong time.

Subject: WTB: Ranger parts/advice

If this transformer was gone in either of my Rangers, I would change the circuit to eliminate it. There have been several articles about doing this. People do it to improve the audio even when their transformers are just fine. The circuit I'd be tempted to use is the one from W1LHR or its variant from W3AM. They use the same tubes, you don't need to do any drilling and when you're done, your radio will sound better.

Jon, K6JEK

Message-id: <38BC1105.6C58@win.bright.net>

I need an audio driver transformer (T3) for my Ranger. It's the transformer that is mounted on the bottom side of the chassis and drives the 1614's. Any advice regarding suitable replacements?

Also still looking for the 3 long carriage bolts that hold the cover to the front panel.

Thanks & 73,
Steve, NX9Z

Here's a very nice, perfectly operating and un-modified 75 meter SSB single bander by Heathkit.

Includes HP-23 power supply and original manual, and all cabling. Front panel is perfect, outer cabnet appears to have been repainted quite well with the correct paint at some point in the distant past, and other than a SMALL added hole for access to the internal carrier null adjustment, is in perfect condition. I've had it for several years, used it a fair amount, both barefoot, and into an amplifier. It gets excellent reports, and the receiver works perfectly. Power output is between 125-150 watts on my meter. Sideband and carrier suppression are excellent and stable. There is no evidence of mobile use I can see.

Price is $150, delivered in continental USA. Reply via Email.

3558. FS: ORIGINAL Collins & Harris manuals

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-01 00:00:00 UTC
From: Mike Linger <gspubl@tca.net>
Message-ID: <sbrjj436ee6124@corp.supernews.com>
Source record: 70363

FS: I have several ORIGINAL service manuals that are very hard to find. They are as follows: Collins 231D Transmitter, 3000 Watt Output Radiotelephone, heavy manual with all diagrams, a thick manual, $95; Collins 75A-2 Instruction/service manual, $75; RF Harris RF-230/RF-230M Programmable HF-SSB tranceiver service manual, very thick, $95; All manuals are in very good condition and not torn up with nice original top covers. If interested call Mike at (409) 693-1461 or e-mail.

3559. Re: Drake newbie Needs Help!!

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <38BDD515.2ED0E8D6@your-net.com>
Source record: 70364

Tom
I would guess since this is an older Drake that it could need some repair or simply an alignment. The plate current should rise before you reach 10 o'clock with the RF Tune control. I would look for someone to check it out for you. You didn't get the Drakes from Ebay did you?

73, Gary

Very clean works great. No spkr
Copy of manual
Will send jpeg upon request
Front panel excellent.
Case Very nice.
Asking $350.00 plus shipping
Thanks, Charles

3561. TR7 help

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-01 00:00:00 UTC
From: John Black <jmblack@compuserve.com>
Message-ID: <38BDDE7A.21960B3B@compuserve.com>
Source record: 70366

My TR7 has gone odd on me. It works on most bands, but 20 meters shows 10mhz less on the digital scale (4mhz instead of 14mhz), and 15m does it, too (11mhz instead of 21mhz). It really does seem to be receiving on 4 and 11mhz, so I guess the display is right!
I don't have a service manual, so any help from some TR7 experts would be most appreciated.

Regards,
John Black

Hello,
I would like to have info regarding any dealings that my fellow amateurs may have had regarding Ted Seely, AA4GM as I had some bad dealings with him regarding a deal on Yahoo Auctions for a pair of Heathkit twins. I won them fair and square, but apparently once he found that I am JUST a No-Code Tech class amateur (he being Amateur Extra) decided to not answer my emails in reply to his emails to confirm the winning bid.
My query resides in the above dealings in that I wish to know if this Amateur is renowned for this type of dealing with other subordinate hams. I thought this was a fraternity of learning and mentoring of younger hams by Elmer's who would encourage, but I think that this man overlooks the elmering he once had and the gleam in a budding amateurs eyes at the glowing of vacuum tubes that reminded him of the day when he himself was 13 and an uncle gave him his Heathkit twins to remember him by and possibly become an amateur and subsequently passing this to his children or family members some fine day in his old age. Please if you have ANY such info please contact me that I may warn some of my young amateur friends to STAY AWAY from this man. I'll step down from my soap box now a bit more educated and CAUTIOUS of my fellow hams as I have been bitten.

Source record: 70372

Hi,

Yesterday I had the chance to inspect, and turn the handles on, the PA stage of the original Alexander Palace television transmitter that is with the BBC exhibition currently in Bradford. It was by Marconi and is labelled as a SWB-15. I think it was first fired-up on 45MHz around 1936 (closing down in 1960?) carrying the first public high definition television service in the UK and possibly the world.

Interestingly it was also used to help 'bend' the German 'crooked leg' Lorenz beam target-finding system in the early part of the war. I well remember the surplus 45mHz IF strips, with their red Sylvania EF50's, that were originally destined I believe, for the front-end of domestic TV receivers.

I wonder if anybody has any technical details of this transmitter so that I may tie-up what I saw with the specification? I did notice that the anode voltage and current meters went up to 12kV and 10A respectively but as it would have to be some kind of linear amp, this doesn't give much of an indication of peak output power.

One familiar setup in the same exhibition was a homebrew television set (we had one in the shack above the physics lab at school) made from the ubiquitous R1355/RF27? GEE receiver combo and a type 6B indicator (complete with its green-phosper VCR97 tube). I wonder whether that common indicator on the surplus market (APN-1?) with its 5CP1 tube was used for the same purpose on the western side of the pond?

Cheers - Joe, G3LLV

Hi Vlad- how much money are you looking to get for the RCA AR-88? What might you be looking for in trade? I have a Drake TR-3 in nice condition but has a 40 meter problem (no AC-4 supply). I also have some Clegg 2 meter AM equipment and a Collins 75-A1 parts radio. I'm not sure if any of this boatanchor stuff interests you. Let me know. Thanks, Jim

Joe!
What amazing information! Much of my early "ham" and electronic hobby
work was with the 201 during the late 1940's, using "pulls" or salvaged
tubes from sets stored out in the old "chicken coop". I never heard that
anything but quarter amp filaments existed, but your 201 with 1 amp
filaments easily explains short "A" battery life encountered periodically.

I can't keep this monster in my garage as I have no room (or need for it).

Tektronix Type 555 Dual beam Oscilloscope
S/N 00363
Type 21A and Type 22A Timebases.
Type K and Type 53/54K Vertical plugins.

No probes and is missing power cable from supply to scope. Comes with a cart. Would like to see it picked up in the Houston area as this monster would be costly to ship.

It is supposed to work but without the power cable I can't test it.

Would like to see it go to a boat anchor enthusiast but will part it out if the demand is there for the parts.

If interested contact me at n5tu@wt.net

Earl

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

I thought I would never sell this but we know how that goes.......Aydin Energy Systems plate xmfr. primary is 208/220/240 and the secondary is 4400vct/3300vct with +/- 10% taps at 2 amps CCS. Yes, that is 2 amps continuous. This thing is HEAVY at abt 150 pounds + so UPS shipping is not an option. This will have to be a pick up only in San Diego. I know that there are commercial carriers but I really do not want to ship this so please, pick up only in San Diego. Dahl is currently offering this same xmfr in his commercial catalog for $785.00.

The plan was to use this for four 3-500Zs in parallel but things have changed so now this is in excess to my needs. This would be a great xmfr for the big tetrodes with handles or for the 4-1000A(s). You can get a wide variety of voltages out of this depending on how you utilize the center tap and the +/- 10% taps. It is roughly 16" tall by 10" by 10" (eyeball measurement)

Price is $325.00.

I have a power supply out of my Northern Radio Company N542 KW HF amp. The amp runs a pair of 3-500Zs (not for sale). The power supply (which is for sale) is designed to be bolted into a 19" rack. It uses 120 vac input only. The output is about 4200 volts at 1/2 amp or so. The xmfr output is abt 3900 volts which goes into a dc filter choke which looks like it is rated at around a half amp. There are four oil filled caps which are 4uF 2500vdc units, probably series-paralleled. The unit is energized by applying 24vdc or 12vdc to the primary power relay. I do not know for sure if it is a 12 or 24 volt coil since it energizes on 12 volts just fine. The output is a Millen HV connector (just one for the B+, B- must be chassis ground). The topside chassis is full of thick dust/light grime. Not bad. With a high pressure air hose most of it would clean off. The underside looks perfect. It also uses two 25k ohm 225 watt bleeder resistors. I have no scat for this but it is a very very simple design that could easily be traced out by hand and drawn out from reverse. It DOES work. I tested it on my big amp that runs a pair of 3-500Zs and with 1350 watts out of the amp the power supply dropped to abt 3000 volts. Not super good regulation but considering 120 vac line not really bad either.

Also has a fused line cord with a fuse on each side. There is a 8 pin octal socket on the rear of the chassis for relay power and I think there might be 120 volts to one of the pins. I removed the two leads that go to the pri power relay so I could verify operation. Otherwise it is totally stock. This power supply is 100% complete and ready to use. No metering at all. The front panel is totally blank except for the two fuses. The front panel looks fair, about a 6 or 7 out of 10. It would not be hard to remove the panel and repaint it. If you need a good 4000 volt supply at 1/2 amp to do amplifier work then maybe this is a good candidate. It is kind of handy having it wired for 120 vac since it is "portable" at abt 75 pounds.

Price is $215 shipped lower 48. Will double box and insure via UPS ground.

3626. Free: rotary switch parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-03 00:00:00 UTC
From: k7itm@aol.com.nospam
Message-ID: <20000303015555.02519.00000171@ng-cc1.aol.com>
Source record: 70274

Shack cleaning: I recently acquired about 15 pounds of rotary switch parts. These are for the serious do-it-yourselfer: they are the raw parts you can use to build wafers. They include the phenolic (and a few fiberglass and (?) polycarbonate) disks, both internal (the ones that rotate on a double-flatted 1/4" shaft) and external (the fixed ones), various fixed contacts to be anchored with eyelets to the external disks, and various silver-plated rotary "rings" that anchor with tabs to the inner disks. You'd have to supply the indexing mechanism, shaft, machine screws and spacers to hold the wafers, and the eyelets. (I do have some eyelets but plan to use them in circuit boards. You could talk me out of them if you bought me some eyelets for boards.) Free...but you pick them up (near Everett, WA) or pay me shipping plus $10 for packing and getting to the post office.

Cheers,
Tom

3627. tuning up a tetrode amp

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-03 00:00:00 UTC
From: Lane Ku7i <Ku7i@worldnet.att.net>
Message-ID: <3FKv4.335$B37.19921@bgtnsc06-news.ops.worldnet.att.net>
Source record: 70275

I am almost embarassed to ask this. However, since my ego is inversely proportional to my waistline.....I have recently acquired a superb HB amp covering 160 to 10. Uses Dahl components in the PS, vac. variables in RF deck. built professionally by a EE (now SK, RIP). The tube is a single 4cx1500. My questions is how the heck do you tune this up? I have used triodes all of my life sans my TS-820/830 which use beam power pentodes in the final (2X 6146) but I just tune for max power on these. I have always avoided tetrodes mosly due to my ignorance of the tune up procedure.

The amp has metering for screen I and E and also grid I and E as well as plate I and E. What is the value I need to watch? I assume that it is not safe to tune it like my 3-500zs which is usually just tuning for max power out with a string of dits at 60 wpm?

Also, what is the going rate for a good 4cx1500 pull? I figure they are not too bad since the military used/uses them and they have been around longer than I have been alive.

Hi all.

I'm actually looking for two(2) full Drake C-lines, but I'm willing to put them together a piece at a time.

In particular, I am looking for the R4-C, T4-XC, AC4, MS-4 plus station mic. All must be in as near-mint and fully operational condition as possible. Need manuals and interconnect cables, too.

The R4-C must have a full complement of xtal filters, NB. Late production version preferred.

Please email with price, condition, and any mods that have been performed to:

NeilR@innermedia.com

or you can phone me at (603) 465-2788.

Thanks in advance.

He he! You guys are funny. Yes, you can zap all kinds of things with
these...

Anybody like to try one?

Hi guys - I still have a few more of these left:

Exciting novelty item: HAND-CRANKED MAGNETO
GENERATOR! Produces 120V AC.

These will provide about 20-30 Watts depending on
your cranking speed! The size is about 3" diameter
and 3" deep with a retracting handle. You can mount
these behind a sturdy front panel with a single hole
and the large nut provided.

No, they are NOT 400 Hz (grin!)

I have some still available! Will sell for $25.00 each plus
$5.00 shipping

E-mail me

If you have had either good or bad experiences out here, please make
the appropriate GoodGuy
or FraudAlert postings on the newsgroup.

Use the word "FraudAlert" in the subject box.

GoodGuy if that is appropriate.

What happens is that all the messages here are posted on www.deja.com.

These postings will be there forever for others to read.

All you have to do is go to "www.deja.com" and do a search using a
number of ways
such as name, callsign, email address or whatever else works.

Anything that has ever been posted about that person on ANY newsgroup
will be there for all to see.

Your postings on the newsgroup will alert others as to whether they
should deal with the seller or not as all postings go the www.deja.com

[One or more binary attachments are retained only in the source text.]

Subject: \\..SAY A PRAYER FOR THE INNOCENT VICTIMS OF BLACK VIOLENCE AND
LAWLESSNESS!!!///

It's interesting to see how selective the black community can be when it comes
to what they get outraged about.
-

A couple of recent examples:
-
1) A four-year-old white boy was dragged 4 miles to his death by a black man when the automobile his mother was driving got car-jacked. The child was attached to a seatbelt, hanging out the side of the car, clearly visible to the perpetrator. The mother frantically pleaded for the life of her son to no avail. Some other motorists watching this horror unveil eventually subdued the driver. According to bystanders and police, the man was completely remorseless.
-
Tell me something... How is this man any less of an animal than the 3 rednecks that dragged a black man to his death behind a pickup truck last year? So, where is all the public outrage and cries of racism here?
-
2) Yesterday, a black man went on a firing rampage, shooting 5 white people - killing 2 and leaving 1 in critical condition with a bullet lodged in his brain. When asked why he did it, he told a neighbor and police that he just wanted to kill as many white people as he could. Again, completely remorseless.
-
Again, where is all the public outrage and cries of racism here?
-
Whenever incidents of this type occur, there is a defining silence coming from the black community. The double standard that seems to apply, suggests that it's OK for black criminals to victimize whites but not the other way around and has led to a well deserved lack of credibility for black's when it comes to criminal justice.
-
Americans (law-abiding blacks and whites alike) have finally decided not to allow this double standard and racial bias to infect the judicial system any further and this was at the rudiment of the judge's decision to move the Diallo trial out of The Bronx.
-
And since no discussion on this subject would be complete without a comment on the Diallo verdict;
-
For the record, I didn't agree with this verdict. At a minimum, I think these cops should have been charged with extreme reckless indifference to human life and they should have been punished.
-
This was not murder however... It was incompetence... If these cops set out to murder this guy, then would have done it quietly in a back alley or other such place and they would have quietly gotten away with it.
-
The real culprit here is the culture of young, black, African American males, which engender an atmosphere of fear and lawlessness wherever they congregate!
-
These neighborhoods to which the NYPD Street Crimes Unit are assigned, are some of the most dangerous in New York City. Kids pull handguns on cops all

the time and many policemen have been shot, killed and maimed.
-&
In this highly charged, hair-trigger environment, no cop is going to risk his
or her life if he or she believes someone is about to pull out a gun.
-
No degree of sensitivity training, weapons regulations, political pressure,
threats, or other feel-good expedients is going to change a thing until the
black community starts to take responsibility for their children and their
communities.
-
In a strange sort of way, one might consider the final outcome of this trial
payback for the O.J. verdict.
-
-
-
-

From: k7itm@aol.com.nospam (K7ITM)
Subject: Free: rotary switch parts

Shack cleaning: I recently acquired about 15 pounds of rotary switch parts.
These are for the serious do-it-yourselfer: they are the raw parts you can
use
to build wafers. They include the phenolic (and a few fiberglass and (?)
polycarbonate) disks, both internal (the ones that rotate on a double-flatted
1/4" shaft) and external (the fixed ones), various fixed contacts to be
anchored with eyelets to the external disks, and various silver-plated rotary
"rings" that anchor with tabs to the inner disks. You'd have to supply the

indexing mechanism, shaft, machine screws and spacers to hold the wafers, and the eyelets. (I do have some eyelets but plan to use them in circuit boards.

You could talk me out of them if you bought me some eyelets for boards.) Free...but you pick them up (near Everett, WA) or pay me shipping plus $10 for
packing and getting to the post office.

Cheers,
Tom

Basically, still tune for max out, but watch grid current carefully as to not exceed maximum ratings - I've used that method in every linear amp I've had, from 811's to my current 3-500's and 3cx1200a7 with no problems.

Take the EAC if it is in good shape, the have become one of the most desirable next to the collins. Maybe even more so. They work great with the Ranger. You will have to open a contact to receive as opposed to the normal close a contact to recieve. You will really like it on AM. There is probably nothing better (which is open to debate) but in good condition nothing comes close

Just my idea

>Gary - KJ6Q

and still for TETRODES, what is screen current? Sometimes it goes
below zero, dependent on the amount of secondary emission - this
varies also by valve type - again varies with resonnance and load

3652. Grid current in Linear Amplifier? - Acceptable limit of -

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-04 00:00:00 UTC
From: LA8AK@online.no
Message-ID: <38c05b7c.90091746@news.online.no>
Source record: 70202
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

wonder what is acceptable limit of grid current in a 2x 6146B
amplifier?
ALC voltage is often derived from varying grid current over bias
network resistors, usually around 10k resistance. 1mA grid current
will develop 10V voltage drop.

Coupled via a 0.002uF capacitor to a voltage doubling rectifier with
output loaded by 0.1uF (ALC circuit) will maximum give -0.2V
A feasable voltage, the ALC circuit may not have any real function at
all
I modified the FL-dx-500 and received very good reports for improving
readability, but it still seems that few mA grid current is within
acceptable limit of grid current for this sort of amplifier using 2x
6JS6A or 6146B

I saw some big Iron listed for sale and figured I would list some of the big stuff that I have laying around. It is located near Philly and is pick up only.

(2) for sale- 4000 VAC with a center tap- 2.1 amps continuous, 175lbs, see pic @ http://members.aol.com/jimmoci/trans.jpg Yes, thats a 3-500Z as a reference for size in the pic. These transformers are from 5KW HF Jammers used by the military. $250 each

(1) 5000VAC @ 3 amps CCS from FM Broadcast transmitter- 250lbs Sorry-No pic $450

(1) Pole Pig Transformer- 7200 VAC with a center tap - 150 lbs - Not sure on current rating. $125 See pic @ http://members.aol.com/jimmoci/polepig2.jpg

(1) 3200VAC @ 2 amps from broadcast transmitter - old and ugly but works good, Sorry- no pic. $125 Around 90-100 lbs.

Thanks for looking,
Jim

BTW- I have to go deliver some really big iron for a 50KW SW Broadcast transmitter- it's 5000LBS - Now thats some iron! I'll bet it stays dead cold at the legal limit.

Thanks to all who sent suggestions and encouragement. I found the problem. A 5volt regulator is connected to the top PC board by a slide-on connector. Apparently the connector had become corroded, and killed the output of that regulator. Cleaning the contacts and applying some Cramolin solved the problem. While I was in, I also cleaned all the other board connections. Working well now!

One more question. I performed the extended receive and transmit mods per Drake. Position 1 on the Aux sw should now be 1.0-1.5mhz, but it acts like it did before the mod. I've checked my connections, and the diodes I used, everything seems okay. Any ideas?

Thanx all!

Hi, need some help identifying an old radio tube or light bulb (?) I recently obtained.

It is about 7 inches high, has lightbulb like filiment, with third element protruding out the top.

Screw in base. Says "Rectigon S-289 116 D-W"

Can anyone help identify what this might be?
Looks like it is from early 1920s or 30s, just a guess.
Please responde to Mark

This is a real workhorse of an amp. Recent procurement of a homebrew 4CX1500 amp forces the sale of this gem.

Modifed with the following:

1. Change of tuning dials from 1:1 to 6:1 reduction with vernier drives.
2. Back to back meter protect diodes.
3. Power supply diodes, bypass capacitors and equilizing resistors have been replaced.
4. Placed diode accross main T/R relay to increase relay life.
5. Placed 200 ohm dropping resistor in series with relay to protect contacts.
6. New T/R relay.
7. VHF parasitic suppressors installed on both the tube anode side and the cathode side.
8. Installed HV fuse resistor to replace choke in HV line.
9. Grid fuse protection using Rich's (AG6K) resistors and capacitors.
10. Cooling fan rebuilt. This baby is QUIET and moves a LOT of air.

I have notes on all of these mods as well as the published info that AG6K includes with his kits. This amp works better than new. The ONLY reason I am selling this is because of the new HB amp I just picked up. I will also include a copy of how to add 160 meters using AG6K's method. Not difficult to do.

The plate voltage on this amp idles at about 3100 and fully loaded at 1300 watts out drops to about 2600 or so. You can wire the amp for 120 or 240 but I recommend 240. Cosmetics are really nice, about an 8 to 8.5 out of 10. There was a Drake low pass filter bolted to the top of the case and as a result there are four non-original holes in the top of the cabinet.

This amp covers 80 to 10 including WARC. About 100 watts of drive for 1250 to 1300 out on 80 to 17 and a little less on 15, 12, and 10 meters. There are not seperte band switch positions for 17 and 12. Use the 15 and 10 meter band switch postions for those two bands. Use your auto-tuner is driving it with a solid state rig (on 17 and 12).

Have original manual and copies of all of the mods. The amp works PERFECT. Tubes are Eimac and of course full output.

Price is $625 shipped lower 48.

3683. QUESTIONS: Johnson Desk KW - Bias & Screen Mods?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-04 00:00:00 UTC
From: radiomuseum@webtv.net
Message-ID: <20923-38C14D44-25@storefull-154.iap.bryant.webtv.net>
Source record: 70233

Hi all,
I'm in the final stage of a Johnson Desk KW restoration - (that is, getting it to work correctly!) SN is 100280, so it is about the middle of the production of the 402 (or so) desks. The bias resistor network and the screen regulator chassis differs from my schematic/manual, which is dated 1959. The bias network has eliminated R214 & R215 and has changed the value of R208 from 100 ohms to 3K ohms. There are also changes to the wiring of the pots for adjusting bias and screen current. It is obvious that these are amateur changes because of the splices in the harness that are covered with electrical tape. IS anyone aware of a published mod (Johnson or not) that involved the bias network?
ALSO, the screen regulator chassis sould have a closed-circuit jack to allow screen current measurements. My reg. chassis has a binding post and ground connectors, which would suggest that screen voltage would be measured rather than current. HAS anyone seen this as a mod or is this a Johnson upgrade that didn't make it into the manual?
THANKS in advance for any information. E-mail or post okay.
Henry Rogers - WA7YBS

Sounds like a mercury-vapor rectifier, which were commonly used in battery chargers at one time. Rectigon was a trade name, but a more common one was "Tungar bulb".

Source record: 70236

I have a mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. NOTE: Please REMOVE the "02" to leave "worley" to reply or call 334-347-5281 day/eve.

3704. price reduced SB-220

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-05 00:00:00 UTC
From: Lane Ku7i <Ku7i@worldnet.att.net>
Message-ID: <JHBw4.5541$Pq3.393470@bgtnsc05-news.ops.worldnet.att.net>
Source record: 70054
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

AG6K modified SB-220. Full output. Now reduced to $585 shipped lower 48.
Will take an HQ-170-A, HQ-180, or 51J-4 in partial trade.

Real performer of an amp. Recent procurement of a homebrew 4cx1500B amp
forces sale of this gem.

Modified with the following:

1. Change of tuning dials from 1:1 to 6:1 reduction drives.
2. Back to back meter protect diodes.
3. Power supply diodes, bypass caps and equilizing resistors replaced.
4. Placed diode accross NEW T/R relay to increase relay life.
5. Installed 200ohm dropping resistor in series with relay coil.
6. VHF parasitic suppressors installed.
7. HV fuse resistor installed to replace the old HV choke.
8. Grid fuse protection using AG6K's resistors and caps.
9. Cooling fan rebuilt. Now very quiet and moves LOTS of air.

Have data and notes on all of the mods that were made. Plate voltage at idle
is 3100 and drops to 2600 fully loaded with 1300 watts out. Full out on
80-40-20 and slightly less on 17-15-12-10. Use auto-tuner with solid state
rigs if using the amp on 17 and 12. Use the 15 and 10 meter bands
respectively.

This is a factory modified SB-221 (SB-220 bandswitch and tuned input). No
difference than an SB-220 except the front panel reads "SB-221" and the 10
meter band switch position is not labeled.

PERFECT operating condx. Amp will be double boxed and shipped seperately
from the tubes which are Eiamc and will also be double boxed. Both items
will travel UPS ground and be insured appropriately.

$585 shipped lower 48. Take HQ-170-A, HQ-180, or 51J-4 in partial trade.

Hello All,
I have a very nice, working SB-610 monitor scope for sale. I would give it an easy 8 out of 10 for physical condition. The knobs could use a little cleaning. The trace is bright and responds to the front panel controls as expected. The vertical gain pot needs some cleaning as the trace gets noisy when this pot is adjusted. The original manual is included. $100 plus shipping from Stuart, Florida 34996.

Icom 781 HF rig with built in tuner,built in scope,built in power
supply. 150Watts, Does full
power, I put it on a dummy load and it puts out 150 Watts. Comes
with Manual,Power Cord.
No original box and no mic comes with it. This rig works 100
percent
and the scope is nice and bright. The metal cabinet that goes around
it has a few touch ups on it.
The serial number is: 01779 As I stated, everything works
GREAT. Of course this would be double boxed
and packed well.

WAS: 2,675.00 NOW: 2,500.00 FIRM
Or trade for GM300 VHF and UHF Mobiles
of equal value or Spectra Mobiles VHF and UHF. Ham Gear,
Also looking for Collins Gear. Just let me know what you have.
Reply Email.
Thanks for reading,Rich.

Source record: 70157

Gents,
I have an opportunity to procure an R-390-A locally. The gentlemen is offering me (my choice) either a 1963 Imperial Electric version or an EAC circa 1967. While we did have these on my fast frigate FF-1070 in 1987 I have no experience with them since at that time I was a radar tech. I am considering this rcvr to go with my recently acquired DX-100 and Ranger xmtrs. I am looking for a really nice, quality rcvr that SOUNDS GREAT on am. Does this qualify? Would it be a good mate to the Ranger and DX-100? Any opinion is greatly appreciated since I know virtually nothing abt these sans that they weigh > 100 pounds.

That's a form of Tungar bulb.

The name derives from the use of a Tungsten filament and Argon gas. It's a low-voltage, high current diode used mostly in battery chargers of the '20s. Copper-oxide and selenium rectifiers eventually replaced them, but some were still in use as late as the 1940s.

Might have some value to collectors and restorers.

Lame attempt at posting a virus (BackDoor-G2.svr.gen)

I haven't seen the original, but if that is the genuine
source-address above then inform <abuse@btinternet.com>,
they will TOS the perp.

Tony Williams.

Agreed
Jan
This is what I have as info about it from an other group:

Start (you find the discussion in comp.sys.ibm.pc.hardware.chips)
>>
>>It's the SubSeven trojan, you DON'T want to mess with it.
>
>Out of curiosity what does that do?

The SubSeven backdoor was first discovered in May 1999. First samples of
this backdoor
were not packed and were easy to detect.

Later version were packed and could not be easily detected by contemporary
anti-virus
programs that had no Win32 'Aspack' file compressor unpacking capabilities.
The backdoor
was distributed under different names via newsgroups and e-mails.
~~~~~~~~~~~~~~

When run, the backdoor copies itself to \Windows\ directory with the
original name of file
it was run from or as SERVER.EXE, KERNEL16.DL, RUNDLL16.COM,
SYSTEMTRAYICON!.EXE or
WINDOW.EXE. Then it unpacks a single DLL file to \Windows\System\
directory -
WATCHING.DLL. After that the backdoor patches Registry so its main
application could be
run during next Windows bootups (RunServices key) and finally creates and
modifies some
other Registry keys. The backdoor can also install itself to system by
modifying WIN.INI
file.

(this copy creates msrexe.exe, and mueexe.exe in the Windows dir, and
creates a registry
key that won't allow any application to run without musexe.exe being found.)

The SubSeven backdoor task being active in memory (and invisible in Task
Manager) looks
for TCP/IP connections, and if they are established it listens to TCP/IP
ports for
commands from client part. A person who has a client part gets control over
remote system
where the server part is installed. Here's the list of 113 SubSeven's
capablities:

Fun Manager
----
1. Open Web Browser to specified location.
2. Restart Windows.
3. Reverse Mouse buttons.
4. Hide Mouse Pointer.
5. Move Mouse.
6. Mouse Trail Config.
7. Set Volume.
8. Record Sound file from remote mic.
9. Change Windows Colors / Restore.
10. Hung up Internet Connection.
11. Change Time.
12. Change Date.
13. Change Screen resolution.

I have forsale a Drake TR-4 with the 34pnb noise blanker.front panel looks like a tr-4c with the n.b. switch,also have the RV-4 remote vfo and the AC-4 power supply.this is a very nice looking station with some small scratches on cases.radio works well 80-10 meters with 150w's output.I also have the original manual for the TR-4/34pnb.I am asking $350 picked up in Phila. I really do not want to ship but shipping would probably be about $40 u.p.s. John w3ayt@arrl.net

3754. F.S. Drake T4X,R4A,MS4 & AC4

alt.ham-radio.marketplace,rec.ham-radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

I have forsale a complete Drake station consisting of a T4X,R4A,MS4 & AC4 power supply.I also have the original manuals and inter-connect cables.this is a nice looking station all but for some cutouts on the bottom cases near rear where the previous owner had rca and bnc jacks so he could run inverters and transverters. I have since removed and restored to original electrical condition. I have also removed front panels ,knobs and cleaned the vfo dials.they do look nice. I am asking $350 picked up in Phila. also when radios are next to each other on table you cannot see the cutouts,I do understand Drake still has bottom cases available. John w3ayt@arrl.net
also, I may ship if I don't get a local buyer but would probably run about $40 u.p.s.

>Gary - KJ6Q
>= = = = = = = =
never mind, and certainly not class C linear amp (as suggested above),
but the original questions still is:

wonder what is acceptable limit of grid current in a 2x 6146B
amplifier?
ALC voltage is often derived from varying grid current over bias
network resistors, usually around 10k resistance. 1mA grid current
will develop 10V voltage drop.

Coupled via a 0.002uF capacitor to a voltage doubling rectifier with
output loaded by 0.1uF (ALC circuit) will maximum give -0.2V
A feasable voltage, the ALC circuit may not have any real function at
all
I modified the FL-dx-500 and received very good reports for improving
readability, but it still seems that few mA grid current is within
acceptable limit of grid current for this sort of amplifier using 2x
6JS6A or 6146B

Seems that for 1000W linears fraction of 1mA grid current is too much
to avoid splatter, so an exciter with 1mA grid current isn't well for
the guy 10kHz up or down....

Check the BAMA site (http://www.bama.sbc.edu, I think). I think there is a link to Collins manuals from there. Perhaps the schematic is there as well.

I have the following for sale, and could deliver them to the Charlotte hamfest next weekend. Prefer not to ship.

1. National NC-303 - $300 Very nice condition, front panel and knobs original, cabinet has been redone in satin black, top and bottom. Completely restored electronically, and correctly aligned. Everything works as it should and this is a great receiver for AM, CW, or SSB. Tuning is smooth and the receiver is stable as a rock. Even has a new 4H4-C regulator. Includes original manual.

2. Hallicrafters HT-37 - $195 Completely restored with all new caps and new finals. The front panel and knobs are original, with no broken or cracked knobs. Correctly aligned with full output on all bands. Includes the hard-to-find 11 pin plug for the control socket. Cabinet has been repainted and looks great, but is not the exact Hallicrafters color. Includes W7FG manual. This is a great sounding CW and SSB rig.

3. Central Electronics 100V - $500 Front panel, knobs, cabinet, in good original condition. Very clean. This is an unusual example in that the two front panel doors are painted with krinkle paint and the logo on the right-hand door indicates it's a 200V. A complete electronic restoration including all new filter caps and all other non-mica caps. New Svetlana 6550 finals and all new tubes in the RF chain. Full output on all bands and a very nice sounding signal. If you've ever been inside one of these, you know how much time and effort it takes to make one right again. The tuning is smooth, the way it should be. Includes W7TG manual and Jones plugs for the accessory sockets.

4. Hallicrafters T.O. Keyer - $75 New tubes, all new capacitors, spare mercury wetted relay. All original in very clean condition and it works the way it should. Original manual.

5. B&W Model 380 T/R switch - $75 Electronically restored and working properly. This is the broad-band model, similar in size and design to the Johnson T/R switch. The original finish (nickel plate, I think) was tarnished, but it cleaned up pretty well.

Please email me with any questions on these units. Can drive to meet you part way if you can't make it to Charlotte. If it doesn't sell before May, could meet you at Dayton.

Hi Gang,

This is an estate item from a silent key. I'm helping his widow sell it.

FS: BC-610F +BC-614 Speech amp. Also includes HB speech amp and RF driver with BRAND NEW 250TH tube in the final and two BRAND NEW 2A3s in the rig. Has dow key relay and low pass filter and the little Collins VFO. Also includes D-104 mike. It has all new caps in the speech amp and PTT added. Also included is the Viking 122 VFO and it's Swan power supply. He used the Collins VFO on 160 meters and the Viking 122 VFO on 80 and 40 meters. I'm not too familiar with this equipment but it is in working condition. I witnessed it in operation shortly before the late owner passed away. It is all in good condition considering its age and sold as is. These are pickup only. I am located in central Iowa. Asking price is $875 and I will not separate the equipment. For an extra $100 I'll throw in two NOS 250s and two used 2A3s. You can reach me at 515-669-7501 from 08:00 to 19:00 Central time. Of course email is OK too. Thanks and 73,

Al

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com. (aka http://www.hamexam.com -- easy to remember address--tell your mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's less than $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

Andy, you just need a 'bucking' transformer. Figure the load current, and what drop you need, then get a 'filament' transformer of that rating and hook it up to buck the line voltage. For example, lets say the line is 125V and the load is a radio taking 1.5A. You need to drop 15V at 1.5A, so get a 12 to 15v at 2A transformer. Connect the primary across the line in the usual manner, and connect the secondary in series with the line to the set. You must correctly 'phase' the secondary so it subtracts from the line voltage. Simply connect it up and measure the output. If it is 140V it is phased wrong. Reverse the two secondary leads and you should see 110V.
There are more tricks you can do to fine tune it, but this is the basics.

Source record: 70085

Use a "buck/boost" transformer of sufficient current to carry the load. The A.C. here is normally 122 volts. so a 12 volt xformer at what ever current (amps) that will handle the load..hope this helps.Gene

3781. FS/Trade Icom 781 HF,,..

Icom 781 HF rig with built in tuner,built in scope,built in power
supply. 150Watts, Does full
power, I put it on a dummy load and it puts out 150 Watts. Comes
with Manual,Power Cord.
No original box and no mic comes with it. This rig works 100
percent
and the scope is nice and bright. The metal cabinet that goes around
it has a few touch ups on it.
The serial number is: 01779 As I stated, everything works
GREAT. Of course this would be double boxed
and packed well.

WAS: 2,675.00 NOW: 2,500.00 FIRM
Or trade for GM300 VHF and UHF Mobiles
of equal value or Spectra Mobiles VHF and UHF. Ham Gear,
Also looking for Collins Gear. Just let me know what you have.
Reply Email.
Thanks for reading,Rich.

3788. E.H.Scott SW Radio schmatic/manual?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-06 00:00:00 UTC
From: WB3KUM/9 <d.breeden@NOSPAMwcom.com>
Message-ID: <38C3D876.6F6BFEA@NOSPAMwcom.com>
Source record: 70093
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.misc

I have an old E.H.Scott LW/SW radio. It covers both long wave and short wave, but no medium wave. I don't know the model, the plate is missing but it is definitely a E.H.Scott by the patent plate. It stopped working and I isolated to the IF section. It covers 455KHz so the IF can't be 455KHz.

Questions,

1 What model is this?
2 What is the IF? It seems to be about 540KHz.
3 Is there any schematics or manuals and where?
4 Are there any bulletin boards to obtain unique parts?

Many thanks in advance

Dennis

> and the particularly fun with such old types is that you often cannot
> find the connections, ACH1 has three different socket connections,
> Philips types has two, but Philips cannot tell which is which

interesting,- i've never heard about an ACH 1 having 3 different
connections... why are there problems of finding the "right" ones ?
which Philips tubes have ambiguous connections ?

mabe you refer to an "ACH 1" which is unknown to me. the real ACH 1
was developed by Telefunken in 1933 (together with the series string
version of type BCH 1). a bit later the "ACH1 S" appeared, where the
"S" stands for "Schnellheiz-Kathode" (speed-up heating).this "bifilar"
heater at the same time reduced the current (650 mA instead of 1 A).
in 1936/37 when the B-types became obsolete, the CCH 1 replaced the
BCH 1 (there's also a CCH 2 but it has different data).

for all these types i can't see any problem to identify the base
connections. while the ACH 1 and BCH 1 have a 7-pin hexode base,
the others are equipped wih 8-pin side-base sockets. in all cases
the top-cap is connected to the triode grid #1. the layout of each

type of socket is the same - therefore, the connections are uniquely
determined.

finally, Telefunken produced a special version of the original ACH 1
named "ACH 1 C" with a side-base socket. it was meant to be a
replacement-tube for radios in 2 regions which were occupied by
the nazis (in czechoslovakia / austria).

if you have infos about any other ACH 1-like tube i'd be interested
to know details !

thanks & cheers -
Herbert

3790. More Immorality in High Places

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-06 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <38C3E138.39C0038F@ix.netcom.com>
Source record: 70095

What's going on? Against all odds - and despite the best efforts of the Clinton-Gore Justice Department - Al Gore's friend and campaign cash collector Maria Hsia (pronounced: "Shaw") was convicted on Thursday of all five felony counts stemming from her and Gore's 1996 campaign fundraiser at the Hsi Lai ("She - Lie") Buddhist Temple in Los Angeles.

Networks take a nap. But the three network evening news shows - with an entire afternoon to prepare - failed miserably to uphold their basic obligations to inform the American public of this scathing story about the vice president. On ABC's "World News Tonight," Peter Jennings spent just 19 seconds on the story. On CBS, anchor Dan Rather gave the story a total of 23 seconds. And worst of all, Tom Brokaw didn't even utter a single word about Gore and his convicted crony.

On top of that, the Senate Government Affairs Committee had identified Hsia as "an agent of the Chinese government" and even Democrat Senator John Glenn's highly partisan report had called her a "consultant" to "Chinese government officials."

Imagine if a close associate of a Republican presidential candidate was branded an agent of a politically volatile government and then convicted of funneling illegal campaign cash to that candidate! Is there any doubt this story would have led every nightly news show?

Protest. Let the networks know there is a quiet majority who cares about their democracy being put up for sale in a place of worship - all for the sake of a brazen and illegal scheme to launder campaign cash through impoverished monks and nuns. Please send a message to the three networks - their e-mails, phone and fax numbers are at the bottom. Won't you please forward this e-mail to friends? Also, call radio talk shows and write letters to the editor of your local newspapers. We must talk this up in Internet chat rooms - and around every water cooler, lunchroom, classroom and union hall across America.

Shareholder meetings. General Electric owns NBC, Westinghouse owns CBS and
Disney owns ABC. If you own stock in these companies, why not find out when
their shareholder meeting are - and make your voice heard?

Hello....my name is Kent King, and I am one of the co-founders of the E. H. Scott Historical Society. I'm sure we can identify and help you with this set. If you could email me with the following information, I will identify the set, and can tell you what data I have available.

1. Tube lineup
2. The IF varies, depends on the model (we'll find out)
3. What are the exact ranges of the set (standard AM, FM, etc?) Exact numbers here really help.
4. Depending on the model, I may be able to help you obtain odd parts too. Let me know, my email address follows:

Thanks!

Herbert

it is interesting to read, cannot make so many comments. Got the info
from my friend LA9DL (can give his email on request) who is
specializing on old valve data, he will borrow my old Luftwaffe DMW
R&#65533;hren for photographing....

Wasn't aware of BCH1
My book also mentions KCH1, Mischr&#65533;hre f&#65533;r batteriegespeiste
&#65533;berlagerungsempf&#65533;nger, but seems not to be compareable since it has
maximum anode voltage of 135V, but only data I have for ACH1 is
shortform data in the RTT book from Franzis Verlag and Vademeccum
1965-67, while some data is found in
R&#65533;hren und Daten moderner Empf&#65533;nger und Kraftverst&#65533;rkerrohren -
Philips 1940, but not ACH1 and BCH1

Well, let's see. The HF on the Super Connies started as the 618T, then to the "S". (In reality they originally had the AM precursor to the 618 series). Nav was the ARN-14 VOR with an ID-249 and the ID-250 RMI. I don't recall the Glide Slope receiver... a 51R..something. Maybe a BC-733 on the early types. The ADF was dual ARN-6's (AS-313 loops). The only reason I have any idea is that my sqdn got stuck with emergency maint on them from time to time. Any help?

Icom 781 HF rig with built in tuner,built in scope,built in power
supply. 150Watts, Does full
power, I put it on a dummy load and it puts out 150 Watts. Comes
with Manual,Power Cord.
No original box and no mic comes with it. This rig works 100
percent
and the scope is nice and bright. The metal cabinet that goes around
it has a few touch ups on it.
The serial number is: 01779 As I stated, everything works
GREAT. Of course this would be double boxed
and packed well.

WAS: 2,675.00 NOW: 2,500.00 FIRM
Or trade for GM300 VHF and UHF Mobiles
of equal value or Spectra Mobiles VHF and UHF. Ham Gear,
Also looking for Collins Gear. Just let me know what you have.

From: D&N <allenmapsons@99main.com>
Message-ID: <sc8o0sb3bi7118@corp.supernews.com>
Source record: 70113

Over the weekend, I bought a Heathkit AR-3 with 2 tubes missing. Can anyone describe the socket layout for the AR-3? Across the rear of the chassis from left to right as seen from the back of the radio there is a 12A6, an empty socket, a 12AV6, and the 5Y3GT. The socket next to the variable tuning condenser is empty. I'd like to know what the missing tubes are and which sockets they go into?
Thanks,
Dick

Great info - and reassuring - Al. The FET swap in the 101E's sure made
a BIG improvement, don't know if the 101ZD's were down on sensitivity
like the 101E's were on the higher bands - guess I will find out!

If anyone else has mod info on the 101ZD, sure would appreciate it.

Hello

I have a Breting 9 receiver which needs some minor repairs. I would appreciate someone telling me where I can locate a schematic for it.

Thanks John Russo KF2JQ

3822. Re: FT-101ZD mods?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-07 00:00:00 UTC
From: Mike Sanders <k0az@swbell.net>
Message-ID: <38C5894A.1F9D3334@swbell.net>
Source record: 70001
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

The 101ZD has one of the quietest IF chains around. Does not suffer from poor sensitivity, overload or any other poor performance I can think of. The noise blanker which is front panel adjustable WORKS. Smooth clean audio and just simply a terrific receiver. The ZD is nothing like the earlier
101s and was one of the best kept secrets in ham radio regarding it's performance. The later Mark II and Mark III had upgrades including the warc bands and the ability to include a board for AM OR FM but not both at the same time. The APF audio peak filter and audio notch filter really works. The rig comes standard with cascaded crystal filters I believe and there was an optional (600hz ??) CW filter available.

Sometimes the push buttons would oxidize on these radios and cause freq drift etc. Simply pushing and activating the various buttons from time to time would "fix" this. If memory serves the VFO select and RIT buttons would cause this problem. No big deal though.

Basically I do not know why anyone would want to modify a ZD. They are fine radios and totally underated and discounted by the masses.

Congrats and good luck. You have a nice rig. 73, Mike K0AZ

heh...heh...I did last night!! I got my HT-37 restored to the point of
trying her out on SSB.
Worked a bloke in W WA. Talked to him for well over half an hour, and my
two oldest
sons (10 and 6) thought it was a hoot to talk into the "chicken choker"
G-104 to the guy!!
Hmmmm....have to pursue this farther.....

Seriously though, ham radio is in for some stiff competition from the
internet. It's cheaper
to buy a computer and pay for a monthly ISP, than it is for a teenager to
convince his parents
to buy a ham radio setup. The real killer is that you don't have to do any
work to get on the
internet. No work, no feeling of accomplishment; that's something that is
lacking in today's
youth. We could also use another Heathkit company. Man, was I proud when I
built my HW-7 etc!!

We need to lead by example though. I'm trying to start a group associated
with our Home School
group in York county. Hopefully, we can get kids interested in this hobby.
If those kids think it's
a hoot to operate my old BA gear, fine!! Maybe that'll be an entry point
into ham radio for them.
Also, I think BA gear can offer some really neat experiences for our youth.
They have grown up
in the pushbutton computer era. Manually adjusting BA equipment could
provide an alternate
experience for them; in other words, a "cool" thing to do!! We have an
opportuity here guys....

No, I'm not anti-computer (I've been a software engineer for almost 18
years). I just don't like what the
internet is doing to today's youth.

3827. Help with Hammarlund HQ-170

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-07 00:00:00 UTC
From: thal70 <thal70@mindspring.com>
Message-ID: <8a4b1hemj1@nntp3.atl.mindspring.net>
Source record: 70006

Would appreciate any help with a somewhat perplexing problem with this receiver:
When listening to the receiver in SSB mode and with the selectivity switch in 0.5 or 1.0 khz, all is fine. But when switching to 2.0 or 3.0 khz selectivity, the S-meter goes to nearly 20-40 db (as if receiver is generating a carrier on its own) and there is a tone which I can vary with the BFO pot. As soon as I switch to the narrower bandwidths, the carrier and tone both go away. All tubes check fine.
One last thing... I did replace about 10 or so original paper caps just for piece of mind however, before I did this, the receiver did NOT have this problem. Realizing the difficulty in diagnosing such a problem over the internet, If someone knows of a general place to start, any help would be appreciated.
Thanks much!, Dave

Hello--
I have a Heath SB-610 monitor scope available for $50.00 (sorry, no manual) plus postage to your QTH.

The unit appears to work (the CRT shows a bright, stable trace), but I don't have a method of performing a full checkout.

E-mail me for details, incl. photos.

1. Antenna tuner from the ARRL handbook. Has a home-built cabinet, with a funky little meter and some nice construction. 200 watts, maybe. The parts alone are worth more than this: $ 40

2. Antenna relay box, with a heavy duty 110v DPDT relay, coax connectors, an on-air light, great for older BA's $ 20

3. A really wonderful AC power monitoring box, in a cabinet 12 w, 9 h, 6 d. Has three 6.5 inch meters that tell you AC volts (90-130), Amps (0-20) and Hertz (55-65). So you can tell not only the voltage, amperage but also the frequency of the AC. Hooks up to 220 or 110. Meters alone are worth the asking price: $ 75

I'm awaiting delivery of a new-to-me Yaesu FT-101ZD, and am wondering what sources may be available for upgrading this rig, especially in regards to receiver sensitivity on the upper bands, as well as reducing internal noise floor. The 101E I owned years ago was GREATLY improved by a better grade solid state device (RCA) in the first RF stage, as well as the first and second IF - I assuming the 101ZD might also benefit from a similar mod if one is available?

Would appreciate any pointers - wonder if "FoxTango" is still in operation?

Gary I don't have a lot of mod info but want to say there is no comparison in design between the 101Z and the 101E the 101Z is about equal to the 901DM / 902DM modular construction w/ plug-in bds. Rx fet probably can ve up-dated and I expect a change of the mixer would be a fb idea also. The noise floor is the killer as we know, mixer noise needs to be very low. I used to own 901 & 902 excellent radios. gl 73 Al k2spo

3864. Lettine Radio

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-07 00:00:00 UTC
From: Stu Cohen <stucohen@gte.net>
Message-ID: <2T1x4.1740$DB1.297387@dfiatx1-snr1.gtei.net>
Source record: 70128

Can anyone shed some light the historical background of the old Lettine Radio in Valley Stream, L.I., N.Y.? I remember the ads in QST and The Radio Amateur's License Manual when I first got a ham ticket, back in 1954. They ran ads for their now elusive products from about 1953 through the early '60's and had an ad in just about every month's issue of QST during those years.

I operated a Lettine 240 transmitter in my early years as a ham on both CW and 'phone and I'm fortunate to have found one recently. It ran about 40 watts to an 807, plate modulated by push-pull 6L6's and sold for $79.50 back then. Although its power level was low, the AM modulation characteristics were excellent, and its sheer "talk power" could better most of the higher power transmitters of the day. Lettine's transmitters were virtually hand made in a garage operation...I think he was located at 62 Berkeley St, Valley Stream, L.I., N.Y. He always had a few of the 240's already built and ready for sale, but he made other transmitters for the VHF bands as well, and some were made to order. I remember there were transmitters for both 2 and 6 meters (2E26 finals)...and I recently found an uncommon Lettine 262, for both 2 and 6 meters with a separate RF section (5763's driving a 6146) for each band with a common plate modulator (12AT7 speech amp, 6V6 phase inverter, push-pull 6V6 modulators). These were all nicely built and represented good value for their operating characteristics. He always used lots of iron...husky power transformers and filter chokes with good modulation transformers. He prided himself on the quality of the audio...always 100% modulation with broadcast-like quality.

I wonder what happened to the company and I'd be interested in learning more about their history. They certainly were interesting boat anchors!

Hello All,

I got a mod xfmr from an old Valiant and need to
identify how the "Class C" side is wired. I have 4 wires,
2 half's of the winding. Apparently the connection between
the two was the 500 ohm output for external loads.

One part of the "Class C" winding has a green
lead and the other end of that winding has a green/yellow
lead. The other part has two muddy brown leads.

How could I go about "phasing" the two half's
of the class "C" side. I wont need the 500 ohm tap
for my application.

TIA

Source record: 70140

I'm placing this entry for an English friend who is not on the Internet.
He has a BC-652/653 radio installation for sale or swap. It is a WWII
vehicle set 1.5 to 6MHz and it is doing around 50Watt AM now.
Originally it is on a 12 volt 30 Amp power supply but some 15 years ago I
changed it to a 220 volt AC power supply and added a additional modulator
stage. All additional components are build in the original dynamotor power
supply frame and the set appears to be 100% original form the outside except
from the fact that the set now works in silence instead of with the noise of
4 vacuum cleaners working together. All changes are documented.

I made a swap deal on this set with him some time ago but he wants to make
room for other equipment.
The set is in excellent condition and consists of the RX, TX and mounting
and is perfect to use as a vintage military radio station.
I can give information on how it was changed but if you are interested best
thing is to get in contact with Tony Helm
Tel. 44 1752 261345, he lives in Plymouth UK.

I bought a new IC-746, which includes 2 meters, so have an excellent TS-780 dual-band multimode transceiver available. It's 10 watts on 2 or 432, SSB or FM. It's in perfect physical and operating condition, comes with hand mic, original box and operating manual. I am the original owner. This is a base station rig with its own built-in AC supply, and is about the same size as a TS-450. Its been a great rig, but something better came along...

Price is $400 - reply via Email

Looking to trade:
1 Motorola Micor Tested Working W/ Control Head (Freuency Counter showed 800 mhz.)
1 Motorola Pulsar Tested Working W/ Control Head (Frequency Counter showed 150 mhz.)
2 Motorola Motracs Unknown Frequency Untested No Control Head

I was going to convert the 2 first ones for repeater use, but didnt want to attempt it in case I blow them up. So I will trade all 4 radios for a working Converted for Repeater use GE Master II or Motorola Micor on either 2 meters or 220mhz amateur bands ready to use, Controller Ready....

The Micor and Pulsar look in good shape and are working. The Motracs are ugly and untested because there is no control heads.

Here is the info for the radios:

Motorola Micor:
FCC XMTR DATA: CC5010
FCC RCVR DATA: RC0071
MODEL #: T45RTA6B00AA
SERIAL #: 439CDS1200

Motorola Pulsar
MODEL: T1776A
RCVR: RC0047
FCC TYPE: CC3225
SERIAL: RR6210

Motorola Motrac #1:
MODEL: U43HHT-11300
TRANS TYPE: CC3009
SERIAL#: E-14787

Motorola Motrac #2:
MODEL: T43MHT-1190C
TRANS TYPE: CC3059
CABLE TYPE: 2
SERIAL#: Not Visible

I would prefer a local trade (Redding, CA.) but will ship in the US.
If interested or have a question, Reply to cobra@no-spambudweiser.com
Be sure to remove "no-spam" from my e-mail address to reply.
Thanx

Attention TV and Radio Producers!

AVAILABLE IMMEDIATELY . . . DR. LOUIS TURI

Let your audience enjoy Dr. Louis Turi, controversial topic on Astropsychology and Spirituality. Your telephone lines will be ringing non-stop as he informs your audience about the structure of the cosmic mind and explain why kids kill other kids. Dr. Turi gives solid and practical answers to where the mundane psychology and psychiatry field failed to give answers on the working of our children mind. Rest assured of an incredible show and an amazed audience.

POPULAR ON DEMAND, TOPICS:

Dr. Turi is a charismatic interview subject who will captivate your audience immediately. At the dawn of the millennium, there is a serious demand for direction and information on original topics. You can be sure of a fantastic response from your audience, and be ready to book him again! His forte is giving short personal Astropsychology readings and direction for your listeners. He simply requests the name and date of birth of the caller. His gift will amaze you and the audience. Meanwhile, like many other radio hosts, your ratings will shoot to new heights.

Have him on air and see why people can't get enough of him. Referrals from broadcasting professionals, books, or his bio can be sent to your attention upon your request.

BOOKS IN PRINT

ï¿½ 2000 Moon Power - Starguide (in its 5th year of production)
ï¿½ The Power of the Dragon (Nostradamus rare method of Divine Astrology)
ï¿½ Nostradamus 2000 Dragon Forecast and Characterology for all signs

STARTHEME PUBLICATIONS
Publishers of True Knowledge in Astrology and Astropsychology
NEWS Press Release

Attention all Promoters, Radio and Television Hosts Reps!
If you are an individual with a radio or television program and would like to assure your audience an incredible time, please contact us at your earliest convenience.

Dear Sir or Madam,

I would like to call to your attention to a fascinating author, Dr. Louis Turi. Like his eminent predecessor, Nostradamus, he was born and raised in Provence, France. He is a noted an unusual astrologer of unparalleled track of unarguable predictions in our modern time.

Dr. Turi is a very unusual astrologer and, like Nostradamus, used to do he also uses the location of the Dragon's Head and Tail in his forecast. The response from Dr. Turi's teachings and books are just phenomenal. I am sure you will be, as much as your audience fascinated by his metaphysical knowledge. Please do not hesitate to contact me at the above-mentioned address and telephone number for any questions you may have.

Dr. Turi is regularly on national radio and his infomercial will be aired nationwide and Canada early 2000. If you are interested in booking Dr. Turi on your show I will be glad to send you more on his biography and copy of his books. Dr. Turi is the only Astrophile in the world that has been granted financial support from much Board of Directors to produce astrological videos and forecast on respective California and Nevada cities.

He also performs Astropsychology readings for people as well as predictions on the daily occurrence for the world. He is able to depict what each and every individual in this world is going through by just asking, "What month were you born?" He is also able to clarify to anyone everything that they've been through, buy knowing their date of birth. Not only is Dr. Turi an Astrophile that predict occurrences but also is also extremely practical and has quite a gift that needs to be shared to the whole world. Once you have discovered his talent you can be sure that your life will change in the most positive light. His simple personality and his incredible gift will amaze your audience. For more details you may call me and I will have Dr. Turi talk directly to you for a sample of what will be discussed on your show.

Please let me know if you would like to schedule an appearance on your show and I thank you again for your consideration.

Waiting in anticipation.

Sincerely, ~ Promotional Manager ~ Startheme Publications

Message-ID: <38c85956.5344350@news.earthlink.net>
Source record: 69952

Icom 781 HF rig with built in tuner,built in scope,built in power
supply. 150Watts, Does full
power, I put it on a dummy load and it puts out 150 Watts. Comes
with Manual,Power Cord.
No original box and no mic comes with it. This rig works 100
percent
and the scope is nice and bright. The metal cabinet that goes around
it has a few touch ups on it.
The serial number is: 01779 As I stated, everything works
GREAT. Of course this would be double boxed
and packed well.

WAS: 2,675.00 NOW: 2,500.00 FIRM
Or trade for GM300 VHF and UHF Mobiles
of equal value or Spectra Mobiles VHF and UHF. Ham Gear,
Also looking for Collins Gear. Just let me know what you have.
Reply Email.
Thanks for reading,Rich.

Subject: 110 volts how to?

What is the best way to get 110 volts out of my wall sockets? Use the old
variac, or is there another way that is quieter and cooler?
Thanks much
Andy

Subject: >>TUBES AVAILABLE<<

TUBES AVAILABLE

I currently have over 300,000 tubes in stock. Have a good selection of both
new and used/tested tubes for audio, CB & HAM radio, TV, CRT use.
Sorry I do not have a Web Site nor a price list. Suggest that you Email or
Fax me with the tubes that you are looking for along with the quantify of each
needed. I will check my inventory and advise you of current availability and
cost.
In addition, I also have a very good selection of tube testers, tube caddies
and good used CB/HAM equipment. Please contact me regarding your needs.
Thank you for your consideration.

From: "Nico van Dongen" <nico.vandongen@compaq.com>
Subject: BC-652/BC-653 WWII radio installation

I'm placing this entry for an English friend who is not on the Internet.
He has a BC-652/653 radio installation for sale or swap. It is a WWII
vehicle set 1.5 to 6MHz and it is doing around 50Watt AM now.
Originally it is on a 12 volt 30 Amp power supply but some 15 years ago I
changed it to a 220 volt AC power supply and added a additional modulator
stage. All additional components are build in the original dynamotor power
supply frame and the set appears to be 100% original form the outside except
from the fact that the set now works in silence instead of with the noise of
4 vacuum cleaners working together. All changes are documented.

I made a swap deal on this set with him some time ago but he wants to make
room for other equipment.
The set is in excellent condition and consists of the RX, TX and mounting
and is perfect to use as a vintage military radio station.
I can give information on how it was changed but if you are interested best
thing is to get in contact with Tony Helm
Tel. 44 1752 261345, he lives in Plymouth UK.

From: "Gary - KJ6Q" <davison7@gte.net>
Subject: FS - Kenwood TS-780

I bought a new IC-746, which includes 2 meters, so have an excellent
TS-780 dual-band multimode transceiver available. It's 10 watts on 2
or 432, SSB or FM. It's in perfect physical and operating condition,
comes with hand mic, original box and operating manual. I am the
original owner. This is a base station rig with its own built-in AC
supply, and is about the same size as a TS-450. Its been a great rig,
but something better came along...

Price is $400 - reply via Email

Subject: FS/Trade Icom 781 HF,,..

Icom 781 HF rig with built in tuner,built in scope,built in power
supply. 150Watts, Does full
power, I put it on a dummy load and it puts out 150 Watts. Comes
with Manual,Power Cord.
No original box and no mic comes with it. This rig works 100
percent
and the scope is nice and bright. The metal cabinet that goes around
it has a few touch ups on it.
The serial number is: 01779 As I stated, everything works

GREAT. Of course this would be double boxed
and packed well.

WAS: 2,675.00 NOW: 2,500.00 FIRM

Subject: FS 60's Homebrew gems

1. Antenna tuner from the ARRL handbook. Has a home-built cabinet, with
a funky little meter and some nice construction. 200 watts, maybe. The parts
alone are worth more than this: $ 40

2. Antenna relay box, with a heavy duty 110v DPDT relay, coax connectors,
an on-air light, great for older BA's $ 20

3. A really wonderful AC power monitoring box, in a cabinet 12 w, 9 h, 6 d.
Has three 6.5 inch meters that tell you AC volts (90-130), Amps (0-20) and
Hertz (55-65). So you can tell not only the voltage, amperage but also the
frequency of the AC. Hooks up to 220 or 110. Meters alone are worth the
asking price: $ 75

.

From: Mike Sanders <k0az@swbell.net>
Subject: FT-101ZD mods?

The 101ZD has one of the quietest IF chains around. Does not suffer from
poor sensitivity, overload or any other poor performance I can think of.
The noise blanker which is front panel adjustable WORKS. Smooth clean

audio and just simply a terrific receiver. The ZD is nothing like the
earlier
101s and was one of the best kept secrets in ham radio regarding it's
performance. The later Mark II and Mark III had upgrades including the
warc bands and the ability to include a board for AM OR FM but
not both at the same time. The APF audio peak filter and audio notch
filter really works. The rig comes standard with cascaded crystal filters
I believe and there was an optional (600hz ??) CW filter available.

Sometimes the push buttons would oxidize on these radios and cause
freq drift etc. Simply pushing and activating the various buttons from time
to time would "fix" this. If memory serves the VFO select and RIT buttons
would cause this problem. No big deal though.

Basically I do not know why anyone would want to modify a ZD. They
are fine radios and totally underated and discounted by the masses.

Congrats and good luck. You have a nice rig. 73, Mike K0AZ

This is an extremely nice Scott Marine receiver with cabinet. Aluminum cabinet, various selectivity positions, BC band to 18 Mhz, very well made. This is a commercial model sold after WWII and appears to be identical to the military model used for troop entertainment with a design made to minimize radio emmissions for security. Very solidly built and comes with manual for the identical military version. See ebay http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=277204261

Thanks for looking.

hi Jan-Martin,

yes, there's a KCH 1, but as you said it's a quite different
tube compared to the A/B/CCH 1. the KCH 1 was introduced 2-3
years later around 1935/36, together with some other K-types.

they all have 2-volt filaments and were mainly dedicated for
portable battery sets (due to the 1936 olympics in berlin the
demand for these radios had a significant peak).

the ACH 1 and BCH 1 have identical specs, apart from the
filament: the 2nd type is for series heater circuits and
takes 180 mA at approx. 24 V DC (in those days quite a few
regions in germany had a 220 V DC mains, therefore many
german radios from the 30s were designed for AC and DC)
or even for DC, only.

bye for now -
Herbert

Hi!
Reading about the A-series of german tubes, it reminds me about a beautiful german radio the family to a friend had in the 50's. I think it was a Loewe, made in the late 30's. Anyway, the chassis was so beautiful and sturdy made, it looked like a million! The workmanship has never been matched by any manufacturer I think, not even Tandberg! I am talking about series production for ordinary consumption, not that gold-plated show-off hifi stereo stuff they make for people with too much money!
Of course, the german war radio stuff are also in a class by itself and are very much collector's items. But how about the mentioned civilian radios, are they being collected?
Also, I have seen pictures of german prewar television receivers, seemingly with the same nice workmanship. They must cost "a million" today, if obtainable at all!

Greetings,
Alf Jacob Munthe

REDUCED:

Hallicrafters SX-24 Defiant receiver. Needs minor work,
but is an excellent candidate for total restoration to
museum quality. No dings or dents. Needs s-meter.
original S-meter not present but has NICE
Hallicrafters SX-99 S-meter in place. The set has a
missing output transformer (common single ended type),
but appears to be complete and could be made to work
with minor repair. Has all original knobs and the
front panel shows well. The cabinet has the
cool-looking louvres on the sides, which match
the speaker used with both the SX-24 and SX-28 series.

Will sell for $145.00 plus shipping

I think Mouser Electronics sells them now. Check their catalog. I think they started selling them in 98.

I have a Wilcox 96D transmitter for sale. 1953 built. This is the one
with the works in a drawer slide out cabinet. Tall and narrow.
Has two 250THs in it now but two 450THs can be used. Excellent design
with large Jennings Vac variable. No power supply. I need the space!
It is in very nice condition. It's small enough to fit in any shack,
It's only 12" wide X 6'H. Covers 160-20M
I have JPGs on request.
$650 pick up or you crate from FtLauderdale Florida.

To Group:
Thanks very much for the input from personal Emails, etc. I found the problem--it was one 0.1/200v cap that I put in the wrong place. I was one connector off! I found this from suggestions to re-check caps in the 60 Khz IF section and there was my mistake. I re-aligned the IF and BFO sections and it works beautifully now.
Thanks very much again!! Dave

Are you sure that you wired in those replacement capacitors correctly...? Being off by one lug on a terminal strip or one pin on a tube socket would make a significant difference.

If it were me, I would probably start in the IF chain, where you probably replaced a paper capacitor that was in this circuit, one that's responsible for setting up the selectivity skirt(s)... if you don't have a schematic for the receiver, you're going to need one for this job... good luck.

I've used the R6000 for about 9 months. When it rains the bandwidth, 2:1 VSWR points, tightens up only on 20 meters. The antenna is tuned for 14200 and remains at 14200, but the vswr increases from 1.3:1 at band edges to about 2:1 at band edges. On occassions I put 1KW into it with no signs of arcing etc.

The performance on 10 through 17 is flawless.

Deacon Dave, W1MCE

Hi Munoz

You can get excellent copies of all Eddystone manuals from the Eddystone User Group in the UK. They ask £10 each, though. I can let you have an email address for them if you are interested, but would suggest you are less terse as they are English.

Regards

Simon

3927. FS: Collins WE KWM-2/516F-2 *NEEDS TLC*

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-09 00:00:00 UTC
From: mc@REMOVE.sover.net
Message-ID: <38c79dfc.4987218@news2.sover.net>
Source record: 69897
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I have a nice clean Winged emblem COLLINS KWM-2 that needs some
experienced TLC. It is in extremely clean condition and is very
suitable for someone who wants a Collins station to operate and enjoy.
There is only one minor modification to the KWM-2 - someone has
removed the RF OUT 'RCA' jack and replaced it with a BNC connector.
It is a reversible modification but it is undoubtedly a far better
connection for the RF cable than the RCA jack, whose ceramic
insulators tend to break with use.

Electrically speaking there appear to be no mods other than what was
mentioned earlier. However it needs some attention and a few parts,
such as a new ON-OFF switch and a complete alignment. It does receive
and I can load it up on 75 meters to 100 Watts but I want to be safe
in saying that the radio is not in operating condition as it sits.

The KWM-2 cabinet is clean but has a few minor scratches.

I also have a 516F-2 power supply that is missing the cabinet as it
was once mounted inside a 30S-1 amplifier. It has plug-in solid state

rectifiers that could be easily replaced by tube rectifiers should the
new owner so desire.

I am asking $600.00 for the KWM-2 and $250.00 for the 516F-2 supply.
I will not sell the supply until the KWM-2 is sold so as to give the
purchaser the option of buying the supply as well.

If interested please reply by e-mail.

Cordially,

Michael Crestohl, W1RC

Subject: FT-101ZD mods?

I'm awaiting delivery of a new-to-me Yaesu FT-101ZD, and am wondering what sources may be available for upgrading this rig, especially in regards to receiver sensitivity on the upper bands, as well as reducing internal noise floor. The 101E I owned years ago was GREATLY improved by a better grade solid state device (RCA) in the first RF stage, as well as the first and second IF - I assuming the 101ZD might also benefit from a similar mod if one is available?

Would appreciate any pointers - wonder if "FoxTango" is still in operation?

From: "D&N" <allenmapsons@99main.com>
Subject: help with Heathkit AR-3

Over the weekend, I bought a Heathkit AR-3 with 2 tubes missing. Can anyone describe the socket layout for the AR-3? Across the rear of the chassis from left to right as seen from the back of the radio there is a 12A6, an empty socket, a 12AV6, and the 5Y3GT. The socket next to the variable tuning condenser is empty. I'd like to know what the missing tubes are and which sockets they go into?
Thanks,
Dick

Herbert

it is interesting to read, cannot make so many comments. Got the info
from my friend LA9DL (can give his email on request) who is
specializing on old valve data, he will borrow my old Luftwaffe DMW
R&#65533;hren for photographing....

Wasn't aware of BCH1
My book also mentions KCH1, Mischr&#65533;hre f&#65533;r batteriegespeiste
&#65533;berlagerungsempf&#65533;nger, but seems not to be compareable since it has
maximum anode voltage of 135V, but only data I have for ACH1 is
shortform data in the RTT book from Franzis Verlag and Vademeccum
1965-67, while some data is found in
R&#65533;hren und Daten moderner Empf&#65533;nger und Kraftverst&#65533;rkerrohren -
Philips 1940, but not ACH1 and BCH1

> and the particularly fun with such old types is that you often cannot
> find the connections, ACH1 has three different socket connections,
> Philips types has two, but Philips cannot tell which is which

interesting,- i've never heard about an ACH 1 having 3 different
connections... why are there problems of finding the "right" ones ?
which Philips tubes have ambiguous connections ?

mabe you refer to an "ACH 1" which is unknown to me. the real ACH 1
was developed by Telefunken in 1933 (together with the series string
version of type BCH 1). a bit later the "ACH1 S" appeared, where the
"S" stands for "Schnellheiz-Kathode" (speed-up heating).this "bifilar"
heater at the same time reduced the current (650 mA instead of 1 A).
in 1936/37 when the B-types became obsolete, the CCH 1 replaced the
BCH 1 (there's also a CCH 2 but it has different data).

for all these types i can't see any problem to identify the base
connections. while the ACH 1 and BCH 1 have a 7-pin hexode base,
the others are equipped wih 8-pin side-base sockets. in all cases
the top-cap is connected to the triode grid #1. the layout of each
type of socket is the same - therefore, the connections are uniquely
determined.

finally, Telefunken produced a special version of the original ACH 1
named "ACH 1 C" with a side-base socket. it was meant to be a
replacement-tube for radios in 2 regions which were occupied by
the nazis (in czechoslovakia / austria).

if you have infos about any other ACH 1-like tube i'd be interested
to know details !

thanks & cheers -
Herbert

Nope, this was radios from the late 30's. "Modern" superhets, with the
A-range tubes. It was probably top-of-the-line stuff from that area. I will
look thru my NRHF schematics.

The UM4 fil is for 12.6V also.
Yes. There were also the 50mA 'V' tubes, believe they were only used in
small <3 tubes sets (Volksempf., Deutscher Kleinempf&#65533;nger)

>
> The philips book mentioned earlier shows an application note for

Both tube series were used, but I've seen the '21' series tube set more often
than the single-digit U-tubes with octal base.

Subject: Military Avionics -- 1950's Question

Well, let's see. The HF on the Super Connies started as the 618T, then
to the "S". (In reality they originally had the AM precursor to the 618
series). Nav was the ARN-14 VOR with an ID-249 and the ID-250 RMI. I
don't recall the Glide Slope receiver... a 51R..something. Maybe a
BC-733 on the early types. The ADF was dual ARN-6's (AS-313 loops). The
only reason I have any idea is that my sqdn got stuck with emergency
maint on them from time to time. Any help?

I doubt you will ever find a single circuit attneuator to handle all those frequencies. You have capacitance, reactance, and lots of variables that change with frequency. It will have the tendency to tune at various frequencies, changing the attenuation. Better buy several for different bands that tune.

The tube next to the variable capacitor is the 12BE6. Right in front of it (looking from the back) is the 5Y3. To the right of the 5Y3 is a 12BA6. Next to that is the 12AV6. The rightmost tube is the 12A6 or 12V6. Hope this helps.

Dick, by the way, I tried to respond directly to your e-mail address and the message bounced. Please contact me directly.

From: Dan Davenport <w5vj@swbell.net>
Message-ID: <38C7CB7D.324B@swbell.net>
Source record: 69903

A NC 183 which I bought sight-unseen, arrived yesterday.
I was surprised to see that the bandspread dial was for the foreign-broadcast bands rather than the ham bands. The mod(?) appears to have been done at the factory or as part of a special subcontract by someone. It's too good for homebrew. Maybe this is common. I just thought they were ham bandspread only. Anybody know?

Thanks

Dan

Hi Michael,

I will buy your KWM-2 and 516F-2 if the equipment is as stated.
Please send me your address and I will send you a certified check in
todays mail.

Thanks,

Dave / W6TE

I was told years ago that Heathkit only made the HL-2200 amplifier
for a couple of years because it was capable of so much more output.

Does anyone have the modifications for the HL-2200 or schematic?
Does anyone know the history of this amplifier and can pass your
wealth of knowledge to me.

Thank You!

Dino...K6RIX

Herbert

you seem to have some interesting sources of information!
Have you ever seen any applications for RV2,4P45 and DAH50, believe
they are almost the same type of valve (Raumladegitter - gibt es ein
�bersetzung?),

DAH50 is mentioned in the Philips book(anno 1940), and an application
for simple battery operated receiver is shown, but I am not aware if
this type of valve has been used in commercial receivers

I bought a new IC-746, which includes 2 meters, so have an excellent
TS-780 dual-band multimode transceiver available. It's 10 watts on 2
or 432, SSB or FM, digital display. It's in perfect physical and
operating condition,
comes with hand mic, original box and operating manual. I am the
original owner. This is a base station rig with its own built-in AC
supply, and is about the same size as a TS-450. Its been a great rig,
but something better came along...

Price is $400 - reply via Email

I might have been wrong suggesting the single digit types, forgot to
look at base type. Isn't octal after loctal - like 30 after 20-series,
so it is just sort of Philips using a odd order of numbering these
U-type 100mA series-heated valves (?)

Sounds like either a problem with the slot and the 60 kcs IF alignment. Make sure you use a good
sig generator (even with a URM-25D its hard). Frank Lester (the father of the HQ170) told me aligning the IFs
is a must. In his notes he also mentions a BFO problem that occurs if one of the IFs is out. He suggests going thru the entire alignment again. I had the opposite problem in that mine sounds great on 3.0 and 2.0 khz but the sigs drop off 20 DB when I switch to ,5 or 1.0 khz.

There was some info and a circuit diagram for a rx using the DAH50
published in the Radio Society of Great Britains "RadCom" a few years
ago. Apparently there were some construction projects for this valve
published after the war, but I've not heard of any commercial applications.
If it's of interest, I'll try to dig out the info.

Hi,

I got a lot of these - about 75 - 80 I think. They have a B7G socket
and is about the same size as a 6AQ5 valve. All metal. Yellow colour.
The label says:
IF AMPLIFIER AM-427 A/U
FISHER RADIO CORPORATION
U.S.

Inside this hermetically sealed box there is a complete IF-amp. One
5678 subminiature valve, two inductors a few capacitors and resistors.

They are all new and in original boxes. I really don't need them
myself, but maybe there is anyone out there who do?
E-mail me if interested I can send a pic.

Regards,

Arnold Goksyr

3960. TS 440 ANT TUNER FIX

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-09 00:00:00 UTC
From: Tim & Cathy <pmedic@eznet.net>
Message-ID: <38C8289B.5C8F@eznet.net>
Source record: 69930

The automatic antenna tuner in my Kenwood TS 440S became erratic and would not tune my antenna on any band. The servo motors would continuously hunt and the swr remained >6:1.

The source of the problem was the change over relay, RL1, in the auto tuner. The MATSUSHITA DS2-M relay had burnt contacts. This relay has a clear case and once the tuner was removed from the transceiver, the problem was apparent.

I ordered a replacement relay (P/N S51-2417-05) from a Kenwood parts vendor and received an OMRON G6-234P. This relay is a direct replacement for the MATSUSHITA relay.

Replacing the relay corrected the erratic operation of the tuner.

I hope this info will help anyone experiencing a similar problem with their TS 440S

hi
wasn't really such application, but G3VA got a letter from a German
who bought the valve in 1940-45 for a purpuse of building a receiver,
this note caught my intention for this valve, and I later studied the
application note in the Philips book

Prewar German consumer radios are becoming more and more collectible, especially in the USA. I've been collecting them for a few years now and am gratified to find more and more of them coming up from sources in Germany and throughout Europe. They are generally top flight construction, especially sets made from 1935 onwards!

Folks --

I have a Bliley Crystal Tube (100Kc) that is supposed to be a replacement for the Hallicrafters T-9E Crystal Calibrator tube. It's a Bliley Crystal BG9D (SN 681D). The interior is different, and I'd like to verify that it's pin for pin compatible. However, the center orientation pin is busted off, exposing the inside to air, so that may make my first question moot!!

Thanks

Mark K3ZX

Hi,
It is 99% same as SB221, same transformer, RF circuit parts, etc. The
only difference is the cabinet and addition of a stand by switch. It is
a good amp but it could be modified better. See AG6K mod. on old QST.
Good luck.

you will find a link at www.nrhf.no

circuit diagrams for several receivers which were available on the
domestic marked have been reprinted by Norsk Radio historisk forening
and distributed to the members, these include some German

believe most German BC radios were usually not as complex as you find
in other countries to compare, and to large extent used simple
regenerative circuits, perhaps your set was made for a different
application?
Have seen some better receivers mentioned in GFGF's magazine
(too expensive to subscribe)
Those B-series valves feels unknown to me, but I might not be too well
informed, the U-series is more common, and even with 110VDC it is
sufficient voltage drop with 3-4 valves to avoid too much heat in
extra resistor.

UBL1 - 55V
UCH4 - 20V
UF9 - 12,6V
UM4 - 6,3V
UY1(N) - 50V

The philips book mentioned earlier shows an application note for receiver using UCH4, UF9, UBL1, UY1 (N), but more commonly found - I believe - is UCH4 UCH4 UBL1 and rectifier (or was it UCH21 UCH21 UBL21 UY1(N)) ..?

Nope, this was radios from the late 30's. "Modern" superhets, with the
A-range tubes. It was probably top-of-the-line stuff from that area. I will
look thru my NRHF schematics.

73,
Alf Jacob

The UM4 fil is for 12.6V also.
Yes. There were also the 50mA 'V' tubes, believe they were only used in
small <3 tubes sets (Volksempf., Deutscher Kleinempfï¿½nger)

>
> The philips book mentioned earlier shows an application note for

Both tube series were used, but I've seen the '21' series tube set more often
than the single-digit U-tubes with octal base.

I don't have the references handy, but there was an article on these, possibly the Bulletin of the British Vintage Wireless Association? Yes, they were used outside of Germany, in the UK and US at least, though not extensively.

Siemens & Halske made the types R and 110, designed by Schottky, according to a table in Siemens Zeitschrift, 1922, p.290.

73, Alan

Gary,

What is the year for the rig ? Also curious about receiver sensitivity
on 2mtrs and 432.

Thanks,
Vic WA2JIW

As nearly as I recall, early 90's, and sensitivity spec is:

SSB = .2 uv for 10db(S+N)N
FM = 1 uv for 30 db (S+N)N
.2 uv for 1.2 db SINAD
Apparently, the spec is same for both 2 and 432

I have forsale a Drake TR-4 with the 34pnb noise blanker.front panel looks like a tr-4c with the n.b. switch,also have the RV-4 remote vfo and the AC-4 power supply.this is a very nice looking station with some small scratches on cases.radio works well 80-10 meters with 150w's output.I also have the original manual for the TR-4/34pnb.I am asking $350 picked up in Phila. shipping would probably be about $40 u.p.s. John w3ayt@arrl.net

3995. F.S. Drake T4X/R4A/AC4/MS4

I have forsale a complete Drake station consisting of a T4X,R4A,MS4 & AC4
power supply.I also have the original manuals and inter-connect cables.this
is a nice looking station all but for some cutouts on the bottom cases near
rear where the previous owner had rca and bnc jacks so he could run
inverters and transverters. I have since removed and restored to original
electrical condition. I have also removed front panels ,knobs and cleaned
the vfo dials.they do look nice. I am asking $350 picked up in Phila. also
when radios are next to each other on table you cannot see the cutouts,I do
understand Drake still has bottom cases available. John w3ayt@arrl.net
also, I may but shipping would probably run about $50 u.p.s.

Normally, yes, but the UY1(N), UCH4, UBL1 and so on, have OCTAL bases.
Normally, the 30 series (EF39 etc) have octal.
Then another exception: The battery '21' valves (DK21 etc) have octal bases..
Always there is an exception to the rules..

The orientation pin is just part of the plug. The true seal is futher
inside. The crystal is sealed in a glass envelope. Cracks or breaks in
the bakelite plug are not critical.

John

John,

You can get the schematic, copy, and alignment instructions from Alton H. Bowman, 4172 East Ave., Canandigua Ny., 14424. The cost is $6 and $13 for the schematic only and a complete copy of the manual respectively. Some large manuals will me more, e.g. Heath TX-1 Apache. I have delt with him for years. Feel free to mention I referred him to you. You should send a pictorial of the chassis showing the valve (tube), transformers, cans, tuning condenser, etc. This will greatly help him in getting the schematic out to you. Feel free to tell others about him.

I have a Breting 12. It is beautiful inside and out. I STRONGLY suggest replacing the condensers and resistors. The wax should be the Sprague Orange Drops, old mics replaced with new silvered micas, electrolytics with Sprague Atoms or another can, the smaller resistors to 1 and 2W flameproof, the higher power resistors with Ohmite types. The use of 1W resistors does make a difference in the amount of noise, less noise. The coupling condensers in the audio should be raised in value to give better fidelity, this includes the cathode bypass on the output (about 500mfd 25V). If you need any help with getting the parts or restoration tips, email me at vincentelectronics@erols.com. There is nothing like making a nonworking radio cleaned and restored working great. Be sure to clean the chassis and valves. Ammonia is the best to clean chassis and valves.

From: speedskater1@my-deja.com
Subject: Another sell then advertise

I had called about a Collins 20V that was for sale in NC. The guy admitted he sold it long before he sent in the ad. What is the point of selling something THEN sending in an ad advertising it for sale? The only thing I can think of is that the seller wants the attention of people contacting him. If someone does this I will never believe the seller again assuming the item is long gone. False advertising is not a way to generate customers. A bad experience can be spread to many as a warning not to use a seller. I have seen many different items I am interested in buying advertised only to find out it was sold long before it was advertised. A WTB seems to be the best way to go. At least you know the item is there. I know I am not the only one that has ever had this experience. A friend has had this happen to him several times in the past.

From: jvercellino@sprynet.COM (John Vercellino)
Subject: AR-3 tube lineup

The tube next to the variable capacitor is the 12BE6. Right in front of it (looking from the back) is the 5Y3. To the right of the 5Y3 is a 12BA6. Next to that is the 12AV6. The rightmost tube is the 12A6 or 12V6. Hope this helps.

Dick, by the way, I tried to respond directly to your e-mail address and the message bounced. Please contact me directly.

Subject: Eddystone 750 schematic

Hi Munoz

You can get excellent copies of all Eddystone manuals from the Eddystone User Group in the UK. They ask ?10 each, though. I can let you have an email address for them if you are interested, but would suggest you are less terse as they are English.

Regards

Simon

Are you sure that you wired in those replacement capacitors correctly...?
Being off by one lug on a terminal strip or one pin on a tube socket would
make a significant difference.

If it were me, I would probably start in the IF chain, where you probably
replaced a paper capacitor that was in this circuit, one that's responsible
for setting up the selectivity skirt(s)... if you don't have a schematic for
the receiver, you're going to need one for this job... good luck.

C.K.

From:
Subject: Help with Hammarlund HQ-170

Sounds like either a problem with the slot and the 60 kcs IF alignment.
Make sure you use a good
sig generator (even with a URM-25D its hard). Frank Lester (the father of
the HQ170) told me aligning the IFs
is a must. In his notes he also mentions a BFO problem that occurs if one
of the IFs is out. He suggests going thru the entire alignment again. I
had the opposite problem in that mine sounds great on 3.0 and 2.0 khz but
the sigs drop off 20 DB when I switch to ,5 or 1.0 khz.

Subject: Info Req: Very Old German Tubes

Herbert

you seem to have some interesting sources of information!
Have you ever seen any applications for RV2,4P45 and DAH50, believe
they are almost the same type of valve (Raumladegitter - gibt es ein
�bersetzung?),

DAH50 is mentioned in the Philips book(anno 1940), and an application
for simple battery operated receiver is shown, but I am not aware if
this type of valve has been used in commercial receivers

Prewar German consumer radios are becoming more and more collectible,
especially in the USA. I've been collecting them for a few years now and am
gratified to find more and more of them coming up from sources in Germany
and throughout Europe. They are generally top flight construction,
especially sets made from 1935 onwards!

Normally, yes, but the UY1(N), UCH4, UBL1 and so on, have OCTAL bases.
Normally, the 30 series (EF39 etc) have octal.
Then another exception: The battery '21' valves (DK21 etc) have octal bases..
Always there is an exception to the rules..

Subject: Modifications for the Heath HL-2200

Hi,
It is 99% same as SB221, same transformer, RF circuit parts, etc. The
only difference is the cabinet and addition of a stand by switch. It is
a good amp but it could be modified better. See AG6K mod. on old QST.
Good luck.

Date: Thu, 09 Mar 2000 17:41:31 -0500
From: Tim & Cathy
Subject: TS 440 ANT TUNER FIX

The automatic antenna tuner in my Kenwood TS 440S became erratic and would not tune my antenna on any band. The servo motors would continuously hunt and the swr remained >6:1.

The source of the problem was the change over relay, RL1, in the auto tuner. The MATSUSHITA DS2-M relay had burnt contacts. This relay has a clear case and once the tuner was removed from the transceiver, the problem was apparent.

I ordered a replacement relay (P/N S51-2417-05) from a Kenwood parts vendor and received an OMRON G6-234P. This relay is a direct replacement for the MATSUSHITA relay.

Replacing the relay corrected the erratic operation of the tuner.

I hope this info will help anyone experiencing a similar problem with their TS 440S

From: Larry Menzel <retire@rconnect.com>
Message-ID: <sci7vlfibi7118@corp.supernews.com>
Source record: 69822

Need a copy of the WM2000 watt meter schmatic. I got one in a trade, with no documentation. The meter needs calibration but there are too many pots to start tweaking without knowing which is the one I want.

Altenately, if you know which pots to adjust, that would be fine too. Happy to reimburse for copy/postage cost.

Yes, DJ2VN, I found the info in "Technical Topics Scrapbook 1990-1994" which had some further info from Dick Rollema PA0SE who built a radio using two DAH50s in 1940 which was published in the Dutch magazine "Radio-Express". He also mentions building radios using the A441. There is also a simplified circuit for a 2-terminal oscillator using the A221 space-charge-grid pentode.

Source record: 69825

I have a mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. NOTE: Please REMOVE the "02" to leave "worley" to reply or call 334-347-5281 day/eve.

I am having serious probs with my new (old) Drake transmitter. I put it online abt 1 week ago, and its output has gradually faded from abt 50 watts (as measured on my MFJ 941E transmatch) to almost NONE!!! What could be wrong? Are my finals kaput? This seems to have been a gradual problem, but today when I fired 'er up, almost no output at all. Please help!

THOROUGHLY screwed up last post - trying to get it right

I bought a new IC-746, which includes 2 meters, so have an excellent
Kenwood TS-780 dual-band multimode transceiver available. It's 10 watts
on 2
or 432, SSB,CW or FM, digital display. It's in perfect physical and
operating condition,
comes with hand mic, original box (I think) and operating manual. I am
the
original owner. This is a base station rig with its own built-in AC
supply, and is about the same size as a TS-450. Its been a great rig,
but something better came along...

Price is $400 - reply via Email

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

I own one since 1982, MKIII . It is a great rig, a poor man's Collins.

The noise blanker is the best I have ever operated, Processor is true RF.

Width control with 2 cristal filters, allways cascaded.

Notch is audio only

I have bought ALL the booklets from fox tango, but never needed to modify anything.

I have the whole line, scope, L.A., speaker, transverter, and 3 VFO!! FM, and even the 12V power supply.

The antena coupler FC901 is a joy!.

Japanese have a higher pitched voice than caucasians, so I would only recomend to use a good microphone, like shure 444 (have one) but I use it with a Heil mike. I have a CW filter too

The MKIII has a known problem, the contacts in the relay in the clarifier, that is the reason why I have 2 external digital VFO (just in case) I have another analog external VFO with same drift problem.

So if you manage to take hand on a digital VFO, you will have a wonderfull rig, specially in the low bands, because of the tuned circuits.

After the FT101 MKIII I bought a FT-ONE and a FT-980, but I still use the 101

I have aligned some 10 FT101ZD, and ALL gained a lot, about 10dB in gain, by the way the S-meter is VERY well calibrated, you can check it with the attenuator.

The 12BY7A has to be of the best quality you can get, I have best experience with NEC tubes. Next G.E. tubes, but some G.E. had too much gain and had a tendency to oscillate (but like a Bronco excellent when adjusted), most of the cheap tubes did not have a clear "hump" when the preselector was tuned.

Finals last a lot, (I still have the originals) but the 12BY7A burns out, so keep some on hand. An old tube will produce a lousy "hump" when the preselector is tuned in "tune" position.

Yes, DJ2VN, I found the info in "Technical Topics Scrapbook 1990-1994" which
had some further info from Dick Rollema PA0SE who built a radio using two

DAH50s in 1940 which was published in the Dutch magazine "Radio-Express". He also mentions building radios using the A441. There is also a simplified circuit for a 2-terminal oscillator using the A221 space-charge-grid pentode.

From: "Lane Ku7i"
Subject: Modified SB-220 $625 shipped

This is a real workhorse of an amp. Recent procurement of a homebrew 4CX1500 amp forces the sale of this gem.

Modifed with the following:

1. Change of tuning dials from 1:1 to 6:1 reduction with vernier drives.
2. Back to back meter protect diodes.
3. Power supply diodes, bypass capacitors and equilizing resistors have been replaced.
4. Placed diode accross main T/R relay to increase relay life.
5. Placed 200 ohm dropping resistor in series with relay to protect contacts.
6. New T/R relay.
7. VHF parasitic suppressors installed on both the tube anode side and the cathode side.
8. Installed HV fuse resistor to replace choke in HV line.
9. Grid fuse protection using Rich's (AG6K) resistors and capacitors.
10. Cooling fan rebuilt. This baby is QUIET and moves a LOT of air.

I have notes on all of these mods as well as the published info that AG6K includes with his kits. This amp works better than new. The ONLY reason I am selling this is because of the new HB amp I just picked up. I will also include a copy of how to add 160 meters using AG6K's method. Not difficult to do.

The plate voltage on this amp idles at about 3100 and fully loaded at 1300 watts out drops to about 2600 or so. You can wire the amp for 120 or 240 but I recommend 240. Cosmetics are really nice, about an 8 to 8.5 out of 10. There was a Drake low pass filter bolted to the top of the case and as a result there are four non-original holes in the top of the cabinet.

This amp covers 80 to 10 including WARC. About 100 watts of drive for 1250 to 1300 out on 80 to 17 and a little less on 15, 12, and 10 meters. There are not seperte band switch positions for 17 and 12. Use the 15 and 10 meter band switch postions for those two bands. Use your auto-tuner is driving it with a solid state rig (on 17 and 12).

Have original manual and copies of all of the mods. The amp works PERFECT. Tubes are Eimac and of course full output.

Price is $625 shipped lower 48.

I have to put up with wall-to-wall right-wing dickheads on the radio, not on a newsgroup! Only members of the aforementioned dickhead group, supporters of the party that takes in twice the money that the Dems do, would have the temerity to use fund raising to beat up the Dems. Your party and your pols are, and always have been, the party that advances the interests of rich people as against the poor and middle class, and The Repubs reward them handsomely and continuously for their loyalty.

You know the particularly extreme examples as well as I do. Everyone does.

So put a sock in it!

Date: Sat, 4 Mar 2000 09:52:04 -0800 (PST)
From: radiomuseum@webtv.net
Subject: QUESTIONS: Johnson Desk KW - Bias & Screen Mods?

Hi all,
I'm in the final stage of a Johnson Desk KW restoration - (that is,
getting it to work correctly!) SN is 100280, so it is about the middle
of the production of the 402 (or so) desks. The bias resistor network
and the screen regulator chassis differs from my schematic/manual, which
is dated 1959. The bias network has eliminated R214 & R215 and has
changed the value of R208 from 100 ohms to 3K ohms. There are also
changes to the wiring of the pots for adjusting bias and screen current.
It is obvious that these are amateur changes because of the splices in
the harness that are covered with electrical tape. IS anyone aware of a
published mod (Johnson or not) that involved the bias network?
ALSO, the screen regulator chassis sould have a closed-circuit jack to
allow screen current measurements. My reg. chassis has a binding post
and ground connectors, which would suggest that screen voltage would be
measured rather than current. HAS anyone seen this as a mod or is this a
Johnson upgrade that didn't make it into the manual?
THANKS in advance for any information. E-mail or post okay.

4063. FS 4-400A tubes 2 Eimac, 1-Penta

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-11 00:00:00 UTC
From: Ed Carpenter <k4gj@citrus.infi.net>
Message-ID: <8ae4drlar1@nw003t.infi.net>
Source record: 69867

Total of(3) 4-400A Tubes for sale. The Eimacs were part of an unfinished amp(estate) and the PL was packed in an old box.
The Eimacs show a bright red lettering usually denoting little, or no usage. The PL is marked in yellow that has not darkened.
Filaments check continuity, but I have no way to test them in an RF situation.
Guaranteed to be usable, if you can convince me that you can test them properly.
$135 for all three, shipped CONUS or USA zip code.
Tnx for reading, 73- Ed K4GJ

4070. TRADE my JOHNSON500 for ur Ranger or Valiant

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-11 00:00:00 UTC
From: jimmoci@aol.com
Message-ID: <20000311161955.21798.00000224@ng-co1.aol.com>
Source record: 69874

Before I put this thing up on Ebay I wanted to see what I could get in trade for it. I have a Johnson 500 RF deck. No power supply/modulator. It has some scratces on the front, and around the corners. The Cabinet has been glass beaded and powder coated with a very tough wrinkle finish and is ready to be sprayed in Johnson Maroon. The inside is in nice shape and appears totally stock. I always intended to rewire my 4-400 modulator/power supply and make an overkill AM rig out of it but I just have too many projects and not enough time. I am looking for something I can plug and play that is exceptionally clean. I would prefer a Ranger, Valiant, Collins 32V, B&W 5100 or other super clean Plate modulated transmitter. I am also looking for a KWM2 or 2A. You guys know what this thing is worth and I know what other clean boatanchor rigs are going for (alot) so lets not insult each other. I will be entertaining offers till next weekend. If nothing catches my fancy it will be available on it @ ebay.com
Tnx,
Jim

4078. SX-111 "Mystery Tube"

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-11 00:00:00 UTC
From: Mark Bell <bellfamily@supernet.com>
Message-ID: <38cacb14@news.desupernet.net>
Source record: 69882

Folks --

About a year ago I did a clean up of my SX-111 which had set idle for more than 10 years, and it's working fine.

A rather large hamfest is coming up in a few weeks, and I wanted to replace the remaining "Sprague Black Beauty" caps in the unit. After carefully examing the SX-111 and comparing it against the manual I downloaded from BAMA, I've found I have an additional tube in my receiver!!

The "mystery" tube on my chassis is a 6BY6, and it's located at the back of the chassis where (according to my manual) C69 should be (C69 is the multi-stage can cap). In my receiver, C69 is located on the underside of the chassis directly over V7(5Y3GT). The wiring, socket, etc for my "mystery" tube looks to be original. The C69 cap itself is a replacement, but the wiring to it looks original. I doubt C69 was originally at the location of my "mystery tube" as the aperature would have to be bigger, and the chassis metal is not patched.

I suspect there may be different versions of the SX-111, and this is alluded to in the HCA product database. I also suspect the manual I download is for a version of the SX-111 different than mine. I've been unable to find any further detailed references to different versions of the SX-111.

Any help will be very appreciated.

I can supply you with a copy of all S/line bulletins including the KWM-2
and 51S-1
for $40 which includes shipping. The book is xerox copies and is about 1
inch thick.

You can also get a compendium from Electric Radio for $49.00
Theirs is loose leaf, mine is metal bound so it lays flat.
Let me know if you are interested. I have 6 available so no hurry.

Hi,
The newer version of SX111 has a product detector using 6BY6. Your receiver is a newer one. You can ask around to get the manual for newer version. I think newer one sounds better on SSB, you are the lucky owner. Good luck.

From: k6hm <k6hm@wenet.net>
Message-ID: <38CB0D5A.99F06DA2@wenet.net>
Source record: 69891

You can use PL-68 which is used on Collins S line and KWM2's. This PL-68 is probably easier to get.
Good luck.

Thanks Young --

I did some additional searching today, but didn't come up with anything on the web. I rechecked the serial number papers attached to the SX-111, but didn't see anything. It was only after I had slid the chassis back into the cabinet that I noticed the (small) tube diagram on the inside cabinet side. I took a look at it and it does say Mark I !! I didn't know until today that there were different models of the 111. Based upon your comments, I assume the original was just the SX-111, and the later version was the Mark I (as opposed to the original being the Mark I and the later the Mark II).

Thanks again...

BTW, if any of you readers have the updated manual, please let me know. Of immediate interest is the value of the two molded paper caps attached to pins 2 and 6 of the 6BY6, I'd like know them. I believe they're 0.22uF and 0.18 uF, but the colors are rather faded.

Mark K3ZX

4089. 12BY7A vs 7054

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-11 00:00:00 UTC
From: no@telocre.as
Message-ID: <38CAC409.728C@telocre.as>
Source record: 69893

I have bought recently in Ebay a couple of 7054's. They said they are industrial equivalent of the 12BY7A, but I am not sure, and I dont have any mean to check it.

Disregarding performance of the tubes, I dont know if they are pin compatible, they look rather much alike from the outside, but the price ratio is 1:4 so maybe they are not so much equivalent after all.

Any help????

Please post, fake Email is anti spam

4094. Atlas 350XL parts/info

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-12 00:00:00 UTC
From: dslosty@pipeline.com
Message-ID: <38cc2483.1936429@news.pipeline.com>
Source record: 69698

Any Atlas 350XL experts out there?
Just got one that didn't transmit or receive.
Got the receive working fairly well but can't get much signal gain
thru the IF circuits on transmit. So far, I haven't been able to
'scope out a failed component or stage, just the fact that
overall gain seems to be down.

I suspect a problem in my PC120C first mixer/balanced modulator PCB.
My unit is an early one and the pcb is full of rather crude factory
modifications. It seems like the later units had the PC-150 circuit
board installed for the same functions.

Any spare PC-120 or PC-150 circuit boards out there?
Other spares available?

Anyone have a listing of original factory mods to this rig?

From the looks of my manual and the rig it seems like
Atlas never stopped modifying this rig with many design
changes occurring until the end of production.
Am I right?

Tnx/73

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have a VERY nice looking HQ-145-A rcvr. Fully functional 10mhz and below. Above 10 mhz, when the second I.F. kicks in the rcvr sensitivity is low. Cosmetics of the front panel are excellent, an easy 8 to 8.5 out of 10. Have good copy of manual with schematics. The top of the cabinet has had some holes drilled into it (grrrrr!!!) for access to the I.F. transformers. Other than that the cabinet is real clean.

Sell in as-is condx for $105 shipped lower 48.

Also have a Heathkit 2036 2 meter mobile rig with the matching supply. The supply needs a new 12 volt regulator. When the supply went out it took the radio out too so it does not work. have all the manuals and the touch tone mic. This is the popular 2 meter mobile rig from the 70s with the thumbwheel switches on the front for freq selection. Has +/- 600 khz or simplex modes. FM only. normally rated at 10 watts out.

$30 shipped lower 48.

4124. TRADE my Johnson500 4 ur Ranger,Valiant,32V,etc

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-12 00:00:00 UTC
From: jimmoci@aol.com
Message-ID: <20000312073620.03454.00000482@ng-ck1.aol.com>
Source record: 69765

Before I put this thing up on Ebay I wanted to see what I could get in trade for it. I have a Johnson 500 RF deck. No power supply/modulator. It has some scratces on the front, and around the corners. The Cabinet has been glass beaded and powder coated with a very tough wrinkle finish and is ready to be sprayed in Johnson Maroon. The inside is in nice shape and appears totally stock. I always intended to rewire my 4-400 modulator/power supply and make an overkill AM rig out of it but I just have too many projects and not enough time. I am looking for something I can plug and play that is exceptionally clean. I would prefer a Ranger, Valiant, Collins 32V, B&W 5100 or other super clean Plate modulated transmitter. I am also looking for a KWM2 or 2A. You guys know what this thing is worth and I know what other clean boatanchor rigs are going for (alot) so lets not insult each other. I will be entertaining offers till next weekend. If nothing catches my fancy it will be available on ebay.com

Tnx,
Jim

P.S. For those who are not familiar with this transmitter it is a 4-400 transmitter with an 811A modulator. Johnson did not make many of these and they are pretty scarce. The power supply/modulator was a seprate unit that sat on the floor. Many power supplies did not make it thru the years (including this one) and alot of hams would build their own that exceeded the specs of the Johnson original. There are a few of these rigs on 75 and 40 meter AM and they sound great. In stock form they are 500 watts input (approx 375 out) and with a beefier supply/modulator they will do more. I have had a few emails asking me the value of the unit. The last few that I have seen sell on the net have gone for $1400 and $1500. These were complete units. I feel this one is probably worth about $750 in its current state. The deck is working and has been tested on another hams working PS/Modulator. It is in average shape and is fully restorable and it comes with the original manual.
Tnx for reading, Jim

I have finally received the M54826P frequency counter chips for the DX-302's.
If you are in need of a chip to restore you receiver to a working condition the
cost is $15 shipped CONUS. I have a limited number available so e-mail direct
if you would like to purchase one of these chips.

Source record: 69768

I have suggestions:

1) Check first that the replaced caps were soldered to the correct points. I have made many a mistake in replacing bad components.

2) At or around each solder point you made, make sure that you did not affect an adjacent connection (excess solder etc.)

This is not a reflection on you ability- I have been restoring equipment for decades and still make these types of mistakes!

The orientation pin is just part of the plug. The true seal is futher
inside. The crystal is sealed in a glass envelope. Cracks or breaks in

the bakelite plug are not critical.

Subject: Collins KWM-2 SB's Needed

I can supply you with a copy of all S/line bulletins including the KWM-2
and 51S-1
for $40 which includes shipping. The book is xerox copies and is about 1
inch thick.

You can also get a compendium from Electric Radio for $49.00
Theirs is loose leaf, mine is metal bound so it lays flat.
Let me know if you are interested. I have 6 available so no hurry.

You can use PL-68 which is used on Collins S line and KWM2's. This PL-68 is
probably easier to get.
Good luck.

From: "Gary - KJ6Q"
Subject: FS - TS-780 2 meter, 432 multimode...

As nearly as I recall, early 90's, and sensitivity spec is:

SSB = .2 uv for 10db(S+N)N
FM = 1 uv for 30 db (S+N)N
.2 uv for 1.2 db SINAD
Apparently, the spec is same for both 2 and 432

From: "Lane Ku7i"
Subject: FS: Hammarlund, Heathkit

I have a VERY nice looking HQ-145-A rcvr. Fully functional 10mhz and below. Above 10 mhz, when the second I.F. kicks in the rcvr sensitivity is low. Cosmetics of the front panel are excellent, an easy 8 to 8.5 out of 10. Have good copy of manual with schematics. The top of the cabinet has had some holes drilled into it (grrrrr!!!) for access to the I.F. transformers. Other than that the cabinet is real clean.

Sell in as-is condx for $105 shipped lower 48.

Also have a Heathkit 2036 2 meter mobile rig with the matching supply. The supply needs a new 12 volt regulator. When the supply went out it took the radio out too so it does not work. have all the manuals and the touch tone mic. This is the popular 2 meter mobile rig from the 70s with the thumbwheel switches on the front for freq selection. Has +/- 600 khz or simplex modes. FM only. normally rated at 10 watts out.

$30 shipped lower 48.

>Looks like it is from early 1920s or 30s, just a guess.
>Please responde to Mark
>Worldcyber@aol.com
>
That's a form of Tungar bulb.

The name derives from the use of a Tungsten filament and Argon gas. It's a
low-voltage, high current diode used mostly in battery chargers of the '20s.
Copper-oxide and selenium rectifiers eventually replaced them, but some were
still in use as late as the 1940s.

Might have some value to collectors and restorers.

From: "Mark Bell"
Subject: SX-111 "Mystery Tube"

Folks --

About a year ago I did a clean up of my SX-111 which had set idle for more
than 10 years, and it's working fine.

A rather large hamfest is coming up in a few weeks, and I wanted to replace
the remaining "Sprague Black Beauty" caps in the unit. After carefully
examing the SX-111 and comparing it against the manual I downloaded from
BAMA, I've found I have an additional tube in my receiver!!

The "mystery" tube on my chassis is a 6BY6, and it's located at the back of
the chassis where (according to my manual) C69 should be (C69 is the

multi-stage can cap). In my receiver, C69 is located on the underside of the chassis directly over V7(5Y3GT). The wiring, socket, etc for my "mystery" tube looks to be original. The C69 cap itself is a replacement, but the wiring to it looks original. I doubt C69 was originally at the location of my "mystery tube" as the aperature would have to be bigger, and the chassis metal is not patched.

I suspect there may be different versions of the SX-111, and this is alluded to in the HCA product database. I also suspect the manual I download is for a version of the SX-111 different than mine. I've been unable to find any further detailed references to different versions of the SX-111.

Any help will be very appreciated.

From: "Mark Bell"
Subject: SX-111 "Mystery Tube"

Thanks Young --

I did some additional searching today, but didn't come up with anything on the web. I rechecked the serial number
papers attached to the SX-111, but didn't see anything. It was only after I had slid the chassis back into the cabinet
that I noticed the (small) tube diagram on the inside cabinet side. I took a look at it and it does say Mark I !! I didn't know until
today that there were different models of the 111. Based upon your comments, I assume the original was just the
SX-111, and the later version was the Mark I (as opposed to the original being the Mark I and the later the Mark II).

Thanks again...

BTW, if any of you readers have the updated manual, please let me know. Of immediate interest is the value of the
two molded paper caps attached to pins 2 and 6 of the 6BY6, I'd like know them. I believe they're 0.22uF and
0.18 uF, but the colors are rather faded.

Dont forget the P.A. fan, it was an extra!!!

the 12BY7A is very enclosed, maybe that is why it burns out, I have
never done it, but allways wondered about cooling it in some way.

I allways have the pilot lamps very undervolted, the orange colour is
nicer (I think) the lamps last longer, and the plastic does not burn
out.

I have an Eico, DX-718 space ranger for sale.
This is an entry level receiver for the beginer. Condition is
good and works. All original knobs. Would like to get $30.00
plus some help on the shipping.
Thank you,
Gary

>
> Please post, fake Email is anti spam

THe 7054 is *kind of* equivalent to the 12BY7. The 7054 was a 12BY7, built for 12V mobile use so the filament is different. TThe 12BY7 has a tapped filament which the 7054 *doesn't* have, and the 7054's filament voltage is 13.8 +/- 1.2 V. Also, the 7054 is rated for 5 watts plate dissipation vs 6.5 for the 12BY7.

If your radio has a 12V filament supply vice a 6.3V, it would probably work. If not, guess they're eBay fodder!

Hi,

I have some brand new PD 500 and PD 510 valves in stock. They are all NOS and in original boxes. Mostly Philips and Siemens brand.
These are modern HV regulator valves for colour televisions, and can handle an anode voltage of 25 - 30KV. Max anode dissipation is 30 - 40W. Magnoval (B9D) base. An approximate US equivalent should be 6BK4

E-mail me if interested.

Regards,

Arnold Goksyr

Would anyone be able to help me with a manual for a Regency HR-212 rockbound 2m rig? I inherited one, sort of, and would like to get it working. Best info is that it was working when pulled in the early '80's.

I'd be happy with a photocopy of the operating manual, although someday I'll be wanting the maintenance manual too, probably. I'll pay for copy and mail costs.

It would help if you'd reply by e-mail rather than I post. All help greatly appreciated.

TIA and 73 de N9QQB

Source record: 69648

(2) for sale- 4000 VAC with a center tap- 2.1 amps CCS, 175lbs, see pic @ http://members.aol.com/jimmoci/trans.jpg Yes,thats a 3-500Z as a reference for size in the pic. These transformers are very big and have alot of duty cycle. They are removed from 5KW HF Jammers used by the military. They have multiple taps from 208VAC to 240VAC so voltage can be changed + or - a couple hundred volts to suit your needs. It also has a center tap. $250 each. They weigh 175lbs each so pick up near Philly is required. I will be at he Trenton/DVRA Hamfest and the Baltimore/Timonium Hamfest so I can meet someone there with them also.
Thanks for looking,
Jim

4169. HP-412A test leads NEEDED

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-13 00:00:00 UTC
From: Mike de Wey <wb6vse@ipa.net>
Message-ID: <8ak42k$h8b$1@news.ipa.net>
Source record: 69660

Hi to the list,
Is anyone parting out, or have a junker HP-412A VTVM? I need all three of the test leads and probes. The originals used shielded wire, and have been cut off. Meter seems OK, so I would like to complete it.

Thanks for reading.

Mike/K5VSE

4170. Heathkit AR-3 help needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-13 00:00:00 UTC
From: D&N <allenmapsons@99main.com>
Message-ID: <scr5hg5ta5n143@corp.supernews.com>
Source record: 69661

I can't locate a schematic for the Heathkit AR-3, either on the net, or at our museum archive. I have one for the AR-2. The labels are missing on the back of the AR-3 chassis, so I need to know the purpose of two connections. Just to the right of the power cord, as you look at the rear of the chassis, is a small, porcelain insulated jack. Between that and the noise limiter switch is what looks like a tube socket. I had a working AR-3 several months ago and I don't recall seeing that socket on the back of the chassis. There is a headphone jack to the right of the noise limiter switch. Can anyone identify the purpose of the porcelain insulated jack and that other socket? Also, which is the normal position for the limiter switch, up or down ? Am I correct , that the selector switch should be in the "phone" position for normal operation? I have bridged a temporary set of filter caps and disconnected the original filter can. I'm getting lots of noise but am not able to get any stations. Any help would be appreciated.
Thanks,
Dick

4171. National HFS Receiver

The 6BE6 and 6BY6 have the same grid setup, but the "signal grid" (pin 7) on the 6BE6 has a remote cutoff characterstic. The 6BY6 has a sharp cutoff "signal grid." The 6BE6 is the prefered tube when AVC is applied to the signal grid. That is why the 6BE6 is prefered in receiver mixer circuits. In product detector circuits, AVC is not involved so the sharp-cutoff 6BY6 works best. The fact that the 6BE6 is a much more popular tube may be the reason it was used in the later Drake models. The 6BE6 has no operational advantage over the 6BY6 in a product detector circuit, it is just much easier to find.

Source record: 69714

Pinouts are similar, except that 12BY7 has pin 6 as a filament center tap so it can be used on 6.3 volts, too. My GE tube book shows the 7054 as an RF Pentode with a 9GT socket, 13.5 v @ .275 A. filament, absolute max values of: 5 watts plate dissipation; 330 plate volts; 180 screen supply volts @ 1/2 watt; In a Class A amplifier, typical values would be: 250 v.@ 19ma plate, 150 v.@ 3.5ma screen, Rk=120, Rp approx. 100,000, Gm= 11,500 microMHOs. Input, output and grid-plate capacitances are the same as the 12BY7, but the BY7 has sharp cutoff characteristics not shown for the 7054. Using it in a circuit designed for a 12BY7 would probably give you disappointing results. But hey, when I was a kid....

Moggy has the simplest way. Check your current needs, if an off the
shelf won't work, find a commercial electrical supply and they will have
them in the few hundred watts to several KW range.

.
will handle the load..hope this helps.Gene

> Thanks much

Andy, you just need a 'bucking' transformer. Figure the load current,
and what drop you need, then get a 'filament' transformer of that
rating and hook it up to buck the line voltage. For example, lets say
the line is 125V and the load is a radio taking 1.5A. You need to drop
15V at 1.5A, so get a 12 to 15v at 2A transformer. Connect the primary
across the line in the usual manner, and connect the secondary in
series with the line to the set. You must correctly 'phase' the
secondary so it subtracts from the line voltage. Simply connect it up
and measure the output. If it is 140V it is phased wrong. Reverse the
two secondary leads and you should see 110V.
There are more tricks you can do to fine tune it, but this is the
basics.

THe 7054 is *kind of* equivalent to the 12BY7. The 7054 was a 12BY7, built
for 12V mobile use so the filament is different. TThe 12BY7 has a tapped
filament which the 7054 *doesn't* have, and the 7054's filament voltage is
13.8 +/- 1.2 V. Also, the 7054 is rated for 5 watts plate dissipation vs
6.5 for the 12BY7.

If your radio has a 12V filament supply vice a 6.3V, it would probably work.
If not, guess they're eBay fodder!

Subject: Atlas 350XL parts/info

Any Atlas 350XL experts out there?
Just got one that didn't transmit or receive.
Got the receive working fairly well but can't get much signal gain
thru the IF circuits on transmit. So far, I haven't been able to
'scope out a failed component or stage, just the fact that
overall gain seems to be down.

I suspect a problem in my PC120C first mixer/balanced modulator PCB.
My unit is an early one and the pcb is full of rather crude factory
modifications. It seems like the later units had the PC-150 circuit
board installed for the same functions.

Any spare PC-120 or PC-150 circuit boards out there?
Other spares available?

Anyone have a listing of original factory mods to this rig?

Subject: Collins KWM-2 SB's Needed

I have a very early KWM-2A which has had NONE of the service bulletins
complied with. I'm trying to find a location on the web where I can
find these to download but with no luck. The obvious places like CCA
don't have them. Any suggestions?

Thanks

From: no@telocre.as
Subject: FT-101ZD mods?

I own one since 1982, MKIII . It is a great rig, a poor man's Collins.

The noise blanker is the best I have ever operated, Processor is true RF.

Width control with 2 cristal filters, allways cascaded.

Notch is audio only

I have bought ALL the booklets from fox tango, but never needed to modify anything.

I have the whole line, scope, L.A., speaker, transverter, and 3 VFO!! FM, and even the 12V power supply.

The antena coupler FC901 is a joy!.

Japanese have a higher pitched voice than caucasians, so I would only recomend to use a good microphone, like shure 444 (have one) but I use it with a Heil mike. I have a CW filter too

The MKIII has a known problem, the contacts in the relay in the clarifier, that is the reason why I have 2 external digital VFO (just in case) I have another analog external VFO with same drift problem.

So if you manage to take hand on a digital VFO, you will have a wonderfull rig, specially in the low bands, because of the tuned circuits.

After the FT101 MKIII I bought a FT-ONE and a FT-980, but I still use the 101

I have aligned some 10 FT101ZD, and ALL gained a lot, about 10dB in gain, by the way the S-meter is VERY well calibrated, you can check it with the attenuator.

The 12BY7A has to be of the best quality you can get, I have best experience with NEC tubes. Next G.E. tubes, but some G.E. had too much gain and had a tendency to oscillate (but like a Bronco excellent when adjusted), most of the cheap tubes did not have a clear "hump" when the

preselector was tuned.

Finals last a lot, (I still have the originals) but the 12BY7A burns
out, so keep some on hand. An old tube will produce a lousy "hump" when
the preselector is tuned in "tune" position.

Subject: FT-101ZD mods?

Dont forget the P.A. fan, it was an extra!!!

the 12BY7A is very enclosed, maybe that is why it burns out, I have
never done it, but allways wondered about cooling it in some way.

I allways have the pilot lamps very undervolted, the orange colour is
nicer (I think) the lamps last longer, and the plastic does not burn
out.

Subject: Help with Hammarlund HQ-170

I have suggestions:

1) Check first that the replaced caps were soldered to the correct points. I have made many a mistake in replacing bad components.

2) At or around each solder point you made, make sure that you did not affect an adjacent connection (excess solder etc.)

This is not a reflection on you ability- I have been restoring equipment for decades and still make these types of mistakes!

From: David Stinson
Subject: More Immorality in High Places

What's going on? Against all odds - and despite the best efforts of the Clinton-Gore Justice Department - Al Gore's friend and campaign cash collector Maria Hsia (pronounced: "Shaw") was convicted on Thursday of all five felony counts stemming from her and Gore's 1996 campaign fundraiser at the Hsi Lai ("She - Lie") Buddhist Temple in Los Angeles.
Networks take a nap. But the three network evening news shows - with an entire afternoon to prepare - failed miserably to uphold their basic obligations to inform the American public of this scathing story about the vice president. On ABC's "World News Tonight," Peter Jennings spent just 19 seconds on the story. On CBS, anchor Dan Rather gave the story a total of 23 seconds. And worst of all, Tom Brokaw didn't even utter a single word about Gore and his convicted crony.
On top of that, the Senate Government Affairs Committee had identified Hsia as "an agent of the Chinese government" and even Democrat Senator John Glenn's highly partisan report had called her a "consultant" to "Chinese government officials."
Imagine if a close associate of a Republican presidential candidate was branded an agent of a politically volatile government and then convicted of funneling illegal campaign cash to that candidate! Is there any doubt this story would have led every nightly news show?
Protest. Let the networks know there is a quiet majority who cares about their democracy being put up for sale in a place of worship - all for the sake of a brazen and illegal scheme to launder campaign cash through impoverished monks and nuns. Please send a message to the three networks - their e-mails, phone and fax numbers are at the bottom. Won't you please

forward this e-mail to friends? Also, call radio talk shows and write
letters to the editor of your local newspapers. We must talk this up in
Internet chat rooms - and around every water cooler, lunchroom,
classroom
and union hall across America.

Shareholder meetings. General Electric owns NBC, Westinghouse owns CBS
and
Disney owns ABC. If you own stock in these companies, why not find out
when
their shareholder meeting are - and make your voice heard?

Date: Sun, 05 Mar 2000 23:02:01 GMT
From: "Lane Ku7i"
Subject: price reduced SB-220

AG6K modified SB-220. Full output. Now reduced to $585 shipped lower 48.
Will take an HQ-170-A, HQ-180, or 51J-4 in partial trade.

Real performer of an amp. Recent procurement of a homebrew 4cx1500B amp
forces sale of this gem.

Modified with the following:

1. Change of tuning dials from 1:1 to 6:1 reduction drives.
2. Back to back meter protect diodes.
3. Power supply diodes, bypass caps and equilizing resistors replaced.
4. Placed diode accross NEW T/R relay to increase relay life.
5. Installed 200ohm dropping resistor in series with relay coil.
6. VHF parasitic suppressors installed.
7. HV fuse resistor installed to replace the old HV choke.
8. Grid fuse protection using AG6K's resistors and caps.
9. Cooling fan rebuilt. Now very quiet and moves LOTS of air.

Have data and notes on all of the mods that were made. Plate voltage at idle
is 3100 and drops to 2600 fully loaded with 1300 watts out. Full out on
80-40-20 and slightly less on 17-15-12-10. Use auto-tuner with solid state
rigs if using the amp on 17 and 12. Use the 15 and 10 meter bands
respectively.

This is a factory modified SB-221 (SB-220 bandswitch and tuned input). No
difference than an SB-220 except the front panel reads "SB-221" and the 10
meter band switch position is not labeled.

PERFECT operating condx. Amp will be double boxed and shipped seperately
from the tubes which are Eiamc and will also be double boxed. Both items
will travel UPS ground and be insured appropriately.

$585 shipped lower 48. Take HQ-170-A, HQ-180, or 51J-4 in partial trade.

The 6BE6 and 6BY6 have the same grid setup, but the "signal grid" (pin
7) on the 6BE6 has a remote cutoff characterstic. The 6BY6 has a sharp
cutoff "signal grid." The 6BE6 is the prefered tube when AVC is applied
to the signal grid. That is why the 6BE6 is prefered in receiver mixer
circuits. In product detector circuits, AVC is not involved so the
sharp-cutoff 6BY6 works best. The fact that the 6BE6 is a much more
popular tube may be the reason it was used in the later Drake models.
The 6BE6 has no operational advantage over the 6BY6 in a product
detector circuit, it is just much easier to find.

TUBES AVAILABLE

I currently have over 300,000 tubes in stock. Have a good selection of both
new and used/tested tubes for audio, CB & HAM radio, TV, CRT use.
Sorry I do not have a Web Site nor a price list. Suggest that you Email or
Fax me with the tubes that you are looking for along with the quantify of each
needed. I will check my inventory and advise you of current availability and
cost.
In addition, I also have a very good selection of tube testers, tube caddies
and good used CB/HAM equipment. Please contact me regarding your needs.
Thank you for your consideration.

From: "Nico van Dongen" <nico.vandongen@compaq.com>
Subject: BC-652/BC-653 WWII radio installation

I'm placing this entry for an English friend who is not on the Internet.
He has a BC-652/653 radio installation for sale or swap. It is a WWII
vehicle set 1.5 to 6MHz and it is doing around 50Watt AM now.
Originally it is on a 12 volt 30 Amp power supply but some 15 years ago I
changed it to a 220 volt AC power supply and added a additional modulator
stage. All additional components are build in the original dynamotor power
supply frame and the set appears to be 100% original form the outside except
from the fact that the set now works in silence instead of with the noise of
4 vacuum cleaners working together. All changes are documented.

I made a swap deal on this set with him some time ago but he wants to make
room for other equipment.
The set is in excellent condition and consists of the RX, TX and mounting
and is perfect to use as a vintage military radio station.
I can give information on how it was changed but if you are interested best
thing is to get in contact with Tony Helm
Tel. 44 1752 261345, he lives in Plymouth UK.

From: "Gary - KJ6Q" <davison7@gte.net>
Subject: FS - Kenwood TS-780

I bought a new IC-746, which includes 2 meters, so have an excellent
TS-780 dual-band multimode transceiver available. It's 10 watts on 2
or 432, SSB or FM. It's in perfect physical and operating condition,
comes with hand mic, original box and operating manual. I am the
original owner. This is a base station rig with its own built-in AC
supply, and is about the same size as a TS-450. Its been a great rig,
but something better came along...

Price is $400 - reply via Email

Subject: FS/Trade Icom 781 HF,,..

Icom 781 HF rig with built in tuner,built in scope,built in power
supply. 150Watts, Does full
power, I put it on a dummy load and it puts out 150 Watts. Comes
with Manual,Power Cord.
No original box and no mic comes with it. This rig works 100
percent
and the scope is nice and bright. The metal cabinet that goes around
it has a few touch ups on it.
The serial number is: 01779 As I stated, everything works
GREAT. Of course this would be double boxed
and packed well.

WAS: 2,675.00 NOW: 2,500.00 FIRM
Or trade for GM300 VHF and UHF Mobiles
of equal value or Spectra Mobiles VHF and UHF. Ham Gear,
Also looking for Collins Gear. Just let me know what you have.

From: "Webcpa" <webcpa@netscape.com>
Subject: FS 60's Homebrew gems

1. Antenna tuner from the ARRL handbook. Has a home-built cabinet, with
a funky little meter and some nice construction. 200 watts, maybe. The parts
alone are worth more than this: $ 40

2. Antenna relay box, with a heavy duty 110v DPDT relay, coax connectors,
an on-air light, great for older BA's $ 20

3. A really wonderful AC power monitoring box, in a cabinet 12 w, 9 h, 6 d.
Has three 6.5 inch meters that tell you AC volts (90-130), Amps (0-20) and
Hertz (55-65). So you can tell not only the voltage, amperage but also the
frequency of the AC. Hooks up to 220 or 110. Meters alone are worth the
asking price: $ 75

.

From: Mike Sanders <k0az@swbell.net>
Subject: FT-101ZD mods?

The 101ZD has one of the quietest IF chains around. Does not suffer from
poor sensitivity, overload or any other poor performance I can think of.
The noise blanker which is front panel adjustable WORKS. Smooth clean
audio and just simply a terrific receiver. The ZD is nothing like the
earlier
101s and was one of the best kept secrets in ham radio regarding it's
performance. The later Mark II and Mark III had upgrades including the
warc bands and the ability to include a board for AM OR FM but
not both at the same time. The APF audio peak filter and audio notch
filter really works. The rig comes standard with cascaded crystal filters
I believe and there was an optional (600hz ??) CW filter available.

Sometimes the push buttons would oxidize on these radios and cause
freq drift etc. Simply pushing and activating the various buttons from time
to time would "fix" this. If memory serves the VFO select and RIT buttons
would cause this problem. No big deal though.

Basically I do not know why anyone would want to modify a ZD. They
are fine radios and totally underated and discounted by the masses.

Congrats and good luck. You have a nice rig. 73, Mike K0AZ

Hello,
Doing some spring cleaning, and I have some operators manuals up for
grabs. Most are decent copies. Please make an offer if you have the need
for any of the following:

RCA CR-91A (copy)
Hallicrafters S20R (copy)
Kenwood TS830S (copy)
Kenwood TS140/680S (copy)
Realistic DX-160 (original)
Drake 1977 Equipment Catalog (original)
Also have some original dealer spec sheets for the C line and FT101

Thanks,
Chris VE6RDC

Subject: Drake TX4 Probs

I am having serious probs with my new (old) Drake transmitter. I put it
online abt 1 week ago, and its output has gradually faded from abt 50 watts
(as measured on my MFJ 941E transmatch) to almost NONE!!! What could be
wrong? Are my finals kaput? This seems to have been a gradual problem, but
today when I fired 'er up, almost no output at all. Please help!

From: wo02rley@snowhill.com
Subject: FS: APS-104 radar modulator

I have a mil surplus modulator unit from APS-104 search radar (likely
from B-52 bomber - 1960s vintage). Was used to fire a large pulse
magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV
rectifiers and a few smaller tubes, oil caps, relays, transformers and
other parts all in airtight aluminum canister. Also have copy of service
manual (extra $5 for all, n/c for just the basic schematic & info).

Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. NOTE: Please REMOVE the "02" to leave "worley" to reply or call 334-347-5281 day/eve.

Yes, DJ2VN, I found the info in "Technical Topics Scrapbook 1990-1994"
which
had some further info from Dick Rollema PA0SE who built a radio using two
DAH50s in 1940 which was published in the Dutch magazine "Radio-Express". He
also mentions building radios using the A441. There is also a simplified
circuit for a 2-terminal oscillator using the A221 space-charge-grid
pentode.

From: "Lane Ku7i"
Subject: Modified SB-220 $625 shipped

This is a real workhorse of an amp. Recent procurement of a homebrew 4CX1500 amp forces the sale of this gem.

Modifed with the following:

1. Change of tuning dials from 1:1 to 6:1 reduction with vernier drives.
2. Back to back meter protect diodes.
3. Power supply diodes, bypass capacitors and equilizing resistors have been replaced.
4. Placed diode accross main T/R relay to increase relay life.
5. Placed 200 ohm dropping resistor in series with relay to protect contacts.
6. New T/R relay.
7. VHF parasitic suppressors installed on both the tube anode side and the cathode side.
8. Installed HV fuse resistor to replace choke in HV line.
9. Grid fuse protection using Rich's (AG6K) resistors and capacitors.
10. Cooling fan rebuilt. This baby is QUIET and moves a LOT of air.

I have notes on all of these mods as well as the published info that AG6K includes with his kits. This amp works better than new. The ONLY reason I am selling this is because of the new HB amp I just picked up. I will also include a copy of how to add 160 meters using AG6K's method. Not difficult to do.

The plate voltage on this amp idles at about 3100 and fully loaded at 1300 watts out drops to about 2600 or so. You can wire the amp for 120 or 240 but I recommend 240. Cosmetics are really nice, about an 8 to 8.5 out of 10. There was a Drake low pass filter bolted to the top of the case and as a result there are four non-original holes in the top of the cabinet.

This amp covers 80 to 10 including WARC. About 100 watts of drive for 1250 to 1300 out on 80 to 17 and a little less on 15, 12, and 10 meters. There are not seperte band switch positions for 17 and 12. Use the 15 and 10 meter band switch postions for those two bands. Use your auto-tuner is driving it with a solid state rig (on 17 and 12).

Have original manual and copies of all of the mods. The amp works PERFECT. Tubes are Eimac and of course full output.

Price is $625 shipped lower 48.

I have to put up with wall-to-wall right-wing dickheads on the radio, not on a newsgroup! Only members of the aforementioned dickhead group, supporters of the party that takes in twice the money that the Dems do, would have the temerity to use fund raising to beat up the Dems. Your party and your pols are, and always have been, the party that advances the interests of rich people as against the poor and middle class, and The Repubs reward them handsomely and continuously for their loyalty.

You know the particularly extreme examples as well as I do. Everyone does.

So put a sock in it!

Date: Sat, 4 Mar 2000 09:52:04 -0800 (PST)
From: radiomuseum@webtv.net
Subject: QUESTIONS: Johnson Desk KW - Bias & Screen Mods?

Hi all,
I'm in the final stage of a Johnson Desk KW restoration - (that is,
getting it to work correctly!) SN is 100280, so it is about the middle
of the production of the 402 (or so) desks. The bias resistor network
and the screen regulator chassis differs from my schematic/manual, which
is dated 1959. The bias network has eliminated R214 & R215 and has
changed the value of R208 from 100 ohms to 3K ohms. There are also
changes to the wiring of the pots for adjusting bias and screen current.
It is obvious that these are amateur changes because of the splices in
the harness that are covered with electrical tape. IS anyone aware of a
published mod (Johnson or not) that involved the bias network?
ALSO, the screen regulator chassis sould have a closed-circuit jack to
allow screen current measurements. My reg. chassis has a binding post
and ground connectors, which would suggest that screen voltage would be
measured rather than current. HAS anyone seen this as a mod or is this a
Johnson upgrade that didn't make it into the manual?
THANKS in advance for any information. E-mail or post okay.

4200. Wanted: NC-300 parts/Antenna relay

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-13 00:00:00 UTC
From: mlangen@earth.execpc.com
Message-ID: <38cd2c82$0$40286@news.execpc.com>
Source record: 69733

If anyone is parting-out an NC-300 (or 303), I'm looking for the two vertical metal strips that cover the rack-mounting cutouts at each side of the front panel. I think these items are purely cosmetic, but I'd like to replace the missing ones on my '300 anyway.

Also looking for a good, serviceable Dow Key antenna relay with SO-239s AND outboard SPDT switch (would actually prefer a DPDT accessory switch -- although I can't recall whether that was an available option). Would also consider a nice 275W EFJ Matchbox w/internal T/R relay and switching.

Can anyone help?

Thanks and 73,

Mark -- WA9ETW

Hello

I have a Breting 9 receiver which needs some minor repairs. I would
appreciate someone telling me where I can locate a schematic for it.

Thanks John Russo KF2JQ

Subject: ---------FS: BIG HV transformer!---------------

(2) for sale- 4000 VAC with a center tap- 2.1 amps CCS, 175lbs, see pic @
http://members.aol.com/jimmoci/trans.jpg Yes,thats a 3-500Z as a reference for
size in the pic. These transformers are very big and have alot of duty cycle.
They are removed from 5KW HF Jammers used by the military. They have multiple
taps from 208VAC to 240VAC so voltage can be changed + or - a couple hundred
volts to suit your needs. It also has a center tap. $250 each. They weigh
175lbs each so pick up near Philly is required. I will be at he Trenton/DVRA
Hamfest and the Baltimore/Timonium Hamfest so I can meet someone there with
them also.
Thanks for looking,
Jim

Subject: FT-101ZD mods?

Great info - and reassuring - Al. The FET swap in the 101E's sure made
a BIG improvement, don't know if the 101ZD's were down on sensitivity
like the 101E's were on the higher bands - guess I will find out!

If anyone else has mod info on the 101ZD, sure would appreciate it.

From: "D&N"
Subject: Heathkit AR-3 help needed

I can't locate a schematic for the Heathkit AR-3, either on the net, or at our museum archive. I have one for the AR-2. The labels are missing on the back of the AR-3 chassis, so I need to know the purpose of two connections. Just to the right of the power cord, as you look at the rear of the chassis, is a small, porcelain insulated jack. Between that and the noise limiter switch is what looks like a tube socket. I had a working AR-3 several months ago and I don't recall seeing that socket on the back of the chassis. There is a headphone jack to the right of the noise limiter switch. Can anyone identify the purpose of the porcelain insulated jack and that other socket? Also, which is the normal position for the limiter switch, up or down ? Am I correct , that the selector switch should be in the "phone" position for normal operation? I have bridged a temporary set of filter caps and disconnected the original filter can. I'm getting lots of noise but am not able to get any stations. Any help would be appreciated.
Thanks,
Dick

From: "Tom Peters"
Subject: Manuals for Regency HR-212

Would anyone be able to help me with a manual for a Regency HR-212 rockbound 2m rig? I inherited one, sort of, and would like to get it working. Best info is that it was working when pulled in the early '80's.

I'd be happy with a photocopy of the operating manual, although someday I'll be wanting the maintenance manual too, probably. I'll pay for copy and mail costs.

It would help if you'd reply by e-mail rather than I post. All help greatly appreciated.

TIA and 73 de N9QQB

From: mongrel
Subject: My new Pye P45

Hey! I have a Pye P45! It was made about 1951.
It is a single-conversion superhet.
It has a nice, big, slide rule dial.
It has a 6" Rola speaker that works, with
one pentode audio out.
The tuning knob has a flywheel.
Condition and cosmetics are good. It looks exactly
like the P28 at
http://www.vintage-radio.com/pye.htm
but the corners of the speaker and display area are
slightly rounded, and the knobs are spaced evenly.

That's all I know. I'm disassembling and cleaning it now.

I have a lot of experience with tube audio circuits.
This is my first tube radio. I think I can reasonably
expect it to "sound good", if the station is clear

and strong. This is often the case here, every day, with
Radio Marti, VOA, and Radio Havana Cuba, and others.
I would like to put it to work, and listen
to it, while I tinker with my other projects, which
I never seem to finish.

Subject: SX-111 "Mystery Tube"

Hi,
The newer version of SX111 has a product detector using 6BY6. Your receiver is a newer one. You can ask around to get the manual for newer version. I think newer one sounds better on SSB, you are the lucky owner. Good luck.

From: dan harlan
Subject: Valiant Mod. Xfmr ???

Hello All,

I got a mod xfmr from an old Valiant and need to
identify how the "Class C" side is wired. I have 4 wires,
2 half's of the winding. Apparently the connection between
the two was the 500 ohm output for external loads.

One part of the "Class C" winding has a green
lead and the other end of that winding has a green/yellow
lead. The other part has two muddy brown leads.

How could I go about "phasing" the two half's
of the class "C" side. I wont need the 500 ohm tap
for my application.

TIA

From: mlangen@earth.execpc.com (Mark Langenfeld)
Subject: Wanted: NC-300 parts/Antenna relay

If anyone is parting-out an NC-300 (or 303), I'm looking for the two vertical metal strips that cover the rack-mounting cutouts at each side of the front panel. I think these items are purely cosmetic, but I'd like to replace the missing ones on my '300 anyway.

Also looking for a good, serviceable Dow Key antenna relay with SO-239s AND outboard SPDT switch (would actually prefer a DPDT accessory switch -- although I can't recall whether that was an available option). Would also consider a nice 275W EFJ Matchbox w/internal T/R relay and switching.

Can anyone help?

Thanks and 73,

Mark -- WA9ETW

From: "Gary - KJ6Q" <davison7@spamlessgte.net>
Subject: FT-101ZD mods?

I'm awaiting delivery of a new-to-me Yaesu FT-101ZD, and am wondering what sources may be available for upgrading this rig, especially in regards to receiver sensitivity on the upper bands, as well as reducing internal noise floor. The 101E I owned years ago was GREATLY improved by a better grade solid state device (RCA) in the first RF stage, as well as the first and second IF - I assuming the 101ZD might also benefit from a similar mod if one is available?

Would appreciate any pointers - wonder if "FoxTango" is still in operation?

To Group:
Thanks very much for the input from personal Emails, etc. I found the
problem--it was one 0.1/200v cap that I put in the wrong place. I was one
connector off! I found this from suggestions to re-check caps in the 60 Khz
IF section and there was my mistake. I re-aligned the IF and BFO sections
and it works beautifully now.
Thanks very much again!! Dave

From: "D&N" <allenmapsons@99main.com>
Subject: help with Heathkit AR-3

Over the weekend, I bought a Heathkit AR-3 with 2 tubes missing. Can anyone describe the socket layout for the AR-3? Across the rear of the chassis from left to right as seen from the back of the radio there is a 12A6, an empty socket, a 12AV6, and the 5Y3GT. The socket next to the variable tuning condenser is empty. I'd like to know what the missing tubes are and which sockets they go into?
Thanks,
Dick

Herbert

it is interesting to read, cannot make so many comments. Got the info
from my friend LA9DL (can give his email on request) who is
specializing on old valve data, he will borrow my old Luftwaffe DMW
R&#65533;hren for photographing....

Wasn't aware of BCH1
My book also mentions KCH1, Mischr&#65533;hre f&#65533;r batteriegespeiste
&#65533;berlagerungsempf&#65533;nger, but seems not to be compareable since it has
maximum anode voltage of 135V, but only data I have for ACH1 is
shortform data in the RTT book from Franzis Verlag and Vademeccum
1965-67, while some data is found in
R&#65533;hren und Daten moderner Empf&#65533;nger und Kraftverst&#65533;rkerrohren -
Philips 1940, but not ACH1 and BCH1

> find the connections, ACH1 has three different socket connections,
> Philips types has two, but Philips cannot tell which is which

interesting,- i've never heard about an ACH 1 having 3 different
connections... why are there problems of finding the "right" ones ?
which Philips tubes have ambiguous connections ?

mabe you refer to an "ACH 1" which is unknown to me. the real ACH 1
was developed by Telefunken in 1933 (together with the series string
version of type BCH 1). a bit later the "ACH1 S" appeared, where the
"S" stands for "Schnellheiz-Kathode" (speed-up heating).this "bifilar"
heater at the same time reduced the current (650 mA instead of 1 A).
in 1936/37 when the B-types became obsolete, the CCH 1 replaced the
BCH 1 (there's also a CCH 2 but it has different data).

for all these types i can't see any problem to identify the base
connections. while the ACH 1 and BCH 1 have a 7-pin hexode base,
the others are equipped wih 8-pin side-base sockets. in all cases
the top-cap is connected to the triode grid #1. the layout of each
type of socket is the same - therefore, the connections are uniquely
determined.

finally, Telefunken produced a special version of the original ACH 1
named "ACH 1 C" with a side-base socket. it was meant to be a
replacement-tube for radios in 2 regions which were occupied by
the nazis (in czechoslovakia / austria).

if you have infos about any other ACH 1-like tube i'd be interested
to know details !

thanks & cheers -
Herbert

Nope, this was radios from the late 30's. "Modern" superhets, with the
A-range tubes. It was probably top-of-the-line stuff from that area. I will
look thru my NRHF schematics.

The UM4 fil is for 12.6V also.
Yes. There were also the 50mA 'V' tubes, believe they were only used in
small <3 tubes sets (Volksempf., Deutscher Kleinempf&#65533;nger)

>
> The philips book mentioned earlier shows an application note for

Both tube series were used, but I've seen the '21' series tube set more often
than the single-digit U-tubes with octal base.

I think Mouser Electronics sells them now. Check their catalog. I think they
started selling them in 98.

Subject: Military Avionics -- 1950's Question

Well, let's see. The HF on the Super Connies started as the 618T, then
to the "S". (In reality they originally had the AM precursor to the 618
series). Nav was the ARN-14 VOR with an ID-249 and the ID-250 RMI. I
don't recall the Glide Slope receiver... a 51R..something. Maybe a
BC-733 on the early types. The ADF was dual ARN-6's (AS-313 loops). The
only reason I have any idea is that my sqdn got stuck with emergency
maint on them from time to time. Any help?

>

Mike,

I have one of those beasts, and the manual that goes with it. You should be able to make the test leads from available parts. The COMMON lead is a straight shielded cable, with the shield open at the test lead end. The MA/OHMS lead is a 2 conductor shielded cable, with the two conductors connected to the test lead at the test lead end. The VOLTS lead is a shielded cable, and somewhere in the probe, there is a 1meg 1% resistor inserted. You might make this out of an old scope probe. If you need the schematics and calibration instructions, I can loan you the manual, and you can copy it and return it.

I have a very nice Heathkit DX-100 Transmitter. I purchased this at a flea market in 1988 and have used it less than 50 hours since then.

Cosmetically, I rate it an 8.5 out of 10. Faceplate, vfo dial, knobs and emblems are all excellent. The case has the usual scratches and very slight color fading. The chassis is the copper-plated variety with some areas of surface corrosion. The wiring was very nicely done.

Electrically, I rate it an 8.5 out of 10. I replaced one audio tube back in 1992 and this has been the ONLY failure to date. It has full output (100+ watts) on 80/75 meters with regular AM and CW contacts. A NEW pair of matched 6146s have been installed in 1998. This transmitter has only been used on 80/75 meters and never tested on other bands. To my knowledge, and my best investigative techniques, the unit HAS NO MODIFICATIONS.

This transmitter has been exclusively paired with a Hammarlund HQ-160 receiver and used with a D-104 amplified microphone and an 80 meter dipole. It has never been abused or stored anywhere but indoors. It not only comes with THE ORIGINAL ASSEMBLY MANUAL (in excellent condition), it comes with a manual photocopy. Downsizing the shack has forced me to sell this wonderful 105 lb transmitter. You WILL NOT be dissatisfied.

THIS UNIT IS FOR PICKUP ONLY. I live in Farmingdale, NY (Long Island). I would not risk shipping this and you wouldn't be happy paying for it. Contact me in the evenings (6pm to 9pm EDT) for any additional questions at 516 293-0341 and ask for Lou. Asking $250 OBO.

Go to http://hoflink.com/~lbellock/FOR%20SALE/dx100_frt.jpg or http://hoflink.com/~lbellock/FOR%20SALE/dx100_bck.jpg for a picture.

I have a very nice Hammarlund HQ-160 Receiver. I traded this rig for an old PC in 1988 and have used it less than 50 hours since then.

Cosmetically, I rate it a 9 out of 10. Faceplate, tuning dials, knobs and emblems are all excellent. The case has a few scratches and very slight color fading. The chassis is has very slight surface corrosion and the original cord is nice and intact.

Electrically, I rate it a 10 out of 10. It has velvety smooth tuning control, excellent selectivity and sensitivity. The audio is a dream, especially from THE ORIGINAL MATCHING SPEAKER. The Q-multiplier is wonderful when digging out those distant CW signals. This receiver has been used on 80/75 meters and never been tested on other bands. To my knowledge, and my best investigative techniques, the unit HAS NO MODIFICATIONS.

This receiver has been exclusively paired with a Heathkit DX-100 transmitter. It has never been abused or stored anywhere but indoors. It comes with a reproduction copy of the original manual and the matching speaker, which is in excellent condition. Downsizing the shack has forced me to sell this wonderful 40 lb receiver. You WILL NOT be dissatisfied.

THIS UNIT IS FOR PICKUP ONLY. I live in Farmingdale, NY (Long Island). I would not risk shipping this and you wouldn't be happy paying for it. Contact me in the evenings (6pm to 9pm EDT) for any additional questions at 516 293-0341 and ask for Lou. Asking $250 OBO.

RCA BTA 1R1 1 KW broadcast transmitter. Operational. Tuned to the top portion of the broadcast band. Excellent (large) candidate for 160 or 75. This unit is in good condition for its age. (1960 ish) Scratches on cabinet and a few switches need new paddles. Needs 208-240 VAC single phase.
You will need a pickup for this baby. 1300 lbs, however the transformers are seperate for ease of moving. Easy to load.
I would not be selling this except I can't afford to move it across the country.
Unit is in Toronto. Must be picked up. Can not deliver.
$750 US or trade for HF transceiver, commercial HF RX or old tube RXs.
email me directly for pictures and for any questions.

Currently wanting to provide a good home for a better-than-average Heath DX-100B - interested in continuing AM operation on 10 and 160 meters. Only interested in the "B" version, and NOT interested in shipping one of these beasts via UPS due to size and weight. If any here have a nice one, and are needing to free up space in the hamshack - but hate to see their "pride and joy" fall into unappreciative hands, contact me via Email with full info.

Would also consider a Johnson Valiant in excellent condition.

Thanks

Wanted... the following stuff:

Heathkit:
- Power transformer and plate current meter for a DX-40
transmitter. I don't wanna spend a fortune for these.
The transmitter was a freebie and it's real scruffy.
I just hate to junk it out when all it needs is to
have a transformer and meter put in.
- Frequency dial scale for a VF-1 vfo. Must be in good
shape with all markings intact. I'll buy a whole vfo
to get the dial if I have to (and it's cheap enough).
I could also use a set of decent original VF-1 knobs,
but they're not a necessity.
- Front panel for an AC-1 antenna coupler. Must be in
good shape, with paint and all markings intact, and
NO extra holes or modifications.

Drake:
- T-4XC transmitter in good working order w/manual.
It doesn't have to be a pristine "museum piece".
My lonely R-4C receiver is longing for a mate...
- Accessory crystal cover for R-4C receiver.
- 8 KHz a-m filter for R-4C receiver.
- Model 2-AC calibrator and 2-NB noise blanker. Must
be working. I need these to go in my 2-C receiver.

Source record: 69629

I have for trade, a military radio set RS-6. This consists of 4 separate, metal "boxes"---the transmitter, receiver, power supply, and filter accessory unit. The set worked when I hooked it up several months ago. Each unit has the "oilcloth" bag for storing & transporting it. These units utilize vacuum tubes. My understanding is that this set may have been designed for clandestine use, and also as an emergency radio for downed pilots on C-47 planes.
I'm looking for a Zenith military Transoceanic radio, model R-520 / URR, in good cosmetic and working condition. Also looking for good tube audio equipment, such as McIntosh amps. Thanks.---Steve Beale/ Memphis, TN / 38117.

4247. Re: Heathkit AR-3 help needed

Source record: 69630

The phono plug is for I.F. input and the octal socket is for accessory. They are both there for the Q-Multiplier accessory that was offered for the AR-3. The slide switch is the Noise Limiter, Up is ON and Down is OFF. Seems you need to go through the tuning and line up from the manual. Get one from W7FG Vintage Manuals.

Good Luck, 73 Larry W6LAR

Doug - the RCK isn't Navy issue, as I recall it is a Civil Airways Administration receiver. One way to tell: does it have a C.O.N.S switch? If so, it's a CAA receiver. I sold one, with manual, to an aviation museum in colorado last year. Maybe you could track down the museum and get them to copy the schematic.

IIRC it is just like an NC100 except it has a CONS circuit.

The AC-4 (or AC-3) PS powered all Drake's 4 line radios, transmitters that is. They are quite popular and fetching a faily good price at this time. New, back in 1967, they retailed for about $79.95. Now, they are going for at least that on E-bay, that or more. They output 600 volts, 250 volts, 12.6 volts, and -45-60 volts from that plug... at least when they are working! (wink to Dean!)

4256. My new Pye P45

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-14 00:00:00 UTC
From: mongrel <scruffy@bellsouth.net>
Message-ID: <38CEC279.58A9E871@bellsouth.net>
Source record: 69666

Hey! I have a Pye P45! It was made about 1951.
It is a single-conversion superhet.
It has a nice, big, slide rule dial.
It has a 6" Rola speaker that works, with
one pentode audio out.
The tuning knob has a flywheel.
Condition and cosmetics are good. It looks exactly
like the P28 at
http://www.vintage-radio.com/pye.htm
but the corners of the speaker and display area are
slightly rounded, and the knobs are spaced evenly.

That's all I know. I'm disassembling and cleaning it now.

I have a lot of experience with tube audio circuits.
This is my first tube radio. I think I can reasonably
expect it to "sound good", if the station is clear
and strong. This is often the case here, every day, with
Radio Marti, VOA, and Radio Havana Cuba, and others.
I would like to put it to work, and listen
to it, while I tinker with my other projects, which
I never seem to finish.

This is a Barker and Williamson model 3001 hybrid coupler from a large estate. I have to admit I don't know much about this thing as I haven't found the manual for it yet. It appears to be used to connect a phone patch, tape recorder or other audio device to you transceiver and record/playback while on the air. If you know more about this device email me and I'll add it to the page. There are some scratches on the top of the cabinet. The face plate is in fine condition.

This is a Hallicrafters R-46B speaker from an estate. It is in nearly perfect condition. There are a couple of small scotch tape marks that would easily clean up. There are no scratches in it anywhere. After very close examination I did fine an extremely small nic the size of a pin head on the upper right front. It isn't visible unless you look really, really close. The grill cloth is flawless. It was meant to match the Hallicrafters SX-62B, SX96, SX-99, SX-115 and others. This is one of the nicest R-46B's I've seen.

Anchorites,

I recently had to help the sister of a deceased ham friend clean out some old equipment that I have no need for. The equipment is:

2 ea HP 410A RF/AC voltmeter

2 ea HP 410B RF/AC voltmeter

1 ea TS-497 signal generator, 2-400 MHz (seems to be military version of Measurements Corp Model 80 ???)

Can anyone tell me if there is any value to these? If interested, please make an offer on any or all; also plan on shipping costs from the Detroit area. Otherwise, (sadly) it will probably end up as dumpster food.

Thanks,
73/Carter/K8VT

I have a very nice Hammarlund HQ-160 Receiver. I traded this rig for an old PC in 1988 and have used it less than 50 hours since then.

Cosmetically, I rate it a 9 out of 10. Faceplate, tuning dials, knobs and emblems are all excellent. The case has a few scratches and very slight color fading. The chassis is has very slight surface corrosion and the original cord is nice and intact.

Electrically, I rate it a 10 out of 10. It has velvety smooth tuning control, excellent selectivity and sensitivity. The audio is a dream, especially from THE ORIGINAL MATCHING SPEAKER. The Q-multiplier is wonderful when digging out those distant CW signals. This receiver has been used on 80/75 meters and never been tested on other bands. To my knowledge, and my best investigative techniques, the unit HAS NO MODIFICATIONS.

This receiver has been exclusively paired with a Heathkit DX-100 transmitter. It has never been abused or stored anywhere but indoors. It comes with a reproduction copy of the original manual and the matching speaker, which is in excellent condition. Downsizing the shack has forced me to sell this wonderful 40 lb receiver. You WILL NOT be dissatisfied.

THIS UNIT IS FOR PICKUP ONLY. I live in Farmingdale, NY (Long Island). I would not risk shipping this and you wouldn't be happy paying for it. Contact me in the evenings (6pm to 9pm EDT) for any additional questions at 516 293-0341 and ask for Lou. Asking $250 OBO.

Go to http://hoflink.com/~lbellock/FOR%20SALE/hq160_frt.jpg or http://hoflink.com/~lbellock/FOR%20SALE/hq160_bck.jpg for a picture.

Source record: 69558

Fope sale Hammarlund HQ-129X with hard to find large matching speaker.

The HQ-129X receiver is in good condition and works great. It has some marks that can be expected from a receiver of this age but no dents or majoe flaws.

The speaker is the large matching unit in excellent condition. This speaker is difficult to find especially in this condition.

A copy of the manual is included. $295 OBO plus shipping.

From: jsbasb@aol.com (JSBASB)
Subject: For Trade : military radio set RS-6---Trans./Rec./power supply

I have for trade, a military radio set RS-6. This consists of 4 separate, metal "boxes"---the transmitter, receiver, power supply, and filter accessory unit. The set worked when I hooked it up several months ago. Each unit has the "oilcloth" bag for storing & transporting it. These units utilize vacuum tubes. My understanding is that this set may have been designed for clandestine use, and also as an emergency radio for downed pilots on C-47 planes.
I'm looking for a Zenith military Transoceanic radio, model R-520 / URR, in good cosmetic and working condition. Also looking for good tube audio equipment, such as McIntosh amps. Thanks.---Steve Beale/ Memphis, TN / 38117.

>cut off. Meter seems OK, so I would like to complete it.
>

Mike,

I have one of those beasts, and the manual that goes with it. You should be able to make the test leads from available parts. The COMMON lead is a straight shielded cable, with the shield open at the test lead end. The MA/OHMS lead is a 2 conductor shielded cable, with the two conductors connected to the test lead at the test lead end. The VOLTS lead is a shielded cable, and somewhere in the probe, there is a 1meg 1% resistor inserted. You might make this out of an old scope probe. If you need the schematics and calibration instructions, I can loan you the manual, and you can copy it and return it.

Doug Moore

Subject: HP 410A, B, TS-497 sig gen

Anchorites,

I recently had to help the sister of a deceased ham friend clean out some old equipment that I have no need for. The equipment is:

2 ea HP 410A RF/AC voltmeter

2 ea HP 410B RF/AC voltmeter

1 ea TS-497 signal generator, 2-400 MHz (seems to be military version of Measurements Corp Model 80 ???)

Can anyone tell me if there is any value to these? If interested, please make an offer on any or all; also plan on shipping costs from the Detroit area. Otherwise, (sadly) it will probably end up as dumpster food.

Thanks,
73/Carter/K8VT

From: Paul
Subject: RCA Broadcast TX For Sale

RCA BTA 1R1 1 KW broadcast transmitter. Operational. Tuned to the top
portion of the broadcast band. Excellent (large) candidate for 160 or
75. This unit is in good condition for its age. (1960 ish) Scratches on
cabinet and a few switches need new paddles. Needs 208-240 VAC single
phase.
You will need a pickup for this baby. 1300 lbs, however the transformers
are seperate for ease of moving. Easy to load.
I would not be selling this except I can't afford to move it across the
country.
Unit is in Toronto. Must be picked up. Can not deliver.
$750 US or trade for HF transceiver, commercial HF RX or old tube RXs.
email me directly for pictures and for any questions.

Date: Tue, 14 Mar 2000 18:46:34 GMT
From: k5dh@raytheon.com (Dean Hemphill, K5DH)
Subject: Wanted: Heath and Drake stuff

Wanted... the following stuff:

Heathkit:
- Power transformer and plate current meter for a DX-40
transmitter. I don't wanna spend a fortune for these.
The transmitter was a freebie and it's real scruffy.
I just hate to junk it out when all it needs is to
have a transformer and meter put in.
- Frequency dial scale for a VF-1 vfo. Must be in good
shape with all markings intact. I'll buy a whole vfo
to get the dial if I have to (and it's cheap enough).
I could also use a set of decent original VF-1 knobs,
but they're not a necessity.
- Front panel for an AC-1 antenna coupler. Must be in

good shape, with paint and all markings intact, and
NO extra holes or modifications.

Drake:
- T-4XC transmitter in good working order w/manual.
It doesn't have to be a pristine "museum piece".
My lonely R-4C receiver is longing for a mate...
- Accessory crystal cover for R-4C receiver.
- 8 KHz a-m filter for R-4C receiver.
- Model 2-AC calibrator and 2-NB noise blanker. Must
be working. I need these to go in my 2-C receiver.

73,
Dean, K5DH

4308. FS: Hammarlund HQ140X with Matching speaker

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-15 00:00:00 UTC
From: Larry Menzel <retire@rconnect.com>
Message-ID: <scvvgb5k9n47@corp.supernews.com>
Source record: 69568

I have a very clean HQ140X with its matching speaker for sale. This radio is in excellent condition, works on all bands general coverage. This radio has excellent audio...wide selectivity with 6 position selector switch. Noise limiter works well. Dial calibration is quite good, and dial lights are working. Single conversion receiver. Two tone metal cabinet. Some scratches on cabinet side and top, but for a 50 year old radio, it's pretty nice. Radio weighs 47 lbs.

Matching speaker is very hard to find. Condition is good. Someone put some nice gold cloth in front of the speaker so it's very attractive. I will not sell the speaker separately unless the purchaser of the radio does not want/need it...they make a lovely pair.

I'm only selling this radio to keep my boatanchor collection at a reasonable level...and it should be in use somewhere.

$300 plus shipping CONUS from 554, Minneapolis, MN

4309. Anyone using an 803 as a PA?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-15 00:00:00 UTC
From: Tom Bruhns <tom_bruhns@agilent.com>
Message-ID: <38D00A05.884F44C6@agilent.com>
Source record: 69569

Hi all,

Well, I'm getting a little tired of seeing 90% FS/FA postings...and thought I'd see if there's actually ever any discussion here... (Hey, there IS a r.r.a.forsale group...)

I have a lovely old USN/RCA 803 with a white polished ceramic base that just might be rather gassy, but the filament does seem intact. I thought it would be cool to make a PA with it, just for the esthetic glow if nothing else. Anybody out there using an 803 for anything?

Cheers,
Tom

John,

You can get the schematic, copy, and alignment instructions from Alton H. Bowman, 4172 East Ave., Canandigua Ny., 14424. The cost is $6 and $13 for the schematic only and a complete copy of the manual respectively. Some large manuals will me more, e.g. Heath TX-1 Apache. I have delt with him for years. Feel free to mention I referred him to you. You should send a pictorial of the chassis showing the valve (tube), transformers, cans, tuning condenser, etc. This will greatly help him in getting the schematic out to you. Feel free to tell others about him.

I have a Breting 12. It is beautiful inside and out. I STRONGLY suggest replacing the condensers and resistors. The wax should be the Sprague Orange Drops, old mics replaced with new silvered micas, electrolytics with Sprague Atoms or another can, the smaller resistors to 1 and 2W flameproof, the higher power resistors with Ohmite types. The use of 1W resistors does make a difference in the amount of noise, less noise. The coupling condensers in the audio should be raised in value to give better fidelity, this includes the cathode bypass on the output (about 500mfd 25V). If you need any help with getting the parts or restoration tips, email me at vincentelectronics@erols.com. There is nothing like making a nonworking radio cleaned and restored working great. Be sure to clean the chassis and valves. Ammonia is the best to clean chassis and valves.

From: speedskater1@my-deja.com
Subject: Another sell then advertise

I had called about a Collins 20V that was for sale in NC. The guy admitted he sold it long before he sent in the ad. What is the point of selling something THEN sending in an ad advertising it for sale? The only thing I can think of is that the seller wants the attention of people contacting him. If someone does this I will never believe the seller again assuming the item is long gone. False advertising is not a way to generate customers. A bad experience can be spread to many as a warning not to use a seller. I have seen many different items I am interested in buying advertised only to find out it was sold long before it was advertised. A WTB seems to be the best way to go. At least you know the item is there. I know I am not the only one that has ever had this experience. A friend has had this happen to him several times in the past.

Are you sure that you wired in those replacement capacitors correctly...?
Being off by one lug on a terminal strip or one pin on a tube socket would
make a significant difference.

If it were me, I would probably start in the IF chain, where you probably
replaced a paper capacitor that was in this circuit, one that's responsible
for setting up the selectivity skirt(s)... if you don't have a schematic for
the receiver, you're going to need one for this job... good luck.

C.K.

From:
Subject: Help with Hammarlund HQ-170

Sounds like either a problem with the slot and the 60 kcs IF alignment.
Make sure you use a good
sig generator (even with a URM-25D its hard). Frank Lester (the father of
the HQ170) told me aligning the IFs
is a must. In his notes he also mentions a BFO problem that occurs if one
of the IFs is out. He suggests going thru the entire alignment again. I
had the opposite problem in that mine sounds great on 3.0 and 2.0 khz but
the sigs drop off 20 DB when I switch to ,5 or 1.0 khz.

Subject: Info Req: Very Old German Tubes

Herbert

you seem to have some interesting sources of information!
Have you ever seen any applications for RV2,4P45 and DAH50, believe
they are almost the same type of valve (Raumladegitter - gibt es ein
�bersetzung?),

DAH50 is mentioned in the Philips book(anno 1940), and an application
for simple battery operated receiver is shown, but I am not aware if
this type of valve has been used in commercial receivers

Prewar German consumer radios are becoming more and more collectible,
especially in the USA. I've been collecting them for a few years now and am
gratified to find more and more of them coming up from sources in Germany
and throughout Europe. They are generally top flight construction,
especially sets made from 1935 onwards!

Normally, yes, but the UY1(N), UCH4, UBL1 and so on, have OCTAL bases.
Normally, the 30 series (EF39 etc) have octal.
Then another exception: The battery '21' valves (DK21 etc) have octal bases..
Always there is an exception to the rules..

Subject: Modifications for the Heath HL-2200

Hi,
It is 99% same as SB221, same transformer, RF circuit parts, etc. The
only difference is the cabinet and addition of a stand by switch. It is
a good amp but it could be modified better. See AG6K mod. on old QST.
Good luck.

Date: Thu, 09 Mar 2000 17:41:31 -0500
From: Tim & Cathy
Subject: TS 440 ANT TUNER FIX

The automatic antenna tuner in my Kenwood TS 440S became erratic and would not tune my antenna on any band. The servo motors would continuously hunt and the swr remained >6:1.

The source of the problem was the change over relay, RL1, in the auto tuner. The MATSUSHITA DS2-M relay had burnt contacts. This relay has a clear case and once the tuner was removed from the transceiver, the problem was apparent.

I ordered a replacement relay (P/N S51-2417-05) from a Kenwood parts vendor and received an OMRON G6-234P. This relay is a direct replacement for the MATSUSHITA relay.

Replacing the relay corrected the erratic operation of the tuner.

I hope this info will help anyone experiencing a similar problem with their TS 440S

I have a decent TR4 with the RV3 VFO and AC3 power supply that I'd like to sell. Physical shape is about a 7 on a 10 point scale...front panel is flawless, some corrosion on the chassis, some scratches on the top of the case. Electrically it's perfect as far as I can tell. I've owned it for about 10 years and recently re-capped and aligned it. I would be happy to QSO you if you'd like to hear it. Sell as complete set only. Asking $275 plus shipping from 54725. Includes original manual and hand mic.

Steve, NX9Z

4313. TRADE my JOHNSON500 for your???

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-15 00:00:00 UTC
From: jimmoci@aol.com
Message-ID: <20000315182250.01751.00002840@ng-bg1.aol.com>
Source record: 69573

Before I put this thing up on Ebay I wanted to see what I could get in trade for it. I have a Johnson 500 RF deck. No power supply/modulator. It has some scratches on the front and around the corners but its not too bad. The Cabinet has been glass beaded and powder coated with a very tough wrinkle finish and is ready to be sprayed in Johnson Maroon. The inside is in nice shape and appears totally stock. I always intended to rewire my 4-400 modulator/power supply and make an overkill AM rig out of it but I just have too many projects and not enough time. I am looking for something I can plug and play that is exceptionally clean. I would prefer a Ranger, Valiant, Collins 32V, B&W 5100 or other super clean Plate modulated transmitter. I am also looking for a KWM2 or 2A. You guys know what this thing is worth and I know what other clean boatanchor rigs are going for (alot) so lets not insult each other. I will be entertaining offers till next weekend. If nothing catches my fancy it will be available on ebay.com

Tnx,
Jim

P.S. For those who are not familiar with this transmitter it is a 4-400 transmitter with an 811A modulator. Johnson did not make many of these and they are pretty scarce. The power supply/modulator was a seprate unit that sat on the floor. Many power supplies did not make it thru the years (including this one) and alot of hams would build their own that exceeded the specs of the Johnson original. There are a few of these rigs on 75 and 40 meter AM and they sound great. In stock form they are 500 watts input (approx 375 out) and with a beefier supply/modulator they will do more. I have had a few emails asking me the value of the unit. The last few that I have seen sell on the net have gone for $1400 and $1500. These were complete units. I feel this one is probably worth about $750 in its current state. The deck is working and has been tested on another hams working PS/Modulator. It is in average shape and is fully restorable and it comes with the original manual.
Tnx for reading, Jim

Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

For Sale: Three - DC Power Supplies (12 VDC input) for older (1960's) HF SSB Mobile Transceivers. Should work also with Drake, Heath, Collins, Swan, etc. typical tube-type mobile transceivers of that vintage. These are all transistorized-power supplies (no vibrators or dynamotors, etc.)

One - National NCX-D Mark II Mobile Supply. (Maybe for NCX-series rigs?) No voltage levels listed on the case.

One - Galaxy Transceiver Mobile Supply. No model number shown, but note inside the lid says the following voltages are produced:
+800VDC @ 600 ma, +325VDC @ 200 ma, and -100 VDC at 35 ma Bias.

One - Hallicrafters PS-150-12 Mobile Supply - shows output voltages of +500VDC @ 200 ma., +250 VDC @ 175 ma., and -75 to 140 VDC @ 10 ma. with an input of 12.6 VDC @ 20 Amps.

$30 each plus $12 shipping, or all three for $90 shipped.

Larry

FS: New (?) SBE M100X "SSB/AM Solid State Amplified Mobile Microphone" still in the original box, with instruction sheet and warranty card. Outside of Box says "New Mike", and it appears to have never been used. The mic has a gain control on the top, and the coiled cord has a 4-pin mic connector.

$30 shipped.

Foe Sale HQ-129X Hammarlund Receiver with rare large matching speaker. The speaker is a ten inch Jenson unit in great shape.

The HQ-129X is in good condition and works great. It has the usual marks that can be expected in a unit this old. It has no dents. A copy of the manual is included. $295 plus shipping.

Please reply direct to: na0y@worldnet.att.net or na0y@arrl.net Ken NA0Y

I need a power transformer for an old receiver I'm refurbishing. The secondary should be about 100V either side of center tap. Filament voltage(s) and current are not important since there's plenty of room in the case to mount an extra fil xfmr. Anyone got one they could part with?

Hello, and I hope someone has what I need.

I recently purchased an R4C, and I would like to get some addtional
2'nd IF crystal filters for it. Specifically, the 1500, 250, and 125
hertz ones. They don't have to be Drake brand, but they do need to be
a direct plug-in (on the back of the rig) and fully operational.

Please call or email info with prices to:

NeilR@innermedia.com

Thanks all!

I have a very nice Hammarlund HQ-160 Receiver. I traded this rig for an old PC in 1988 and have used it less than 50 hours since then.

Cosmetically, I rate it a 9 out of 10. Faceplate, tuning dials, knobs and emblems are all excellent. The case has a few scratches and very slight color fading. The chassis is has very slight surface corrosion and the original cord is nice and intact.

Electrically, I rate it a 10 out of 10. It has velvety smooth tuning control, excellent selectivity and sensitivity. The audio is a dream, especially from THE ORIGINAL MATCHING SPEAKER. The Q-multiplier is wonderful when digging out those distant CW signals. This receiver has been used on 80/75 meters and never been tested on other bands. To my knowledge, and my best investigative techniques, the unit HAS NO MODIFICATIONS.

This receiver has been exclusively paired with a Heathkit DX-100 transmitter. It has never been abused or stored anywhere but indoors. It comes with a reproduction copy of the original manual and the matching speaker, which is in excellent condition. Downsizing the shack has forced me to sell this wonderful 40 lb receiver. You WILL NOT be dissatisfied.

THIS UNIT IS FOR PICKUP ONLY. I live in Farmingdale, NY (Long Island). I would not risk shipping this and you wouldn't be happy paying for it. Contact me in the evenings (6pm to 9pm EDT) for any additional questions at 516 293-0341 and ask for Lou. Asking $250 OBO.

hi Jan-Martin,
well, the DAH 50 is identical to a "Wehrmachts"-tube of type RV 1 PG 1
also made by Philips/VALVO. both tubes have different bases, though.
the latter one had no top cap (grid #1) and its construction probably
was a bit more rigid.
i believe the DAH 50 appeared around 1940, the military version came
later in 1944. as far as i know there were delivery problems so that
it was never used in any Wehrmacht-set. nowadays it seems not too easy
to find these tubes, i think i've got only 1 DAH 50.
at those times the big advantage of tubes with a space-charge grid was
a very low plate voltage which made them suitable for use in portables.
since the space-charge cloud gets "discharged" by the extra grid, the
screening effect of the "virtual cathode" is gone, emitting electrons
can "feel" the full strength of the plate potential.
yes, the RV 2,4 P 45 is a Wehrmacht-pentode with space-charge grid,
and i know of only 1 WW-II device which used 2 of these tubes: it was
called "D.L.E." which means "kleiner Draht-Lausch-Empfaenger" (this
roughly translates to "small wire listening receiver"). it was a pure
AF thing and operated at a plate voltage around 20 V.
i know of 2 other german WW-II SC tubes, the RV 2,4 T 3 (triode) and
the LV 5 (tetrode). while the 1st one was used for a telegraph device,
the LV 5 (which earlier had the type "NE 5R") played some role in a
gadget designed for measuring heights in airplanes (using 375 MHz FM).
there were other civilian SC tubes, the RE 074 d was quite popular
in the late 20s/early 30s (it came out in 1927; DIY radio kits e.g.
made use of it).
the space-charge grid was also found in some equipment for measuring
extreme low currents with electrometer tubes. the low plate voltage
reduces the probability of ionization as a source of grid currents
and, therefore, rises the input impedance (typical currents are of
the order of 10^-14 A).
some examples of such tubes are the T 113 and T 116 by Telefunken,
the 4066 by Philips/VALVO. another SC tube is the US type 12K5, i

don't know of any applications. i've heard of 2 more US types but never saw them: D-96475 (earlier type 7567A) by WE, and FP-54 (or 5740) made by GE. don't know whether it's possible to get any of these tubes today. i'm wondering where the strange typing scheme ("FP-.." and "D-...") came from and what it means...
hope this was helpful to you.
ciao -
Herbert

Hi,

I'm looking for a spare set of 3-500Z's for my L-4B. Pulls are OK if
they have full output. Let me know what you have and the price.
Tubes are subject to my test.

73, Bill, K3PGB

fb Herbert

this is very interesting. but it seems that those space charge valves has not found the practical use they deserve, might be because somebody else won the war, and made a vacuum for several years for technical developments other than for science applications.

I also found one application for RV12P2000 on +18V anode voltage with heater reduced to 9V using some positive grid voltage, this was a 0V1 receiver made by an amateur after the war, some local amateur mentioned having seen this technique mentioned, and I draw a circuit diagram for it for publication

send me an email if you are interested to see it as a gif file, but the only text is in Norwegian (it is only some notes everybody can write when input is zero, but output need to be more that that).

Seems that you have much information, I don't have too much, got a better circuit for K�ln E52 from KB9OLM today, otherwise one must go to DL6VW or read the books by Fritz Trenkle and Hans-Joachim Ellissen, tonight discovered the PeilA70k and DF unit for KwEa.

Believe RE074d was used in much early Wehrmacht equipment, also had a large frequency control unit made by Lorenz for a broadcast station, the only civilized valve type was STV280/80, I kept many of these

Seems I have to make a home page one day with circuit diagrams for ex-German equipment, would also include some R.L. Drake receivers and other technical information and modifications which it seems to be too little of elsewhere

Message-ID: <8as2v7naq1@news3.kcnet.com>
Source record: 69515

2 SB610 monitor scopes, with manual, cases, etc. These need re-capping, and a little tlc. Good winter night projects to restore and get running.... $60 for the lot.

4347. FS Monster SWR Meter(s)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-16 00:00:00 UTC
From: Webcpa <webcpa@netscape.com>
Message-ID: <8as32dnav1@news3.kcnet.com>
Source record: 69516

This is a neat homebrew but looks professional SWR meter with neat stuff. Is built in 12x9x9 cabinet painted in style of Heathkits (apache, mohawk, etc) - has two 7" meters (yea, big ones!) plus some switches and a light. A neat homebrew job that looks professional. You need this toy. $ 40

4348. FS Heath SB Series RTTY converter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-16 00:00:00 UTC
From: Webcpa <webcpa@netscape.com>
Message-ID: <8as36b$nb3$1@news3.kcnet.com>
Source record: 69517

And you probably thought they didn't make one of these, didn't you? You were right. But some enterprising soul built the Handbook RTTY converter in a
Heath SB series box, complete with heath type knobs, and, well, there you have it. A beauty to behold. $ 50

1. Antenna tuner from the ARRL handbook. Has a home-built cabinet, with
a funky little meter and some nice construction. 200 watts, maybe. The parts
alone are worth more than this: $ 40

2. Antenna relay box, with a heavy duty 110v DPDT relay, coax connectors,
an on-air light, great for older BA's $ 20

3. Homebrew harmonic filter (insert between exciter & linear so, for
example, you don't amplify your
21 mhz harmonic when doing your 40 meter thing) 6x6x6 case + switch for
80,40,20,15 meters...Lots of parts , $ 20

Source record: 69519

Here it is, complete and ready to go with all cables, original manuals, etc:
Built by an engineer, in storage for a long time. They fire up and run, they
look beautiful.
SB-101 transceiver + hp23 power supply
SB-620 scan-adaptor
SB-610 monitor scope
SB-630 console w/ "digital" clock (really analog), swr & phone patch
SB-600 speaker
HD-10 keyer & paddles
HB-15 SWR meter

Complete matched set. $ 450

FS SWAN 350 (loaded)
FS Swan 350...410 remote VFO...vox...selectable upper and lower sideband...calibrator...speaker pwr supply...rig is a real beauty..front panel is flawless...case is beautiful...chassis is free from anything...high serial# near the end of the line.
The 410 remote vfo has a paint scuff on the right side...I placed my qsl card over that area...front panel of the vfo is perfect...pwr supply & speaker is also beautiful...comes with the original manual.
I operated this station for 3 years without any problems....occasionally I would have to spray the volume control with DeOxit cleaner......power output is over 200 watts key down on cw and over 400 watts on ssb...$300 plus shipping...depending where ur at it could run as high as $40 UPS...equipment is heavy.
If you let this rig warmup at least 45 mins..its as stable as a rock..trust me.
Reason for selling...my 50`s station is taking up all my room.....tnx

>glow if nothing else. Anybody out there using an 803 for anything?
>

Tom,

The 803 was the final for the GO-9 military transmitter. I used one of those back in the late 50's. That's my only experience with it, but it always looked to me like a tall 813. In the GO-9, it produced about 140W of RF.

From:
Subject: Manual/docs on National RCK-N

Doug - the RCK isn't Navy issue, as I recall it is a Civil Airways
Administration receiver. One way to tell: does it have a C.O.N.S switch?
If so, it's a CAA receiver. I sold one, with manual, to an aviation museum
in colorado last year. Maybe you could track down the museum and get them
to copy the schematic.

IIRC it is just like an NC100 except it has a CONS circuit.

Date: 15 Mar 2000 23:22:50 GMT
From: jimmoci@aol.com (Jim Moci)
Subject: TRADE my JOHNSON500 for your???

Before I put this thing up on Ebay I wanted to see what I could get in trade for it. I have a Johnson 500 RF deck. No power supply/modulator. It has some scratches on the front and around the corners but its not too bad. The Cabinet has been glass beaded and powder coated with a very tough wrinkle finish and is ready to be sprayed in Johnson Maroon. The inside is in nice shape and appears totally stock. I always intended to rewire my 4-400 modulator/power supply and make an overkill AM rig out of it but I just have too many projects and not enough time. I am looking for something I can plug and play that is exceptionally clean. I would prefer a Ranger, Valiant, Collins 32V, B&W 5100 or other super clean Plate modulated transmitter. I am also looking for a KWM2 or 2A. You guys know what this thing is worth and I know what other clean boatanchor rigs are going for (alot) so lets not insult each other. I will be entertaining offers till next weekend. If nothing catches my fancy it will be available on ebay.com

Tnx,
Jim

P.S. For those who are not familiar with this transmitter it is a 4-400 transmitter with an 811A modulator. Johnson did not make many of these and they are pretty scarce. The power supply/modulator was a seprate unit that sat on the floor. Many power supplies did not make it thru the years (including this one) and alot of hams would build their own that exceeded the specs of the Johnson original. There are a few of these rigs on 75 and 40 meter AM and they sound great. In stock form they are 500 watts input (approx 375 out) and with a beefier supply/modulator they will do more. I have had a few emails asking me the value of the unit. The last few that I have seen sell on the net have gone for $1400 and $1500. These were complete units. I feel this one is probably worth about $750 in its current state. The deck is working and has been tested on another hams working PS/Modulator. It is in average shape and is fully restorable and it comes with the original manual.
Tnx for reading, Jim

Subject: Drake TX4 Probs

I am having serious probs with my new (old) Drake transmitter. I put it
online abt 1 week ago, and its output has gradually faded from abt 50 watts
(as measured on my MFJ 941E transmatch) to almost NONE!!! What could be
wrong? Are my finals kaput? This seems to have been a gradual problem, but
today when I fired 'er up, almost no output at all. Please help!

Yes, DJ2VN, I found the info in "Technical Topics Scrapbook 1990-1994" which
had some further info from Dick Rollema PA0SE who built a radio using two

DAH50s in 1940 which was published in the Dutch magazine "Radio-Express". He also mentions building radios using the A441. There is also a simplified circuit for a 2-terminal oscillator using the A221 space-charge-grid pentode.

From: "Lane Ku7i"
Subject: Modified SB-220 $625 shipped

This is a real workhorse of an amp. Recent procurement of a homebrew 4CX1500 amp forces the sale of this gem.

Modifed with the following:

1. Change of tuning dials from 1:1 to 6:1 reduction with vernier drives.
2. Back to back meter protect diodes.
3. Power supply diodes, bypass capacitors and equilizing resistors have been replaced.
4. Placed diode accross main T/R relay to increase relay life.
5. Placed 200 ohm dropping resistor in series with relay to protect contacts.
6. New T/R relay.
7. VHF parasitic suppressors installed on both the tube anode side and the cathode side.
8. Installed HV fuse resistor to replace choke in HV line.
9. Grid fuse protection using Rich's (AG6K) resistors and capacitors.
10. Cooling fan rebuilt. This baby is QUIET and moves a LOT of air.

I have notes on all of these mods as well as the published info that AG6K includes with his kits. This amp works better than new. The ONLY reason I am selling this is because of the new HB amp I just picked up. I will also include a copy of how to add 160 meters using AG6K's method. Not difficult to do.

The plate voltage on this amp idles at about 3100 and fully loaded at 1300 watts out drops to about 2600 or so. You can wire the amp for 120 or 240 but I recommend 240. Cosmetics are really nice, about an 8 to 8.5 out of 10. There was a Drake low pass filter bolted to the top of the case and as a result there are four non-original holes in the top of the cabinet.

This amp covers 80 to 10 including WARC. About 100 watts of drive for 1250 to 1300 out on 80 to 17 and a little less on 15, 12, and 10 meters. There are not seperte band switch positions for 17 and 12. Use the 15 and 10 meter band switch postions for those two bands. Use your auto-tuner is driving it with a solid state rig (on 17 and 12).

Have original manual and copies of all of the mods. The amp works PERFECT. Tubes are Eimac and of course full output.

Price is $625 shipped lower 48.

I have to put up with wall-to-wall right-wing dickheads on the radio, not on a newsgroup! Only members of the aforementioned dickhead group, supporters of the party that takes in twice the money that the Dems do, would have the temerity to use fund raising to beat up the Dems. Your party and your pols are, and always have been, the party that advances the interests of rich people as against the poor and middle class, and The Repubs reward them handsomely and continuously for their loyalty.

You know the particularly extreme examples as well as I do. Everyone does.

So put a sock in it!

Date: Sat, 4 Mar 2000 09:52:04 -0800 (PST)
From: radiomuseum@webtv.net
Subject: QUESTIONS: Johnson Desk KW - Bias & Screen Mods?

Hi all,
I'm in the final stage of a Johnson Desk KW restoration - (that is,
getting it to work correctly!) SN is 100280, so it is about the middle
of the production of the 402 (or so) desks. The bias resistor network
and the screen regulator chassis differs from my schematic/manual, which
is dated 1959. The bias network has eliminated R214 & R215 and has
changed the value of R208 from 100 ohms to 3K ohms. There are also
changes to the wiring of the pots for adjusting bias and screen current.
It is obvious that these are amateur changes because of the splices in
the harness that are covered with electrical tape. IS anyone aware of a
published mod (Johnson or not) that involved the bias network?
ALSO, the screen regulator chassis sould have a closed-circuit jack to
allow screen current measurements. My reg. chassis has a binding post
and ground connectors, which would suggest that screen voltage would be
measured rather than current. HAS anyone seen this as a mod or is this a
Johnson upgrade that didn't make it into the manual?
THANKS in advance for any information. E-mail or post okay.

>were ham bandspread only. Anybody know?
>
Hello Dan,

What you have is the SWBC version of the NC-183. National made special bandspread dials for a number of its receivers of that era. It wasn't a mod - the receiver was built that way. Relatively few were made - I've never seen one in person in 32 years of hamming. I only know about them from old catalogs and magazines. I don't know if the only change is the dial, or if there are additional electrical changes in the receivers.

They also made rack mount versions of a few, like the NC-183.

I'd guess that having such a rare model would raise its value. Bet there are some collectors who would love to get there hands on it, if you don't want it!

Subject: ---------FS: BIG HV transformer!---------------

(2) for sale- 4000 VAC with a center tap- 2.1 amps CCS, 175lbs, see pic @
http://members.aol.com/jimmoci/trans.jpg Yes,thats a 3-500Z as a reference

for
size in the pic. These transformers are very big and have alot of duty
cycle.
They are removed from 5KW HF Jammers used by the military. They have
multiple
taps from 208VAC to 240VAC so voltage can be changed + or - a couple hundred
volts to suit your needs. It also has a center tap. $250 each. They weigh
175lbs each so pick up near Philly is required. I will be at he Trenton/DVRA
Hamfest and the Baltimore/Timonium Hamfest so I can meet someone there with
them also.
Thanks for looking,
Jim

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,sci.electronics.basics

I've been given a Heathkit RF Sig Gen IG-102 which is a little worse for wear.

It should have two valves but one is missing and the other is broken. Lots of shards of glass inside the case. From the bits I have been able to piece together I think it may have been an ECC81.

Someone has also been desoldering some of the capacitors inside, whether to try some sort of repair or to rob them for a project I can't say. I don't think any are missing just disconnected at one end. Otherwise all the coils appear to be in place - I should say I can't see where any are missing. The power supply appears OK.

Can anyone let me know what the valves should be and is there a schematic available anywhere on the WEB for this?

Tom.

[Snip: Much interesting info on space-charge valves]

The Radio Society of Great Britain "RadCom" October 1991 had some info
by a Dutch amateur P.Bakker on using modern pentodes as space sharge
tetrodes. I quote part:
"This turned out to be possible provided that the control grid was
connected to the cathode, the screen grid used as a space charge grid
and the suppressor grid used as the control grid"
It would be interesting to do some experiments myself.

From: cartercook@aol.com (CarterCook)
Subject: WTB: Receiver power transformer

I need a power transformer for an old receiver I'm refurbishing. The secondary
should be about 100V either side of center tap. Filament voltage(s) and current
are not important since there's plenty of room in the case to mount an extra
fil xfmr. Anyone got one they could part with?

The orientation pin is just part of the plug. The true seal is futher
inside. The crystal is sealed in a glass envelope. Cracks or breaks in
the bakelite plug are not critical.

Subject: Collins KWM-2 SB's Needed

I can supply you with a copy of all S/line bulletins including the KWM-2
and 51S-1
for $40 which includes shipping. The book is xerox copies and is about 1
inch thick.

You can also get a compendium from Electric Radio for $49.00
Theirs is loose leaf, mine is metal bound so it lays flat.
Let me know if you are interested. I have 6 available so no hurry.

You can use PL-68 which is used on Collins S line and KWM2's. This PL-68 is
probably easier to get.
Good luck.

Subject: FA: Collins 516F-2 Power Supply

Here's a really nice winged 516F-2 - last 24 hours of auction:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=278260043

.
deck. No power supply/modulator. It has some
scratces on the front, and around the corners. The Cabinet has been glass
beaded and powder coated with a very tough wrinkle finish and is ready to be
sprayed in Johnson Maroon. The inside is in nice shape and appears totally
stock. I always intended to rewire my 4-400 modulator/power supply and make an
overkill AM rig out of it but I just have too many projects and not enough
time. I am looking for something I can plug and play that is exceptionally
clean. I would prefer a Ranger, Valiant, Collins 32V, B&W 5100 or other super
clean Plate modulated transmitter. I am also looking for a KWM2 or 2A. You guys
know what this thing is worth and I know what other clean boatanchor rigs are
going for (alot) so lets not insult each other. I will be entertaining offers
till next weekend. If nothing catches my fancy it will be available on it @
ebay.com
Tnx,
Jim

From: "Gary - KJ6Q"
Subject: FS - TS-780 2 meter, 432 multimode...

As nearly as I recall, early 90's, and sensitivity spec is:

SSB = .2 uv for 10db(S+N)N
FM = 1 uv for 30 db (S+N)N
.2 uv for 1.2 db SINAD
Apparently, the spec is same for both 2 and 432

From: "Ed Carpenter"
Subject: FS 4-400A tubes 2 Eimac, 1-Penta

Total of(3) 4-400A Tubes for sale. The Eimacs were part of an unfinished
amp(estate) and the PL was packed in an old box.
The Eimacs show a bright red lettering usually denoting little, or no
usage. The PL is marked in yellow that has not darkened.
Filaments check continuity, but I have no way to test them in an RF
situation.
Guaranteed to be usable, if you can convince me that you can test them
properly.
$135 for all three, shipped CONUS or USA zip code.

From: "Lane Ku7i"
Subject: FS: Hammarlund, Heathkit

I have a VERY nice looking HQ-145-A rcvr. Fully functional 10mhz and below. Above 10 mhz, when the second I.F. kicks in the rcvr sensitivity is low. Cosmetics of the front panel are excellent, an easy 8 to 8.5 out of 10. Have good copy of manual with schematics. The top of the cabinet has had some holes drilled into it (grrrrr!!!) for access to the I.F. transformers. Other than that the cabinet is real clean.

Sell in as-is condx for $105 shipped lower 48.

Also have a Heathkit 2036 2 meter mobile rig with the matching supply. The supply needs a new 12 volt regulator. When the supply went out it took the radio out too so it does not work. have all the manuals and the touch tone mic. This is the popular 2 meter mobile rig from the 70s with the thumbwheel switches on the front for freq selection. Has +/- 600 khz or simplex modes. FM only. normally rated at 10 watts out.

$30 shipped lower 48.

That's a form of Tungar bulb.

The name derives from the use of a Tungsten filament and Argon gas. It's a
low-voltage, high current diode used mostly in battery chargers of the '20s.
Copper-oxide and selenium rectifiers eventually replaced them, but some were
still in use as late as the 1940s.

Might have some value to collectors and restorers.

From: "Mark Bell"
Subject: SX-111 "Mystery Tube"

Folks --

About a year ago I did a clean up of my SX-111 which had set idle for more
than 10 years, and it's working fine.

A rather large hamfest is coming up in a few weeks, and I wanted to replace
the remaining "Sprague Black Beauty" caps in the unit. After carefully
examing the SX-111 and comparing it against the manual I downloaded from
BAMA, I've found I have an additional tube in my receiver!!

The "mystery" tube on my chassis is a 6BY6, and it's located at the back of
the chassis where (according to my manual) C69 should be (C69 is the

multi-stage can cap). In my receiver, C69 is located on the underside of the chassis directly over V7(5Y3GT). The wiring, socket, etc for my "mystery" tube looks to be original. The C69 cap itself is a replacement, but the wiring to it looks original. I doubt C69 was originally at the location of my "mystery tube" as the aperature would have to be bigger, and the chassis metal is not patched.

I suspect there may be different versions of the SX-111, and this is alluded to in the HCA product database. I also suspect the manual I download is for a version of the SX-111 different than mine. I've been unable to find any further detailed references to different versions of the SX-111.

Any help will be very appreciated.

From: "Mark Bell"
Subject: SX-111 "Mystery Tube"

Thanks Young --

I did some additional searching today, but didn't come up with anything on the web. I rechecked the serial number
papers attached to the SX-111, but didn't see anything. It was only after I had slid the chassis back into the cabinet
that I noticed the (small) tube diagram on the inside cabinet side. I took a look at it and it does say Mark I !! I didn't know until
today that there were different models of the 111. Based upon your comments, I assume the original was just the
SX-111, and the later version was the Mark I (as opposed to the original being the Mark I and the later the Mark II).

Thanks again...

BTW, if any of you readers have the updated manual, please let me know. Of immediate interest is the value of the
two molded paper caps attached to pins 2 and 6 of the 6BY6, I'd like know them. I believe they're 0.22uF and
0.18 uF, but the colors are rather faded.

Hi Gang...

First I would like to thank everyone that responded to my query... The consensus says that it is a RBM... There were too many responses to answer each individually so please consider this a big thank you... The receiver and power supply have found a new home...

Take care and have fun...

```
For anyone who is interested in
restoring/collecting/operating military radio equipment,
there are two radio nets on the U.S. West Coast if you
are in that area:
-----------------------------------------------------------------
The armyradios mailing list discussion group net:
Saturdays 10:00 AM, Pacific Time on 7296 KHz, Upper Sideband
( http://www.onelist.com/community/armyradios> )
Note also that the armyradios mailing list has about 212 subscribers
and are scattered throughout the U.S. and Europe, along with some
members in Asia and Australia..

Further info on the armyradios mailing list can also be found on the
following website: <http://www.tactical-link.com>
-----------------------------------------------------------------
The Military Radio Collector's Group Net:
Saturdays 9:30 PM, Pacific time on 3980 KHz, AM or SSB

Thanx

I have forsale a complete Drake station consisting of a T4X,R4A,MS4 & AC4
power supply.I also have the original manuals and inter-connect cables.this
is a nice looking station all but for some cutouts on the bottom cases near
rear where the previous owner had rca and bnc jacks so he could run
inverters and transverters. I have since removed and restored to original
electrical condition. I have also removed front panels ,knobs and cleaned
the vfo dials.they do look nice. I am asking $350 picked up in Phila. also
when radios are next to each other on table you cannot see the cutouts,I do
understand Drake still has bottom cases available. John w3ayt@arrl.net
also, I may ship if I don't get a local buyer but would probably run about
$40 u.p.s.

4445. Hallicrafters SX-28 & SX-4? parts for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-18 00:00:00 UTC
From: Paul Lethbridge <olracp@stargate.net>
Message-ID: <P2UA4.730$Sw6.311356@news.sgi.net>
Source record: 69425

I have the following Hallicrafters items for sale:

Front Panel for SX-28: In black crinkle finish. No nasty holes drilled for bizarre upgrades, but definitely need to be stripped, repainted & re-lettered. If you've been living with a bodged front panel then this could be for you! $25.

Cabinet as used on SX-42, SX43, Heavy steel. Black, with silver/aluminum color lid.
Extremely nice condition, even has those square rubber feet intact. My SX-28 has been living in this cabinet, but I found an original SX-28 cabinet and she's moving house! $40.

All prices are negotiable.
Both items are located near Pittsburgh, but will ship for (additional cost) if required.
If you have an interest then please contact me via e-mail:
olracp@stargate.net

Kind regards,

Paul.

4447. Simpson Scope Help! Tube Assistance Please!!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-18 00:00:00 UTC
From: Gregg Schwabauer <griggy@cyberhighway.net>
Message-ID: <38D40E17.D21A526@cyberhighway.net>
Source record: 69427

I just acquired a Simpson model #466 "Handiscope" oscilloscope and there are a couple of problems I need help with.

1) Can anyone help me with a manual, schematic or component information? The usual online sources don't have anything. I will pay any reasonable costs. 5 of the 8 tubes are unlabeled.

2) There are 2 RCA Radiotron tubes in this thing that are not numbered. On the base there is printed "60-04" but I can find no information on such a tube. Is there such a thing and if so, what are the tube characteristics?

Any help or information would be appreciated.

Message-ID: <38D45148.10B8@win.bright.net>
Source record: 69433

I have a nice TR4 with the RV3 VFO and AC3 power supply for sale.
Physical shape is about a 7/10...front panels are flawless, some
corrosion on the TR4 chassis, some scratches on the top of
both cases. Electrically it's perfect as far as I can tell. It makes
full power (175-200w) I've owned it for about 10 years and recently
re-capped and aligned it. I would be happy to QSO you if you'd like to
hear it. Sell as complete set only.
Asking $275 plus shipping from 54725. Includes original manual and hand
mic.

4464. Auction Prices Realized updated

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-18 00:00:00 UTC
From: neil <neil@aade.com>
Message-ID: <38D2FD0F.5072D570@aade.com>
Source record: 69475

Just updated my ebay prices realized web pages.
http://www.aade.com/hampedia/prices2.htm

NOTE:
ebay keeps completed auction data for 30 days. If I fail to update that often I miss some items. That may be why you, for example, know of a higher maximum or lower minimum bid that you see on my lists. This has little effect on the average price, in fact extra ordinary highs or lows tend to skew the average. The average price is the important data as it is hard to compare your item with the item that sold for the max or min. You have no idea how "superior" or "inferior" they may have been. For example I once saw a "New in Box" National NC500 sold. This radio was made about 30 years ago and had never been used. It is doubtful that no matter how good yours is it is probably not be that good.

Dick asked:
>Jeff wrote:

>> Note that the 1866 Trans-Atlantic cable was an unbroken length of
>> 3700 miles with, of course, no battery relays. As a test, Latimer
>> Clark used a battery made from a thimble filled with acid; a successful
>> signal was received. (Coe)

>Jeff, wasn't the first cable incinerated by too strong currents?
>Dick BK

Hi Dick -- sorry for the delay in answering your question. No, currents played no role in the repeated failures in laying the first cable. Here's a brief summary of the agonizing work Cyrus Field carried out:

~1850: An English surgeon discovers gutta-percha, a juice from rubber trees in Malaysia; in England he patents its use; becomes a water-proof insulation for wire.

1852-1853: USN conducts undersea survey of waters between Ireland and Newfoundland; undersea plateau discovered; bottom samples reveal no swift currents to cause abrasions to cable.

1854: Field organizes NY-Newfoundland-Ireland Electric Telegraph Co.; Morse given one-fourth of the stock shares to act as advisor; Fields chosen as chief engineer.

1856: Cape Ray - Cape Breton cable laid; $1M spent, which depleted capital.

1856: Field organizes Atlantic Telegraph Co. of Great Britain (US Congress passes bill to provide support, too); two US and two UK ships to participate.

8/6/1857: Cable laying begins from Valentia, Ireland; after 360 miles, cable parted due to high winds / rough seas; more capital raised on both sides of Atlantic for another expedition; this time, two ships begin from mid-ocean -- one sails east, other sails west; cable breaks several times -- recovered each time, ends spliced, voyage continues each time.

7/17/1858: Each ship reaches shore -- Ireland-Newfoundland finally linked by undersea cable; clear reception begins to fade; by August, cable is dead; Field accused of fraud; investors pull out; Field has nervous breakdown. (Later, it was discovered that the gutta-percha rubber

insulation had melted in several spots due to the manufacturer leaving cable out in the sun at factory -- the order explicitly stated the cable should be kept out of the sun because gutta-percha melts easily.)

1862: Field goes back to England to find more investors; investors and friends hide from him; UK government declines funding due to loss of money from their failed Red Sea cable.

1865: SS Great Eastern leased to Field; new investors found.

7/1865: Great Eastern with Field aboard sets out from Ireland; during first 10 days, there are 4 signal failures; each time, cable reeled in, fault found, splice made, ship continues; on 8/2/1865, only 600 miles from destination (Newfoundland), entire load of cable slips into ocean and is lost.

1866: New company organized with new investors.

6/20/1866: Great Eastern and Field leave Sheerness (manufacturer's location) with 2375 miles of cable aboard.

7/12/1866: Ship leaves Valentia, Ireland; crew is constantly testing cable with Valentia operators during entire voyage; no breaks this time, no signal losses.

7/27/1866: Cable is landed at Heart's Content, Newfoundland; works perfectly.

8/9/1866: Great Eastern and Field get underway to search for lost 1865 cable; find cable 600 miles east of Newfoundland, grapple the end, bring it aboard; Great Eastern calls Valentia on recovered cable -- cable found to be working fine; recovered 1865 cable is splice to remaining cable aboard ship, and ship heads back to Newfoundland; now there are two working Trans-Atlantic cables; Engineer Clark (Ireland) asks Newfoundland to connect both cables together at their end -- unbroken 3700 circuit -- Clark makes an acid-filled silver thimble battery for the test; test is successful.

That is from Coe's "The Telegraph."

I recommend McDonald's "A Saga of the Seas: the Story of Cyrus Field and the laying of the First Transatlantic Cable," call number TK5611.M3, (1937).

You might be right---there weren't too many coaxial connectors on WW II
military radios until late in the war.. The earliest mention I could
find was in a timeline:

1936 - - First coaxial cable installed between New York and Philadelphia
made available for multi-channel
telephone tests. The coaxial cable was demonstrated on November 30th
when Frank B. Jewett, president of Bell
Telephone Laboratories talked with officials of the FCC in Washington.

Source record: 69486

FS SWAN 350 (loaded)
FS Swan 350...410 remote VFO...vox...selectable upper and lower sideband...calibrator...speaker pwr supply...rig is a real beauty..front panel is flawless...case is beautiful...chassis is free from anything...high serial# near the end of the line.
The 410 remote vfo has a paint scuff on the right side...I placed my qsl card over that area...front panel of the vfo is perfect...pwr supply & speaker is also beautiful...comes with the original manual.
I operated this station for 3 years without any problems....occasionally I would have to spray the volume control with DeOxit cleaner......power output is over 200 watts key down on cw and over 400 watts on ssb...$300 plus shipping...depending where ur at it could run as high as $40 UPS...equipment is heavy.
If you let this rig warmup at least 45 mins..its as stable as a rock..trust me.
Reason for selling...my 50`s station is taking up all my room.....tnx

Subject: 110 volts how to?

Moggy has the simplest way. Check your current needs, if an off the
shelf won't work, find a commercial electrical supply and they will have
them in the few hundred watts to several KW range.

.
will handle the load..hope this helps.Gene

> Thanks much

Andy, you just need a 'bucking' transformer. Figure the load current,
and what drop you need, then get a 'filament' transformer of that
rating and hook it up to buck the line voltage. For example, lets say
the line is 125V and the load is a radio taking 1.5A. You need to drop
15V at 1.5A, so get a 12 to 15v at 2A transformer. Connect the primary
across the line in the usual manner, and connect the secondary in
series with the line to the set. You must correctly 'phase' the
secondary so it subtracts from the line voltage. Simply connect it up
and measure the output. If it is 140V it is phased wrong. Reverse the
two secondary leads and you should see 110V.
There are more tricks you can do to fine tune it, but this is the
basics.

Subject: 12BY7A vs 7054

I have bought recently in Ebay a couple of 7054's. They said they are
industrial equivalent of the 12BY7A, but I am not sure, and I dont have
any mean to check it.

Disregarding performance of the tubes, I dont know if they are pin
compatible, they look rather much alike from the outside, but the price
ratio is 1:4 so maybe they are not so much equivalent after all.

Any help????

Please post, fake Email is anti spam

> Please post, fake Email is anti spam

THe 7054 is *kind of* equivalent to the 12BY7. The 7054 was a 12BY7, built
for 12V mobile use so the filament is different. TThe 12BY7 has a tapped
filament which the 7054 *doesn't* have, and the 7054's filament voltage is
13.8 +/- 1.2 V. Also, the 7054 is rated for 5 watts plate dissipation vs
6.5 for the 12BY7.

If your radio has a 12V filament supply vice a 6.3V, it would probably work.
If not, guess they're eBay fodder!

From: KRG
Subject: 12BY7A vs 7054

Pinouts are similar, except that 12BY7 has pin 6 as a filament center tap so it can be used on 6.3 volts, too. My GE tube book shows the 7054 as an RF Pentode with a 9GT socket, 13.5 v @ .275 A. filament, absolute max values of: 5 watts plate dissipation; 330 plate volts; 180 screen supply volts @ 1/2 watt; In a Class A amplifier, typical values would be: 250 v.@ 19ma plate, 150 v.@ 3.5ma screen, Rk=120, Rp approx. 100,000, Gm= 11,500 microMHOs. Input, output and grid-plate capacitances are the same as the 12BY7, but the BY7 has sharp cutoff characteristics not shown for the 7054. Using it in a circuit designed for a 12BY7 would probably give you disappointing results. But hey, when I was a kid....

Subject: Atlas 350XL parts/info

Any Atlas 350XL experts out there?
Just got one that didn't transmit or receive.
Got the receive working fairly well but can't get much signal gain
thru the IF circuits on transmit. So far, I haven't been able to
'scope out a failed component or stage, just the fact that
overall gain seems to be down.

I suspect a problem in my PC120C first mixer/balanced modulator PCB.
My unit is an early one and the pcb is full of rather crude factory
modifications. It seems like the later units had the PC-150 circuit
board installed for the same functions.

Any spare PC-120 or PC-150 circuit boards out there?
Other spares available?

Anyone have a listing of original factory mods to this rig?

From: no@telocre.as
Subject: FT-101ZD mods?

I own one since 1982, MKIII . It is a great rig, a poor man's Collins.

The noise blanker is the best I have ever operated, Processor is true RF.

Width control with 2 cristal filters, allways cascaded.

Notch is audio only

I have bought ALL the booklets from fox tango, but never needed to modify anything.

I have the whole line, scope, L.A., speaker, transverter, and 3 VFO!! FM, and even the 12V power supply.

The antena coupler FC901 is a joy!.

Japanese have a higher pitched voice than caucasians, so I would only recomend to use a good microphone, like shure 444 (have one) but I use it with a Heil mike. I have a CW filter too

The MKIII has a known problem, the contacts in the relay in the clarifier, that is the reason why I have 2 external digital VFO (just in case) I have another analog external VFO with same drift problem.

So if you manage to take hand on a digital VFO, you will have a wonderfull rig, specially in the low bands, because of the tuned circuits.

After the FT101 MKIII I bought a FT-ONE and a FT-980, but I still use the 101

I have aligned some 10 FT101ZD, and ALL gained a lot, about 10dB in gain, by the way the S-meter is VERY well calibrated, you can check it

with the attenuator.

The 12BY7A has to be of the best quality you can get, I have best
experience with NEC tubes. Next G.E. tubes, but some G.E. had too much
gain and had a tendency to oscillate (but like a Bronco excellent when
adjusted), most of the cheap tubes did not have a clear "hump" when the
preselector was tuned.

Finals last a lot, (I still have the originals) but the 12BY7A burns
out, so keep some on hand. An old tube will produce a lousy "hump" when
the preselector is tuned in "tune" position.

Subject: FT-101ZD mods?

Dont forget the P.A. fan, it was an extra!!!

the 12BY7A is very enclosed, maybe that is why it burns out, I have
never done it, but allways wondered about cooling it in some way.

I allways have the pilot lamps very undervolted, the orange colour is
nicer (I think) the lamps last longer, and the plastic does not burn
out.

From: David Stinson
Subject: More Immorality in High Places

What's going on? Against all odds - and despite the best efforts of the
Clinton-Gore Justice Department - Al Gore's friend and campaign cash
collector Maria Hsia (pronounced: "Shaw") was convicted on Thursday of
all
five felony counts stemming from her and Gore's 1996 campaign fundraiser
at
the Hsi Lai ("She - Lie") Buddhist Temple in Los Angeles.
Networks take a nap. But the three network evening news shows - with an
entire afternoon to prepare - failed miserably to uphold their basic
obligations to inform the American public of this scathing story about
the
vice president. On ABC's "World News Tonight," Peter Jennings spent just
19
seconds on the story. On CBS, anchor Dan Rather gave the story a total
of
23
seconds. And worst of all, Tom Brokaw didn't even utter a single word
about
Gore and his convicted crony.
On top of that, the Senate Government Affairs Committee had identified
Hsia
as "an agent of the Chinese government" and even Democrat Senator John
Glenn's highly partisan report had called her a "consultant" to "Chinese
government officials."
Imagine if a close associate of a Republican presidential candidate was
branded an agent of a politically volatile government and then convicted
of
funneling illegal campaign cash to that candidate! Is there any doubt
this
story would have led every nightly news show?
Protest. Let the networks know there is a quiet majority who cares
about

their democracy being put up for sale in a place of worship - all for
the
sake of a brazen and illegal scheme to launder campaign cash through
impoverished monks and nuns. Please send a message to the three
networks -
their e-mails, phone and fax numbers are at the bottom. Won't you
please
forward this e-mail to friends? Also, call radio talk shows and write
letters to the editor of your local newspapers. We must talk this up in
Internet chat rooms - and around every water cooler, lunchroom,
classroom
and union hall across America.

Shareholder meetings. General Electric owns NBC, Westinghouse owns CBS
and
Disney owns ABC. If you own stock in these companies, why not find out
when
their shareholder meeting are - and make your voice heard?

From: "Mike"
Subject: New All Radio Auction Site - Electron Bay

New all radio and electronics auction site.
By radio enthusiasts, for radio enthusiasts.
No insertion fees! give it a look and bookmark it at:
http://www.electronbay.com/

.

Date: Sun, 05 Mar 2000 23:02:01 GMT
From: "Lane Ku7i"
Subject: price reduced SB-220

AG6K modified SB-220. Full output. Now reduced to $585 shipped lower 48.
Will take an HQ-170-A, HQ-180, or 51J-4 in partial trade.

Real performer of an amp. Recent procurement of a homebrew 4cx1500B amp
forces sale of this gem.

Modified with the following:

1. Change of tuning dials from 1:1 to 6:1 reduction drives.
2. Back to back meter protect diodes.
3. Power supply diodes, bypass caps and equilizing resistors replaced.
4. Placed diode accross NEW T/R relay to increase relay life.
5. Installed 200ohm dropping resistor in series with relay coil.
6. VHF parasitic suppressors installed.
7. HV fuse resistor installed to replace the old HV choke.
8. Grid fuse protection using AG6K's resistors and caps.
9. Cooling fan rebuilt. Now very quiet and moves LOTS of air.

Have data and notes on all of the mods that were made. Plate voltage at idle
is 3100 and drops to 2600 fully loaded with 1300 watts out. Full out on
80-40-20 and slightly less on 17-15-12-10. Use auto-tuner with solid state
rigs if using the amp on 17 and 12. Use the 15 and 10 meter bands
respectively.

This is a factory modified SB-221 (SB-220 bandswitch and tuned input). No
difference than an SB-220 except the front panel reads "SB-221" and the 10
meter band switch position is not labeled.

PERFECT operating condx. Amp will be double boxed and shipped seperately
from the tubes which are Eiamc and will also be double boxed. Both items
will travel UPS ground and be insured appropriately.

$585 shipped lower 48. Take HQ-170-A, HQ-180, or 51J-4 in partial trade.

The 6BE6 and 6BY6 have the same grid setup, but the "signal grid" (pin
7) on the 6BE6 has a remote cutoff characterstic. The 6BY6 has a sharp
cutoff "signal grid." The 6BE6 is the prefered tube when AVC is applied
to the signal grid. That is why the 6BE6 is prefered in receiver mixer
circuits. In product detector circuits, AVC is not involved so the
sharp-cutoff 6BY6 works best. The fact that the 6BE6 is a much more
popular tube may be the reason it was used in the later Drake models.
The 6BE6 has no operational advantage over the 6BY6 in a product
detector circuit, it is just much easier to find.

This is the outboard speaker that matches the HQ-170 series of rigs. Front grill looks excellent. Paint chip on left side of cabinet about 1 inch long by 1/2 wide. Different speaker jack has been installed on the rear. Looks good overall. Sounds great. $75 shipped lower 48. US Postal MO ship next day.

From: k8bvj@webtv.net (Jack Bucchieri)
Subject: FS SWAN 350 (loaded)

FS SWAN 350 (loaded)
FS Swan 350...410 remote VFO...vox...selectable upper and lower sideband...calibrator...speaker pwr supply...rig is a real beauty..front panel is flawless...case is beautiful...chassis is free from anything...high serial# near the end of the line.
The 410 remote vfo has a paint scuff on the right side...I placed my qsl card over that area...front panel of the vfo is perfect...pwr supply & speaker is also beautiful...comes with the original manual.
I operated this station for 3 years without any problems....occasionally I would have to spray the volume control with DeOxit cleaner.....power output is over 200 watts key down on cw and over 400 watts on ssb...$300 plus shipping...depending where ur at it could run as high as $40 UPS...equipment is heavy.
If you let this rig warmup at least 45 mins..its as stable as a rock..trust me.
Reason for selling...my 50`s station is taking up all my room.....tnx

From: "Paul Lethbridge"
Subject: Hallicrafters SX-28 & SX-4? parts for sale

I have the following Hallicrafters items for sale:

Front Panel for SX-28: In black crinkle finish. No nasty holes drilled for bizarre upgrades, but definitely need to be stripped, repainted & re-lettered. If you've been living with a bodged front panel then this could be for you! $25.

Cabinet as used on SX-42, SX43, Heavy steel. Black, with silver/aluminum color lid.
Extremely nice condition, even has those square rubber feet intact. My SX-28 has been living in this cabinet, but I found an original SX-28 cabinet and she's moving house! $40.

All prices are negotiable.
Both items are located near Pittsburgh, but will ship for (additional cost) if required.
If you have an interest then please contact me via e-mail:
olracp@stargate.net

Kind regards,

Paul.

4495. WTB: RCA AR-88, CR-88, SC-88 receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-19 00:00:00 UTC
From: jimmoci@aol.com
Message-ID: <20000319104834.06253.00000625@ng-cq1.aol.com>
Source record: 69356

I am looking for an old WW2 RCA boatanchor Receiver. There were a few models AR-88, CR-88, SC-88. I beleive there was a later model called the CR-91. These radios covered the SW bands. If you have any of these or some similar RCA radio let me know price, condition, etc.
Tnx,
Jim

4496. Re: RCA AR-88, CR-88, SC-88 receiver

Newsgroup: rec.radio.amateur.boatanchors

From: Crazy George <munsch@attglobal.net>
Message-ID: <38d4fdb9_3@news1.prserv.net>
Source record: 69357

Jim:
I am still trying to figure out all the model number combinations, but the CR-91 was the Camden built model of the Canadian AR-88LF, with 74 kHz to 550 Khz and 1.6-30 KHz coverage, instead of .550 to 30 MHz coverage of the AR-88.

Subject: ---------FS: BIG HV transformer!---------------

(2) for sale- 4000 VAC with a center tap- 2.1 amps CCS, 175lbs, see pic @
http://members.aol.com/jimmoci/trans.jpg Yes,thats a 3-500Z as a reference for
size in the pic. These transformers are very big and have alot of duty cycle.
They are removed from 5KW HF Jammers used by the military. They have multiple
taps from 208VAC to 240VAC so voltage can be changed + or - a couple hundred
volts to suit your needs. It also has a center tap. $250 each. They weigh
175lbs each so pick up near Philly is required. I will be at he Trenton/DVRA
Hamfest and the Baltimore/Timonium Hamfest so I can meet someone there with
them also.
Thanks for looking,
Jim

From: "D&N"
Subject: Heathkit AR-3 help needed

I can't locate a schematic for the Heathkit AR-3, either on the net, or at our museum archive. I have one for the AR-2. The labels are missing on the back of the AR-3 chassis, so I need to know the purpose of two connections. Just to the right of the power cord, as you look at the rear of the chassis, is a small, porcelain insulated jack. Between that and the noise limiter switch is what looks like a tube socket. I had a working AR-3 several months ago and I don't recall seeing that socket on the back of the chassis. There is a headphone jack to the right of the noise limiter switch. Can anyone identify the purpose of the porcelain insulated jack and that other socket? Also, which is the normal position for the limiter switch, up or down ? Am I correct , that the selector switch should be in the "phone" position for normal operation? I have bridged a temporary set of filter caps and disconnected the original filter can. I'm getting lots of noise but am not able to get any stations. Any help would be appreciated.
Thanks,
Dick

Subject: Manuals for Regency HR-212

Would anyone be able to help me with a manual for a Regency HR-212 rockbound 2m rig? I inherited one, sort of, and would like to get it working. Best info is that it was working when pulled in the early '80's.

I'd be happy with a photocopy of the operating manual, although someday I'll be wanting the maintenance manual too, probably. I'll pay for copy and mail costs.

It would help if you'd reply by e-mail rather than I post. All help greatly appreciated.

From: mongrel
Subject: My new Pye P45

Hey! I have a Pye P45! It was made about 1951.
It is a single-conversion superhet.
It has a nice, big, slide rule dial.
It has a 6" Rola speaker that works, with
one pentode audio out.
The tuning knob has a flywheel.
Condition and cosmetics are good. It looks exactly
like the P28 at
http://www.vintage-radio.com/pye.htm
but the corners of the speaker and display area are
slightly rounded, and the knobs are spaced evenly.

That's all I know. I'm disassembling and cleaning it now.

I have a lot of experience with tube audio circuits.
This is my first tube radio. I think I can reasonably

expect it to "sound good", if the station is clear
and strong. This is often the case here, every day, with
Radio Marti, VOA, and Radio Havana Cuba, and others.
I would like to put it to work, and listen
to it, while I tinker with my other projects, which
I never seem to finish.

Subject: SX-111 "Mystery Tube"

Hi,
The newer version of SX111 has a product detector using 6BY6. Your receiver is a newer one. You can ask around to get the manual for newer version. I think newer one sounds better on SSB, you are the lucky owner. Good luck.

From: dan harlan
Subject: Valiant Mod. Xfmr ???

Hello All,

I got a mod xfmr from an old Valiant and need to
identify how the "Class C" side is wired. I have 4 wires,
2 half's of the winding. Apparently the connection between
the two was the 500 ohm output for external loads.

One part of the "Class C" winding has a green
lead and the other end of that winding has a green/yellow
lead. The other part has two muddy brown leads.

How could I go about "phasing" the two half's
of the class "C" side. I wont need the 500 ohm tap
for my application.

TIA

FS SWAN 350 (loaded)
FS Swan 350...410 remote VFO...vox...selectable upper and lower sideband...calibrator...speaker pwr supply...rig is a real beauty..front panel is flawless...case is beautiful...chassis is free from anything...high serial# near the end of the line.
The 410 remote vfo has a paint scuff on the right side...I placed my qsl card over that area...front panel of the vfo is perfect...pwr supply & speaker is also beautiful...comes with the original manual.
I operated this station for 3 years without any problems....occasionally I would have to spray the volume control with DeOxit cleaner.....power output is over 200 watts key down on cw and over 400 watts on ssb...$300 plus shipping...depending where ur at it could run as high as $40 UPS...equipment is heavy.
If you let this rig warmup at least 45 mins..its as stable as a rock..trust me.
Reason for selling...my 50`s station is taking up all my room.....tnx

From: stinson108@my-deja.com
Message-ID: <8b3af8ulh1@nnrp1.deja.com>
Source record: 69367

I need some insight here from some of you SWAN operators. My present ham shack has no electrical power and I operate from batteries and solar cell. The old 500 now sits idle and I have no DC module to attach to it. Can I wire a plug to the JONES plug so it will operate without the module? Obviously there is no problem with engine intererence or voltage spikes from the batteries. Does the module provide high voltages that make it essential for DC operation? I made one attempt to power it up and got the tube heaters lit and could hear that the audio amplifier was alive, but that was as far as it went. Thought I'd ask some advice here before I got very far into it. Thank you for your consideration. Respectfully, Stinson

I have a bunch of 3-400Z's that I believe will operate just fine in my Drake L4B's. The book lists the 3-400Z when it discusses idling current, etc. Other than a lower dissipation, the tubes look (specifications) pretty much the same. The Eimac/Varian book seems to say the same thing. Any experience(s) out there? Thanks much.

The 3-400Z is a virtual twin is the 3-500Z, the only differnces are of course the lower plate dissipasion, and slightly smaller size, but also, it has slightly higher gain(a function of the closer spacing of parts inside).
Plug in the socket and use it, it might surprise you, how will they do.

4524. Review of my new Pye P45

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-19 00:00:00 UTC
From: "Ralph E. Carter" <carterr@bellsouth.net>
Message-ID: <38D4FA22.3B2F2584@bellsouth.net>
Source record: 69438

Cleaned inside and out.
Changed one filter cap and two dial lights.
Installed new line cord.

The following review should appear pretty routine
to Boatanchor fans:

Performance is much better than expected.
It works so well that, seriously, I think
something must be wrong with my Radio Shack
DX-390, which has served me well, I thought.

NOISE:
The DX-390 sounds like an ocean of raspy hiss
compared to the Pye.

SENSITIVITY:
On the Pye, I can clearly (but not loudly) hear
much, much weaker stations, because the background
is silent. If the measurement is "minimum intelligible
signal", then the Pye is much better. With headphones,
the Pye would be overwhelmingly better.

SELECTIVITY:
At a station separation of 15Khz or more, the
Pye is much better. Strong stations disappear,
without making images all over the band.
At a separation of 5Khz, the selectivity seems
almost exactly the same. But when two stations
interfere, the distortion is simply less offensive
on the Pye.

AUDIO:
The Pye is heaven on earth in comparison.
Bass. Treble with clarity. Silent background.
Tube ambience. Heaven on earth.

A DX CATCH, FOR EXAMPLE:
I enjoy listening to clear programs most of the time.
Here is an accidental DX catch.
I'm in the southeast U.S.
Using an amplified antenna and the 15 foot wire across
my room, I received New Zealand
clearly, but not loudly, at about 17655. At about 0300 UTC!
I heard Radio Japan at about 17830 at the same time.
This is impossible on the DX-390.

NEGATIVES:
On HF only covers 49M, 31M, and 16M.
There are often heterodynes.
It is often simply not loud enough.
No digital readout. I don't mind. I need to adjust the
dial pointer, and would need to align it, to make the dial
more accurate. I is readable to about +-5Khz. The knob is
down "geared" very nicely, and large in diameter.

I don't want to modify this radio.
I've learned what to expect from this simple circuit.
For listening to my usual programs, it is very pleasant.

> DX-390, which has served me well, I thought.

Now that I have the schematic, I see that this radio
has many more tuning elements than I thought! Two cans
that I thought were capacitors were actually the IF
transformers! I told you it was my first radio.
This makes its good performance understandable to me.
Still, it is a very simple circuit, and embarrasses the
DX-390.

I spent many nights searching the bands on the DX-390.
So I fully appreciate this Pye.

There is a good book on the Pacific cable from Bamfield to Australia. I
don't have the info on it here, though. Since it came a bit later, the
technology was much improved over the pioneering work of Field.

Date: 2000-03-20 00:00:00 UTC
From: WA2BAH@webtv.net
Message-ID: <3904-38D649AC-21@storefull-157.iap.bryant.webtv.net>
Source record: 69300

This is the very first SX-140 off the 'line' that was sent to the ARRL
HQ LAB for writeup on "new equipment". It comes with a copy of the
manual. A real "collector's item".
Price is $160 plus s & h from Schenectady, NY. Ask me for a picture!

GET THEE HENCE with thy E-Bay crap - or at LEAST have the decency to
place a FA at the beginning of your subject line so we can give your
post the filtering it so righteously deserves!

WHY do you think all the OTHER E-Bay stuff starts that way...? It's
because we are HERE looking for REASONABLE prices, NOT the super
inflated crap on E-Bay!

capeesh?

Subject: For Trade: military GRC-109 (RS-1)----Trans./ Rec./ power supplies

I have a military GRC-109 (also known as a RS-1), radio set for trade. This is
the transmitter, receiver, and both power supplies (one that uses ac and the
other with a vibrator that uses 6 volts). It is in 4 separate black metal
boxes. The set is in good condition and works. I'm looking for a Zenith
military Transoceanic model R-520 / URR, that is in good cosmetic and working
condition. Also looking for good tube audio equipment, such as McIntosh amps.
Thanks.--Steve Beale /Memphis, TN / 38117

From: jsbasb@aol.com (JSBASB)
Subject: For Trade : military radio set RS-6---Trans./Rec./power supply

I have for trade, a military radio set RS-6. This consists of 4 separate, metal "boxes"---the transmitter, receiver, power supply, and filter accessory unit. The set worked when I hooked it up several months ago. Each unit has the "oilcloth" bag for storing & transporting it. These units utilize vacuum tubes. My understanding is that this set may have been designed for clandestine use, and also as an emergency radio for downed pilots on C-47 planes.
I'm looking for a Zenith military Transoceanic radio, model R-520 / URR, in good cosmetic and working condition. Also looking for good tube audio equipment, such as McIntosh amps. Thanks.---Steve Beale/ Memphis, TN / 38117.

>

Mike,

I have one of those beasts, and the manual that goes with it. You should be able to make the test leads from available parts. The COMMON lead is a straight shielded cable, with the shield open at the test lead end. The MA/OHMS lead is a 2 conductor shielded cable, with the two conductors connected to the test lead at the test lead end. The VOLTS lead is a shielded cable, and somewhere in the probe, there is a 1meg 1% resistor inserted. You might make this out of an old scope probe. If you need the schematics and calibration instructions, I can loan you the manual, and you can copy it and return it.

Date: Tue, 14 Mar 2000 06:03:35 -0500
From: Carter Grabarczyk
Subject: HP 410A, B, TS-497 sig gen

Anchorites,

I recently had to help the sister of a deceased ham friend clean out some old equipment that I have no need for. The equipment is:

2 ea HP 410A RF/AC voltmeter

2 ea HP 410B RF/AC voltmeter

1 ea TS-497 signal generator, 2-400 MHz (seems to be military version of Measurements Corp Model 80 ???)

Can anyone tell me if there is any value to these? If interested, please make an offer on any or all; also plan on shipping costs from the Detroit area. Otherwise, (sadly) it will probably end up as dumpster food.

Thanks,
73/Carter/K8VT

From: Paul
Subject: RCA Broadcast TX For Sale

RCA BTA 1R1 1 KW broadcast transmitter. Operational. Tuned to the top
portion of the broadcast band. Excellent (large) candidate for 160 or
75. This unit is in good condition for its age. (1960 ish) Scratches on
cabinet and a few switches need new paddles. Needs 208-240 VAC single
phase.
You will need a pickup for this baby. 1300 lbs, however the transformers
are seperate for ease of moving. Easy to load.
I would not be selling this except I can't afford to move it across the
country.
Unit is in Toronto. Must be picked up. Can not deliver.
$750 US or trade for HF transceiver, commercial HF RX or old tube RXs.
email me directly for pictures and for any questions.

.

Date: Tue, 14 Mar 2000 18:46:34 GMT
From: k5dh@raytheon.com (Dean Hemphill, K5DH)
Subject: Wanted: Heath and Drake stuff

Wanted... the following stuff:

Heathkit:
- Power transformer and plate current meter for a DX-40
transmitter. I don't wanna spend a fortune for these.
The transmitter was a freebie and it's real scruffy.
I just hate to junk it out when all it needs is to
have a transformer and meter put in.
- Frequency dial scale for a VF-1 vfo. Must be in good
shape with all markings intact. I'll buy a whole vfo
to get the dial if I have to (and it's cheap enough).
I could also use a set of decent original VF-1 knobs,

but they're not a necessity.
- Front panel for an AC-1 antenna coupler. Must be in
good shape, with paint and all markings intact, and
NO extra holes or modifications.

Drake:
- T-4XC transmitter in good working order w/manual.
It doesn't have to be a pristine "museum piece".
My lonely R-4C receiver is longing for a mate...
- Accessory crystal cover for R-4C receiver.
- 8 KHz a-m filter for R-4C receiver.
- Model 2-AC calibrator and 2-NB noise blanker. Must
be working. I need these to go in my 2-C receiver.

I have a very nice Hammarlund HQ-160 Receiver. I traded this rig for an old PC in 1988 and have used it less than 50 hours since then.

Cosmetically, I rate it a 9 out of 10. Faceplate, tuning dials, knobs and emblems are all excellent. The case has a few scratches and very slight color fading. The chassis is has very slight surface corrosion and the original cord is nice and intact.

Electrically, I rate it a 10 out of 10. It has velvety smooth tuning control, excellent selectivity and sensitivity. The audio is a dream, especially from THE ORIGINAL MATCHING SPEAKER. The Q-multiplier is wonderful when digging out those distant CW signals. This receiver has been used on 80/75 meters and never been tested on other bands. To my knowledge, and my best investigative techniques, the unit HAS NO MODIFICATIONS.

This receiver has been exclusively paired with a Heathkit DX-100 transmitter. It has never been abused or stored anywhere but indoors. It comes with a reproduction copy of the original manual and the matching speaker, which is in excellent condition. Downsizing the shack has forced me to sell this wonderful 40 lb receiver. You WILL NOT be dissatisfied.

THIS UNIT IS FOR PICKUP ONLY. I live in Farmingdale, NY (Long Island). I would not risk shipping this and you wouldn't be happy paying for it. Contact me in the evenings (6pm to 9pm EDT) for any additional questions at 516 293-0341 and ask for Lou. Asking $250 OBO.

Go to http://hoflink.com/~lbellock/FOR%20SALE/hq160_frt.jpg or http://hoflink.com/~lbellock/FOR%20SALE/hq160_bck.jpg for a picture.

From: Rich Links <Richard.Links@ucop.edu>
Message-ID: <38D694B4.331BCB02@ucop.edu>
Source record: 69312

For Sale:

I have a late 1930's CLASSIC Hammarlund "Super-Pro" receiver with power supply.

I have not tested this unit but it does come with a separate power supply, which to me looks as if it was cobbled up for the receiver, or otherwise, a unit originally manufactured by Hammarlund, though modified a bit.

Both units need to be checked out and restored, however.

Someone has also replaced a part on board the receiver chassis, which I recall might be an audio output trannie.

The receiver is in excellent physical condition and otherwise, most clean looking.

Located in Berkeley, CA and TOO HEAVY to ship safely.

Asking $145 in present condition.

Thanks

Richard Links

4560. HUNTER equipment

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-20 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <20000320185415.01808.00001073@ng-cr1.aol.com>
Source record: 69324

About a year ago, EBay had a HUNTER rackmount transmitter, with a VFO. It was made in Cedar Rapids, and looked a lot like it might be a Collins knock0ff, with RCA influences. The panel layout looked like a predecessor to the A-line. It had a VFO to set freq , was hollow state, and put out, as I recall, 100 watts.
I have never heard of Hunter again, altho there is an amplifier mfr of the same name.
Can anyone tell me about the Iowa company? Other products, etc.

EMail ;please

$285 plus s & h from Schenectady, NY. Includes copy of manual. This rig was overhauled last year & some tubes, power supply caps, etc. replaced. There do not appear to be any modifications - all original knobs, etc. It's in decent shape inside & out for a 40 year old rig. The only known problem is that when I was talking with WA1HLR on 40 meter AM recently, the plate current started to climb - so, it may need some minor work. Tim said that it "sounded good for an unmodified Valiant".

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

Hello group, has anyone the compactron adaptor, Hickok part # 1704
that they can part with reasonably ?

This allows you to plug into the TV-7 tester tubes like 6LF6, 6JE6C, etc.

I will pay 20 dollars delivered to New Jersey for a good,
completely working one.
I had found one last month but it arrived broken and worthless.

Please respond privately if available.

Regards,
Joe Pratt, Tubecntral@aol.com

Okay, no one cares about the dampers.
<...dampers cut...>

But what about:

>6JA5 ? (2 of these)
>6LQ6/6JE6C Beam Power Amp (only one)

and I left out:
6LX6 (2 each)

>Want them?

These are pulls from TV sets, but the filaments are continuous.
I see AES has these for "big" money.

Mic is a Turner 454X SSB mic. Wired for Kenwood TS-520/530/130/820/830 rigs (four pin mic jack). Works great. $55 shipped lower 48.

First amp:
Northern Radio Company N542 Kilowatt HF amp. It has six user set channels that cover 2-30 mhz. There is no PS. Designed to run with a supply that will provide 4 KV. This amp is built like a tank. Sat in the previous owners shed for 16 years, uncovered, but out of the weather. Needs lots of cleaning up on the top but the underside looks excellent. Uses a pair of Eimac SK-410 air system sockets. I do not have the chimneys. The filament choke is missing. It uses a B&W model 800 plate choke. There are six banks of 4500 volt air variables for the plate tuning side and a bank of six much smaller spaced air variables for the loading side. There are also numerous RF rated doorknobs, some 7.5 kv and some 5 kv. There is no blower (but needs one).

The tank coil is motorized so this is a very unique but probably difficult project amp. I do not have any documentation. My plan was to resurrect back to life but it is too involved with this motorized tank set up and I want to devote my time towards my vintage AM side of the shack. You could re-do the tank. The large heavy duty ceramic switch is motorized.

The front panel is a 19inch rack mount that is 16" tall. It has the following switches on the front:

1. filament and plate power on and off with indicators
2. channel 1-6 with indicators
3. local/remote with indicator
4. Po, Ik, Ip, Vp and the associated meter reads 0 to 1.0.

Also has two fuse holders on the front panel.

Price is $195 shipped lower 48.

Second amp is a Henry 1KD5. Needs a plate xmfr. This one has the original ECA plate xmfr (ergo, crappy). The amp also needs a tube but the chimney is included. Also have a copy of the manual. This amp covers 80 to 10 meters and will work on the WARC bands. It uses a single 3-500Z (not included). Around 60 watts in will give 700 out. Use your own plate supply or build one up yourself. Dahl had replacement plate xmfrs for $175.00. See www.pwdahl.com .

Price is $255 shipped lower 48.

I have an Eimac 3-1000Z, date code 8718, that has been in my basement
for 10 years or so. It is in an Eimac box, but the box is labeled
8164/3-1000Z. I "eyeballed" the filament connects and it ohms out.
I have no way to test it.

Useful to anyone?

Thanks,

Steve.

Looking for a manual and schematic for a Heath MT-1
transmitter. The BAMA doesn't have it, and all I've
been able to find on-line is a fuzzy schematic. Yes,
I'm aware of manual vendors like HI, W7FG, and so on.
I'm hoping one of my fellow hams will be kind enough
to provide me with a photocopy. I am always willing
to pay postage.

>Bob Bartel W2AWS

I haven't tried one myself, but I worked a fellow on 20m last week
who uses one, and he swears by it. He uses it mobile and says it
really works well to cut out the hash and power line noise. I am
seriously thinking about it, because I deal with S-9 noise levels
(with the preamp OFF!) on my commute to and from work in Dallas.

From:
Subject: Manual/docs on National RCK-N

Doug - the RCK isn't Navy issue, as I recall it is a Civil Airways Administration receiver. One way to tell: does it have a C.O.N.S switch? If so, it's a CAA receiver. I sold one, with manual, to an aviation museum in colorado last year. Maybe you could track down the museum and get them to copy the schematic.

IIRC it is just like an NC100 except it has a CONS circuit.

From: jimmoci@aol.com (Jim Moci)
Subject: TRADE my JOHNSON500 for your???

Before I put this thing up on Ebay I wanted to see what I could get in trade for it. I have a Johnson 500 RF deck. No power supply/modulator. It has some scratches on the front and around the corners but its not too bad. The Cabinet has been glass beaded and powder coated with a very tough wrinkle finish and is ready to be sprayed in Johnson Maroon. The inside is in nice shape and appears totally stock. I always intended to rewire my 4-400 modulator/power supply and make an overkill AM rig out of it but I just have too many projects and not enough time. I am looking for something I can plug and play that is exceptionally clean. I would prefer a Ranger, Valiant, Collins 32V, B&W 5100 or other super clean Plate modulated transmitter. I am also looking for a KWM2 or 2A. You guys know what this thing is worth and I know what other clean boatanchor rigs are going for (alot) so lets not insult each other. I will be entertaining offers till next weekend. If nothing catches my fancy it will be available on ebay.com

Tnx,
Jim

P.S. For those who are not familiar with this transmitter it is a 4-400 transmitter with an 811A modulator. Johnson did not make many of these and they are pretty scarce. The power supply/modulator was a seprate unit that sat on the floor. Many power supplies did not make it thru the years (including this one) and alot of hams would build their own that exceeded the specs of the Johnson original. There are a few of these rigs on 75 and 40 meter AM and they sound great. In stock form they are 500 watts input (approx 375 out) and with a beefier supply/modulator they will do more. I have had a few emails asking me the value of the unit. The last few that I have seen sell on the net have gone for $1400 and $1500. These were complete units. I feel this one is probably worth about $750 in its current state. The deck is working and has been tested on another hams working PS/Modulator. It is in average shape and is fully restorable and it comes with the original manual.
Tnx for reading, Jim

4600. Need Help Finding Choke For National NC-125

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-21 00:00:00 UTC
From: kd7fxk@aol.com
Message-ID: <20000321154654.01942.00007341@ng-dc1.aol.com>
Source record: 69267

Hello All,
I recently purchased a National NC-125 receiver. Much to my disappointment, the radio worked fine for about 5 minutes, after which the choke (I believe it's the AC choke) started sizzling and the NC-125 died. Now I am on a quest to find a replacement choke for the National. The manual I have lists the choke as National part K317-1, and describes the part as an iron core choke, 120 cycles, 10 henries, 100 ma, 300 ohms. Any help in locating a replacement choke would be greatly appreciated. Thank You.

David, KD7FXK

Source record: 69275
Cross-posted to: alt.ham-radio.marketplace,rec.radio.swap,rec.radio.amateur.boatanchors

FOR SALE:

OMNI D model 546 HF transceiver SSB and CW on 160-10m
The rig is in near mint condition. Best looking one I have seen in
years. I was delighted when I got it.

Comes with the matching 252MO power supply,
cable for 252MO to 546, Comprehensive Manual,
DC breaker and cable for use with 12V DC
of another source, mobile etc.

Covers 160, 80, 40 20, 15 and 10 meter bands.
It appears to have narrow filter(s) for CW -
at least it sounds really sharp and narrow on CW.

I am just looking to get back what I paid for it which is $350.00
plus shipping.

Please e-mail me if you are ready to start enjoying all the
benefits of a great TenTec rig at a reasonable price.

Regards - AF4K

I have several of the Valiants here, Stan, but wanted to warn you (if you don't already know) that Valiants do not ship well at all. I speak with some unfortunate experience! Packing appears not to be the issue. The transformers tend to tear loose from the chassis and if the box is rotated, other things tend to shift and bend. Maybe professional crating might help, but I have not seen one come out without some sort of damage. These are beautiful units.. so hate to see another one bust a gut... hi. Just my experience, for what its worth. 73 de Jeep/K3HVG.

VLF - HF Watkins Johnson receiver, in a portable rack mount case (new),
with an M-7000 data decoder, and a light / power bar. Very cool system.
Ready for Field Day, emergencies, or just plain fun.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=289895051

Eleven very high quality pictures.
Thank you for looking.

Kevin

4617. Compactrons

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-21 00:00:00 UTC
From: novatech@eskimo.com
Message-ID: <8b6ht4$10m$1@eskinews.eskimo.com>
Source record: 69332

Having sorted out my tubes, I found some "compactrons" which I have
no use for, nor do I have a way to test them. So they are to be
given away or traded. Here's the list:

Dampers:
17ay3a
6ce3/6cd3/6dt3
6dt3
6dw4b

38he7 damper diode-pentode
10ku8 double diode-pentode (bulb is compactron size but has 9-pin min)
12AL11 double pentode
17cj5 ?
6ja5 ? (2 of these)
6lq6/6je6c Beam Power Amp
33gy7a diode-pentode (2 of these)

Want them?

Thanks,

Steve.

4619. Value of National/HRO knob and gearbox

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-21 00:00:00 UTC
From: k9sqg@aol.com
Message-ID: <20000320203820.03505.00002335@ng-ck1.aol.com>
Source record: 69334

I'm considering some alternatives for ganging some capacitors and roller inductors. Decision will be based on the value of some of my spare components. Does anybody know the market price for the old National/HRO tuning knob that has a large black knob and windows for the numbers? Also, I have the dual output shaft right angle drive that goes along with it and wonder what it might be worth.

Thanks for taking the time to read this and 73...

Evan

Not sure why you would say this. I've seen several of these (Narda, HP, and
others), and +/- 0.5dB across the operating range is not uncommon.

For Sale:

Two Heathkit V-4A VTVM. One is fully operational but I think it needs a new battery. The other does not work. Use for parts or fix it. No books. Also have an RCA Senior Volt-Ohmyst WV-98-A. Works FB and looks great. This is the lab quality one with the large meter. Have all the leads. Been keeping these around but now I have an O-scope with an RF probe so no longer need the VTVMs.

Sell all three for $65 shipped lower 48.

Most Hallicrafters are "boatanchors", ie, metal cabinet radios with
short wave bands in addition to MW AM. But I have a few that are just
broadcast radios. See them at this web page:
http://www.geocities.com/wa2ise/radios/g.html#hall
No metal, just plastic or wood cabinets. Of course, the chassises
are metal or circuit board. What is the plural of chassis anyway? :-)

You might very well find out that the motorized tank and caps
are part of an 'auto tune' setup that automatically dips and tunes the
final when there is a remote-controlled frequency change to a different
channel...

NR was good stuff in it's day. :)

Dampers make fine rectifier tubes. High PIV, and high heater-cathode
voltage rating. And healthy peak current.

From: Radios_R_Me@hotmail.com (Radios)
Subject: TenTec OMNI-D HF transceiver

FOR SALE:

OMNI D model 546 HF transceiver SSB and CW on 160-10m
The rig is in near mint condition. Best looking one I have seen in
years. I was delighted when I got it.

Comes with the matching 252MO power supply,
cable for 252MO to 546, Comprehensive Manual,
DC breaker and cable for use with 12V DC
of another source, mobile etc.

Covers 160, 80, 40 20, 15 and 10 meter bands.
It appears to have narrow filter(s) for CW -
at least it sounds really sharp and narrow on CW.

I am just looking to get back what I paid for it which is $350.00
plus shipping.

Please e-mail me if you are ready to start enjoying all the
benefits of a great TenTec rig at a reasonable price.

Regards - AF4K

Subject: WTB: Receiver power transformer

I need a power transformer for an old receiver I'm refurbishing. The secondary
should be about 100V either side of center tap. Filament voltage(s) and current
are not important since there's plenty of room in the case to mount an extra
fil xfmr. Anyone got one they could part with?

A few years ago I bought an NC-57 but it was damaged in shipping and became a parts set. It now belongs to Dave Noon, VA3DN, and is stored north of London, Ontario, at Bill McHugh, VE3CSK's place. Dave has had the knobs and a few parts off it. So have I to fix up an NC-33. The last time I looked the speaker, an original, was OK. Let me know if you still need a speaker and I'll try and get it for you. Cheers es 73. Harry MacLean, VE3GR0

Gentlemen:

I am in need of at least one (preferably two) "T" connectors. They are a high voltage BNC-type connector--I think they are called SHV connectors. They look like a regular BNC connector, only the inner pin is sleeved with an extra insulator. The type I need will have a female at each end at the top of the "T" and a male at the base. Please e-mail direct. Thanks for your time.

Surplus Sales of Nebraska has a 3x5" Collins communications speaker,
1-5/8" deep, for $5. (SPK)A35S-4 is the part number in their catalog.
Has "small repairable flaws."

Is there anyone out there in boatanchor land that could help me help a co-worker find out some information on this rcvr??

It is a Royal Canadian Air Force receiver freq range from low Khz to 30Mhz, 14 tubes, some of which he trying to identify weighs about 100 lbs.

Any helpful replys will be greatfully received.

reply to... jonie@ecn.ab.ca

Thanks....John Hill...VE6CU...

4652. Heath HX-20 and HP-20 for sale

Hi. I have a very nice looking Heathkit HX-20 mobile (or fixed) ssb/cw transmitter. It's a classic rig. The matching power supply is a HP-20. Both are very clean. The transmitter has a minor scratch on the top, but

is easily repainted or ignored. No scratches on the face plate. Will sell together, only. No manual, but they are available from several places. Unknown working condition, but physical condition is excellent. $150/obo plus UPS from Seattle area 98019 Jim W7LS

4654. FS or FT: Homebrew tetrode HF amp

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-22 00:00:00 UTC
From: Lane Ku7i <Ku7i@worldnet.att.net>
Message-ID: <I6UB4.9878$9M1.698591@bgtnsc06-news.ops.worldnet.att.net>
Source record: 69284
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

This is a very well engineered homebrew 4cx1500B HF amp. Covers 160 to 10. The power supply runs 3500 volts and uses a Dahl plate xmfr (ARRL-001) rated at 2700 volts at 1.5 amps CCS. Oil filled cap for filtering. I believe it is the Dahl 5kv unit at 53uF. Has a time delay, soft start relay. The supply is an exact replica of the 3500 volt supply in the ARRL handbook from the mid 80s sans the variac.

Wired for 240 only. if you run it on the 220 tap of the xmfr the plate voltage climbs to 4000 volts. Great for 3-500Zs but too much for the tetrode. keep it at 3500 and tune up with a tuning pulser and you will be fine.

The screen supply is seperate and is well regulated. User selectable taps for 150, 250, 0r 350 volts.

RF deck uses large vacuum variables in the plate and tune side. Quality turns counters for tune and load settings. Fixed coil for the L with a huge ceramic bandswitch. Seperate meters for plate current and plate voltage. Multimeter for screen I and E and grid I and E.

Amp will do 1500 out on all bands except the bandswitch arcs on 10 so I do not use this amp on 10. Could be self-oscillation problem on 10, not sure, you fix. 50 watts in gives full out on the other bands with only a needle's width amount of grid current.

In a 36 inch tall roll away cabinet. Shipping is possible minus the cabinet. PS and rf deck will go in seperate units. The RF deck will fit in a 51J4 size cabinet. The PS is a tad bit taller than that. This amp works great but for now I want to stick with triodes. If you want a serious legal limit amp look no further. I much prefer to demo prior to purchase.

Schematics are piece meal. The builder has some reference data but not much although as I said it is really built well.

Price is $750 and includes a full output spare Eimac 4cx1000A. Whether or not you want the cabinet does not matter, price is the same.

Will consider another HF amp in partial trade but it must cover 160. Will also consider a fully operational and nice looking blonde, er, I mean, Johnson Valiant I or II.

You might very well find out that the motorized tank and caps
are part of an 'auto tune' setup that automatically dips and tunes the
final when there is a remote-controlled frequency change to a different
channel...

NR was good stuff in it's day. :)

hi Herbert

seems I misunderstood that it was space-charge valve, and DL2IE's book
confirms that you are right
see: Kommerzielle Nachrichtenger&#65533;te von 1914-1945 by Gerhard B.
Salzmann DL2IE - available from DL6VW W. Gierlach
I wrote a letter to him to note that some valves were missed, this
might be added for later version of the book, some valves in
Ostmarkwerk LW and KW receivers: LP09, LP10, LP11 in RP-19 receiver,
LP17, LP18, LP19, LP29, LP33 in RP20 receiver

but it is always easier to find faults than being correct, hi

Also bought the book:
"Zur Geschichte der RV12P2000", but can't remember where I got it
from, don't think it was GFGF, actually, but some friends now want to
buy it....

Source record: 69152

I have an AN/FRR26 which was made by Kaar Engineering back in 1959
it is a single-channel receiver that was designed for the 2-8 MHz range,
and was also designed to be operated locally, and via a 2-wire,
metallic-pair
phone line.. control voltages and currents were applied between either of
the
two lines and ground for controlling BFO on/off , BFO pitch, and RF gain..

The one I found was new in the wrapper with the manual, extender cable
for servicing, and the original factory acceptance test results.

The AN/FRR26 was built for the Navy and appears to have been a shore-station
receiver that was rack-mounted ..

Anyone else ever run across this model ??

Hey gang,

Looking for Johnson Viking maroon paint in a small touchup bottle. Anyone know where I can get some?
XYL got her claws on the old Ranger while "cleaning" the ham shack and left a few marks.

No doubt her way to telling me to get rid of my poor 40 year old beast....

Thanks for any info.

4675. =AD: Prep for HAM/FCC tests (yes, new tests too!). Download today!= .

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

All Gear working last time tested unless noted. Shipping is extra. Please reply to my email address.
Thanks
EJ (KC5EPI)

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $175

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $45.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $60.

Marantz Model 2220B: Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $175

AR Inc: Stereo Amp, All solid state. $100. Please don't ask the model #. I have been asked this many times and unable to locate on the name plate. The serial # is: AA002291. It comes with the optinal wood case the face is Gold Alumi. With the following controls: Mode selector, Bass, Treble, balance and volume. In the upper left corner is a red LED and on the bottom right is a normal/monitor switch. I would rate it a 7 on appearance.

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $115 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

RS Pro 30 Scanner: Hand held 16 channel Digital scanner. Looks & Works good, but the battery cover plate is missing $35.

What kind of info are you looking for ? There are a number of web sites that have pictures and descriptions of that radio. I found them by searching for AR88LF. There are also schematics on the web for free for it. I obtained my AR88LF last month. Your right about the weight.

Tom,

The 803 was the final for the GO-9 military transmitter. I used one of those back in the late 50's. That's my only experience with it, but it always looked to me like a tall 813. In the GO-9, it produced about 140W of RF.

FS SWAN 350 (loaded)
FS Swan 350...410 remote VFO...vox...selectable upper and lower
sideband...calibrator...speaker pwr supply...rig is a real beauty..front

panel is flawless...case is beautiful...chassis is free from
anything...high serial# near the end of the line.
The 410 remote vfo has a paint scuff on the right side...I placed my qsl
card over that area...front panel of the vfo is perfect...pwr supply &
speaker is also beautiful...comes with the original manual.
I operated this station for 3 years without any problems....occasionally
I would have to spray the volume control with DeOxit cleaner......power
output is over 200 watts key down on cw and over 400 watts on ssb...$300
plus shipping...depending where ur at it could run as high as $40
UPS...equipment is heavy.
If you let this rig warmup at least 45 mins..its as stable as a
rock..trust me.
Reason for selling...my 50`s station is taking up all my room.....tnx

Boatanchors are Ham Radio's living heritage!

Restore something! Smell that hot solder!

Better 'n booze...

And, you can get up afterwards if you stay away from the B+!!

Keep your finals dipped, now...

[Snip: Much interesting info on space-charge valves]

The Radio Society of Great Britain "RadCom" October 1991 had some info
by a Dutch amateur P.Bakker on using modern pentodes as space sharge
tetrodes. I quote part:
"This turned out to be possible provided that the control grid was
connected to the cathode, the screen grid used as a space charge grid
and the suppressor grid used as the control grid"
It would be interesting to do some experiments myself.

Subject: Looking for an odd connector

Gentlemen:

I am in need of at least one (preferably two) "T" connectors. They are a high
voltage BNC-type connector--I think they are called SHV connectors. They look

like a regular BNC connector, only the inner pin is sleeved with an extra insulator. The type I need will have a female at each end at the top of the "T" and a male at the base. Please e-mail direct. Thanks for your time.

Check the Howard W. Sams "Photofact" series at http://www.hwsams.com/
You can get a schematic and parts list, although not a tune-up procedure.

Best regards,
Joe

Subject: World's oldest coax cable

You might be right---there weren't too many coaxial connectors on WW II
military radios until late in the war.. The earliest mention I could
find was in a timeline:

1936 - - First coaxial cable installed between New York and Philadelphia
made available for multi-channel
telephone tests. The coaxial cable was demonstrated on November 30th
when Frank B. Jewett, president of Bell
Telephone Laboratories talked with officials of the FCC in Washington.

I was maintaining wireless Set #19 installations in England in 1942 using
co-ax cable and the earlier MK 1 was being used in the desert in North
Africa before that, also using co-ax connectors. &s

4695. What's WRONG with ham radio...?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-23 00:00:00 UTC
From: Gary - KJ6Q <davison7@gte.net>
Message-ID: <Y2tC4.496$QJ3.93250@dfiatx1-snr1.gtei.net>
Source record: 69238
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.policy

I received a personal Email on this subject recently - here it is,
along with my response...

==========

> I've been licensed since 1989 and my interest in the hobby run hot
and cold.
> I deal with a radios system at work every day so, I get my fill of
radios.
> However, I really do enjoy radio. A lot !!!!
>
> When I listen to the ham bands, I hear a lot of interesting
conversations and
> it keeps me entertained. However, the majority of the QSO's are by
men in
> their 50's or older. You can tell by listening to them.
> WHere is the interest in the hobby? HOw do we get young people
involved?

<snip>

You know, back in the 50's when I was first licensed, the discussions
on ham radio were pretty much IDENTICAL to todays as near as I can
recall! Folks talked about their stations and antennas, their recent
vacation, their jobs and their families as well as their individual
locations... SO, the notion that TODAYS subjects of discussion on ham
radio are somehow "different", or geared to "old coots", and somehow
RESPONSIBLE for a decline in new hams is BUNK, and VASTLY overblown!

We used to become drawn to ham radio due to the "mystique" of
electronics, and a means of communication UNMATCHED by anything else
readily available other than a telephone - today there are MANY easily
and unlicensed methods that will do the same thing, with MINIMAL
demands upon the user to employ them. There's NOTHING "wrong" with
Amateur radio - it's just been upstaged by OTHER easily available
technologies and communication means that are more directly geared to
the wants of their respective users - and there's NO WAY we will EVER
"dumb down" or "remanufacture" or "repackage" our hobby into something
it IS NOT! We can't FORCE current users to arbitrarily change their
topics of conversation - and there's nothing WRONG with their subject
material anyway!

Sometimes, activities, devices and pastimes appear on our society -
flourish for a time, then disappear - maybe NOW it's ham radio's
turn...

yes, i'd be interested. please use my e-mail address below (after
anti-spam correction) - thanks !

> Believe RE074d was used in much early Wehrmacht equipment, also had a
> large frequency control unit made by Lorenz for a broadcast station,

i only know of 1 Wehrmacht set which used 4 of the RE 074 d, it was
the E 373 Bs from 1934 (also called "Tornister-Empfaenger" because
it could be carried like a rucksack). in comparison, the RE 074 was
contained in quite a lot of army sets, but it's not a space-charge
tube and operates at a Vp of ca. 150 V (which is 10 times as high).

cheers -
Herbert

~~~~~ See RadioDocs Radio Den at:~~~~~~~~~
http://members.aol.com/radiodoc37/index.html

Yaesu FTDx560 HF Tube Transceiver 10-80 meters,
plastic still on faceplate, excellent condition-
with copy of manual $250.00 SOLD

Alinco DR110, 2 meter mobile, 45 Watts Good Condition $110.00 Pending sale

Siltronics Mdl 90 -6 VFO $70.00

Siltronics Mdl 90 -3 VFO $70.00

Turner Plus Three amplified Desk Mic, Grey Model $35.00

Palomar Skipper 300, Chrome Dome amplifier, 10 meter base tube amplifier. Uses
4 8950 Tubes, Tubes and amplifer in very good condition will swing 400+ watts
pep. $230.00

Kenwood TS520 HF Transceiver, Good condition, witn non-amplified D104 Desk Mic.
Also includes a kit to make your TS520 operate on AM. Kit include AM filter
and instructions. $325.00

Kenwood PB-18 HT Battery 7.2V 1100mAh, Like New in box hardly used $35.00

Kenwood PB-17 HT Battery, 12V 700mAh, Like New in Box hardly used $45.00

Kenwood PB-13 HT Battery, 7.2V 700 mAh, Untested $10.00

Kenwood PB-32 HT Battery, 6V 600mAh, Untested $10.00

Cobra CAM88 Tube CB Base, 23 Channel Working, No Mic but I have the Mic Plug
with it and copy of the SAMs. $65.00

Realistic Navaho TRC-30 Base, 23 channel, Works good $30.00

RT-524 30-76 Mhz Military FM transceiver, Good condition an 8 on a 1-10 scale,
No nomenclature tag (desirable for collectors) Replaced with Serial Tag.
Manuals and original mic. $500.00 See Fair Radio Catalog for more info. Their
Price $625.00-$675.00

Swan 1200W 10-80 Meter Amplifier, Very Clean Condition, Uses 4 6LQ6 Tubes
With Manual. $250.00 Obo Pic will be on the WebSite Soon! Will trade for a
Kenwood TS520. SOLD

Yaesu XF-32A SSB filter for FT101 series, $40.00
~~~~~

Tram D201 Parts, Wood End Caps, Meters, Crystal/selecter Board, Transformers, Face Plate, Knobs, crystal filter, Etc... Inquire with your needs,.

Misc. 24V Switching power Supplies, Cosel, Power One Etc... Most new in the box

Crown IC-150 Stereo preamplifier, Metal cabinet
model with copy of manual $150.00 Obo Reduced $110.00

Midland 79-290, removeable face 10/11 meter AM/SSB/WX
Mobile,dual final design, 5 bands, WX, good condition with
stock mic. $110.00 Reduced! SOLD

Homebrew 3 tube 10 meter amplifier, uses 3 military
versions of the 6146, Seperate open chassis PA and
power supply deck. RF sensing, Plate Load, meter, SSB
and AM. 150-200 watts with low drive $130.00 Reduced to $100.00

Misc. Vacuum tubes (No Sweeps right now) See WebSite

Kenwood TS430, with AM filter and FM board, Manuals, Clean and working Great $400.00 SOLD

Browning Mark III receiver, excellent condition $140.00

Browning Mark III Transmitters, Make one good one from the two units $110.00

The above Brownings can be seen on the website

Icom IC-230 with manual, mic and mobile bracket. not working correctly, VCO unlocks but in great cosmetic condition,, $30.00 Shipped (Pending Sale)

Browning Mark III Receiver, Browning Mark III AM Transmitter, Very Clean! and D104 Mic $250.00 Pic will be on the Website Soon !

Tram D201s, Both have unlocked VFO's, One has lower freqs
with good AM and weak SSB the other has upper freqs with good
AM and SSB. Both in good condition $250.00 Each

Penetrator HB-150 10/15/20/40 meter Mobile amplifier, 150 watts class AB1
Low drive input required, super clean! $150.00

Yamaha FG-460S-12S, 12 String Guitar, Beautiful guitar, near flawless, Gold hardware, Pearl inlay, Seymore Duncan Acoustic Pick-up, Hard Case $350.00

Hooker 10 meter Amplifier, 1 pill design, PEP and RMS mode, CW/AM/SSB, Preamplifer, Clean, still has factory seals $75.00 (Pending Sale)

Pacifc Scientific / Superior Electric 2 Axis Servo System $250.00

Tram Diamond 60 AM/SSB Mobile, SIltronics Model 90 VFO -3 and Paradynamics Meter, All in good working condition $175.00 (Tram 60 Pending Sale)

VHF Trielectric Amplifier 13.8 VDC As Is $40.00

Motorola UHF 13.8 VDC 450-470 Mhz Solid State Amplifier, clean!, Surplus, As Is $40.00

Alan K1313 10 meter Single Tube Modulator, 110 VAC, With Spare 6KG6 tube, New Russian tube installed, Spare is 90% or better, Clean and works Great! $150.00

Johnson Messenger 250 Base, With Original Box and Manual $75.00

Astatic 10DA Mic Head, Works and looks good, Missing the locking Ring but plugs right into a D104 Stand $30.00

Fentone 500C Studio dual crystal Mic Head On a TUG8 D104 Stand, Wired to a Demco Tube Modulator. Smooth Clear Audio! $200.00 Obo

Pentax K1000 35mm Camera, Wide and normal lens, 2x teleconverter. Cokin filter holder with flare guard. Several special effect Cokin Filters, polorizers and acessories, carrying case etc... $250.00 Obo

SBE Trinidad , 23 channel base CB, near perfect condition, original manual $70.00

Fluke 8050A Digital Desktop Multimeter, AC/Batt, needs new batt. but works great on AC $50.00

NF Circuit Design Block Model CR-116 Low Distortion Signal Generator, $125.00 Obo

Misc, Yaesu FT101 Components and parts, Misc untested boards, Email If you need something.

Electrovoice Mic.... See Website!

Misc 19" Racks..... Email for Details

got my license in 66.
seems to be some problems. Our local clubs have nothing to add, just
some old fellows discussing what we did before, don't want anybody to
start a new discussion. It is almost like senile demente home. So I
don't go to local meetings much nowadays.

we have some VHF/UHF meetings with very much technical discussions,
several such meetings every year, and as some of my friends puts it,
technical interested amateurs goes to higher and higher frequencies to
escape from the crowd

Earlier we had some technical discussions on the bands - particularly 80m ssb, but it was disturbed by breakers, usually they had nothing to add to the conversation, just breaking in when you had explained a technical matter, and the discussion was ruined

I usually overhear the breakers, and was often accused for being unpolite, so I stopped using amateur radio media for technical discussions and this sort activity ceased

Remember I had a very interesting QSO with a G3-stn on 2m ssb, and we talked for some hours, but it was many rather excited persons who wanted to work me from the rare locator. So it seems always difficult to have a discussion on the bands, always somebody breaking and having no interest in the conversation, and after a while we go QRT because we are fed up of all the complaining from somebody who share not the same interests.

Perhaps somebody could start again on 80m, we could have some interesting discussions, but ity must be accepted to discuss a theme without listening to breakers

And you STILL don't GET IT!

MY original post in this thread had NOTHING to DO with CW, or
arguments FOR or AGAINST it - THAT "ridiculous CW issue" is ENTIRELY
of YOUR introduction - go REREAD my original post, and then QUOTE
where *I* made ANY reference to CW...

SEEMS it is YOU who are both instigating and clinging to CW as an
issue against our hobby and older hams - while at the same time
pointing to OTHERS as the "cause" for problems... Perhaps a look in
your MIRROR will reveal much of the "problems" at your QTH... Perhaps
YOU are one of the 4 "old farts" you refer to as CW debaters - *I*
certainly never brought the subject up!

I'm not old nor am I a geezer. I'll admit to stubborn. Then again, I don't see myself as any more stubborn than those determined to turn amateur radio into some radio playland for the people. Morse code never blocked young people from entering amateur radio. It did stop me nor my young friends. In fact it was easily learned by all of us. It is actually more difficult for a young person to get into amateur radio now than it will be in less than a month.

> I'm sorry, but the time for forceful measures is well overdue. While
> the backlash of this fact was felt after the 13wpm reqs were dropped to

This "red herring" stuff (especially with the all caps which mark you as a bit of a wild-eyed fanatic) is getting quite old. Just get off the dime and let us know what the forceful measures are and who will undertake them.

> These subjects are of virtually no interest to most modern technical
> people that would be interested in the hobby - especially young ones.
> It has NOTHING TO DO with getting young people interested.

You still haven't told us how modern technical people are different than technical people of decades past.

We already have entry level amateur license exams without age limit.
Apparently somebody DID come up with something better.

Not all currently licensed amateurs. Not all prospective amateurs are
youngsters. You're really just trolling, aren't you?

Nope, apples and oranges. Driving a vehicle involves life-and-death
situations. Ham radio doesn't. And they do NOT require demonstration
of one's ability to hand-crank a vehicle anymore or use a stick shift.

Filippo Cattaneo wrote:
>
> I am wondering...
> does anyone still actually USE such old radios on CW?

Many, many of us. Preservation of historic radios is one
of the few facets of amateur radio that is actually growing.
While it's important to keep moving forward, there is also
a need for some of us to preserve the history of where
we have been.

Any clown can plug in a YaeComWoodie with computerized
omega-zoom-woopie bells and whistles. The blasting thing
will practically get DXCC all by itself. Just turn it on
and go get some coffee. Where's the sense of accomplishment
in using something that is going to do nearly all
the work for you? There's no satisfaction in doing
what anybody can do with practically no effort.

Using an historic radio is challenging,
requires patience and more than a little skill.
And restoring a 60-year-old radio with your own hands
is an especially satisfying accomplishment.
By restoring and using such a radio, you have made
a small but meaningful contribution to preserving
the heritage of mankind.
And there is a romance in working with such a radio.
It's something that not everyone can or will do.

YOU, fella' are the one "stuck in a rut", and the primary source of CW as an issue in this thread... The ONLY reference to CW in my original, was the comment that CW in earlier times was pretty much a NON-issue as far as entry into ham radio was concerned for most. But NOW, we have a new class of "gimmees and whiners", who seemingly are determined to MAKE an issue out of it, regardless of forum or original intent of those posting here - all the while, accusing *others* of "being in a major rut"...

Wise up fella' - it appears YOU are a major source of your own problems!

Subject: FS SWAN 350 (loaded)

FS SWAN 350 (loaded)
FS Swan 350...410 remote VFO...vox...selectable upper and lower sideband...calibrator...speaker pwr supply...rig is a real beauty..front panel is flawless...case is beautiful...chassis is free from anything...high serial# near the end of the line.
The 410 remote vfo has a paint scuff on the right side...I placed my qsl card over that area...front panel of the vfo is perfect...pwr supply & speaker is also beautiful...comes with the original manual.
I operated this station for 3 years without any problems....occasionally I would have to spray the volume control with DeOxit cleaner.....power output is over 200 watts key down on cw and over 400 watts on ssb...$300 plus shipping...depending where ur at it could run as high as $40 UPS...equipment is heavy.
If you let this rig warmup at least 45 mins..its as stable as a rock..trust me.
Reason for selling...my 50`s station is taking up all my room.....tnx

Subject: Hallicrafters SX-28 & SX-4? parts for sale

I have the following Hallicrafters items for sale:

Front Panel for SX-28: In black crinkle finish. No nasty holes drilled for bizarre upgrades, but definitely need to be stripped, repainted & re-lettered. If you've been living with a bodged front panel then this could be for you! $25.

Cabinet as used on SX-42, SX43, Heavy steel. Black, with silver/aluminum color lid.
Extremely nice condition, even has those square rubber feet intact. My SX-28 has been living in this cabinet, but I found an original SX-28 cabinet and she's moving house! $40.

All prices are negotiable.
Both items are located near Pittsburgh, but will ship for (additional cost) if required.
If you have an interest then please contact me via e-mail:
olracp@stargate.net

Kind regards,

Paul.

4709. Re: BC-312 / BC-348 - still in use?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-24 00:00:00 UTC
From: wf2u@qsl.net
Message-ID: <8bg8je$492$1@nnrp1.deja.com>
Source record: 69052

A lot of BC-312's and BC-348's are used on the amateur bands, many of them together with their original system transmitters (BC-191, BC-375, ART-13). Just about a month ago there were a few coast-to-coast contacts with BC-191's and BC-375's. There is considerable activity by collectors/users/restorers of such equipment on the amateur bands and there are quite a few nets organized specifically for using old military radios (you are welcome to check in with any equipment, including modern). On the East Coast there is the "Old Military Radio Net" (OMRN) on 3885kHz AM, Saturday mornings starting at 0530 Eastern Time. OMRN also has a CW net Sunday evenings at 9 PM Eastern on 3570kHz.
The Wireless Set 19 Net meets Tuesday evenings on 3703kHz CW at 7:30PM Eastern. On that net you can earn the "Vintage Operator's Certificate" even for listening to it on a vintage military receiver, with endorsements for each model of equipment you're using.
There are several web sites on the Internet dedicated to the preservation, collecting and using vintage military radio equipment, as well as mailing lists.

Enjoy using vintage military equipment.

I read of receivers that were supplied with two scale discs. Depending on whether the owner was a Ham or a SWL, one or the other tended to be misplaced and lost. Check if your model has the ham scale on the opposite side of the broadcast scale!

4712. Warsaw Pact radios - Tesla R-4 ???

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-24 00:00:00 UTC
From: Filippo Cattaneo <filippo_cattaneoSPAMFREE@yahoo.com>

Source record: 69055

oh, well, so no German speaker seems interested in answering....
I'll re-post and expand in lingua franca.
I want to introduce you to a couple of my glowing friends.

I have a couple of nice Tesla R-4's, ex Czech Army, 1960's.

This model is a field/mobile military 5-band 1.5-12.5 MHz receiver. Runs on 110/220 Vac and 12 Vdc with ac/dc external PS complete with dynamotor. 500 kHz calibrator, single crystal IF filters, onboard tube & voltage checker integrated w/ s-meter (12-position switch), watertight once closed (one Warsaw Pact mil std
called for 30 minute at 1/2 metre underwater), hi-Z and coaxial lo-Z antenna inputs. 4000 ohm headset and 600 ohm line outputs. Big rotary bandswitching drum. Most tubes identical pentodes. Not one Phillips screw throughout. Works well on CW/AM, but can be coaxed to do SSB. Very stable, but the modest frequency resolution indicated this radio had to be warmed up and manually netted in an active link to be able to stand by or do RTTY.

One unit works well but has one semi-dead band (probably a bad contact in the RF amp chain), the other had no BFO, and since today has no plate voltage (probably a bad smoothing cap shorting and blowing a fuse). I don't even have a spare fuse for them!

I would like to get a service handbook, and to know about sources of spares, accessories, any special tools etc. etc. There are spare brushes and brush-changing tools stored inside the PS and they're cute!

Handbook languages in order of preference (but all OK):
German, Russian, Polish, Spanish, Czech.
No Hungarian - sorry!

TIA!

Stew (is that as in "in your own juices"?), it isn't necessary to
reinvent that which already exists. How constructive do I need to be?
Do you believe you are being constructive? I don't believe your are.

The easy answer is: I don't have to shut up. You have presented a half
formulated idea which you SAY will work (toward something or other) that
the FCC will never buy. Don't take my word. Write it up and submit it.

A hard to find Electro Voice 419 stand with a quite good 664 Microphone. Some scratches and minor nicks but a very good looking pair.

Great for display and use with your boatanchor or modern gear.

Auction ends Saturday.

In the Neteherlands there is the Surplus Radio Society. The meber collecting
and restaurating (is that the good word) of all army equipment. Look to
http://www.xs4all.nl/~srsnl/.
Every sunday on 10.00 local time you can hear them on 3705 kc in AM. A hour
earlier they are in CW on 3575 Kc.
There are more clubs from this, one in Italy, England and France.
I work sometimes with a GRC-9, Ws-19 or other sets.

Get off the CW kick, already. Don't try to avoid the main issue -
which was your "throw in the towel" response to a perfectly
legitimate e-mail you received regarding how to get more people involved
in the hobby.

Do you, or don't you agree that we should at least TRY to get more
young people involved in the hobby?

YES, or NO?

If your answer is no, then there is no use continuing this conversation.

If your answer is yes, then I put it to you again - come up with
something constructive to try to make it happen... or help those that
ARE trying to do something constructive. Don't put up another smoke
screen.

Yea, "old farts" aren't allowed to have an opinion, and certainly don't belong on one side or the other. Whoever gave "old farts" permission to be on one side of a debate or the other?

Petition the FCC to have a ticket self-destruct immediately upon exhibiting "old fart" behavior. Next thing you know, they'll want the vote!

Hi, all,
I actually started my Ham Radio Experience with a BC348R way back in 1950. That radio came from the Island of Tinian, where the Enola Gay was kept. From that Island they dropped the BOMB on Japan. The guy that gave me the receiver was actuall, no kidding, the Comander of the Island of TInian. That radio was used, I am sure, to communicate with the military forces during that time.

Do you think I still have it? NO. Like an ideot 26yr old, I got tired of it way back in 1958 and gave it away.

Now, at 64, with all new gear of the very latest kind, complete with computer attachements that make everything sing and dance by themselves, my mind keeps returning to those days with that radio. It could not receive SSB for some reason I can't remember, but it was a challenging radio to operate. I'd like to find another BC-348R, or better yet the Q which I think does receive SSB.

At the moment, I have a Collins R390A whos serial number says it was one of the few made by Collins, not one of their contractors, and It is great to operate. Old radios are much more fun, somehow. Maybe it's because it links some of us to our past, like the BC348R does me.

That's my story and recommendation for using vintage military radios.

Regards,
Tom - AB5ZJ

All microphone plugs for Drake TR3, 4,4C, T4X ,A,B,C etc, are 3/16" , 3 conducter, same as Collins. If a Drake radio is found with a 1/4" jack for the microphone input , it has been modified .Can usually be found at places that deal in military surplus, or any aircraft avionics shop. Also Surplus Sales of Nebraska has them.

I am new to amateur radio and I really enjoy what privliges I presently have, I would like to eventually upgrade to extra class but my main goal at this point is to find a way to promote amateur radio to responsible people. I have heard alot of people on the air that are not what I consider very good examples to the new comers.
As a newcomer I just happened to find an amateur operator that was able to tell me what I needed and where to go for the tests, until that time I had nearly lost all interest I had for the last 27 years! One thing I think that needs to be done is local radio clubs need to asure there is more exposure so someone interested knows who to contact.
My point has nothing to do with code but everything to do with promoting new people! I don't want to see this hobby die now that I finally re-sparked my interest enough to get a license!

There's plenty of them - from the 70s too. See Electric Radio magazine,
they had several articles on Russian receivers some time back.. Also
believe the Old Timers Bulletin had an article describing
6 or 7 different Warsaw Pact receivers.

I've had a Russian marine receiver, made in the 70s, that was all tubes.
And allegedly theyh made BC-348 copies into the 70s also.

Unless I am mistaken, this radio also appeared in the USA as the
TEMPO-1. It was a very good deal for its time.

IIRC, these also will work (most of them) in the VRC-12 series ground radios. It has been a LONG time since I worked on that stuff!

You stubborn old geezers. You guys do everything you can to block changes that could bring young people into the hobby - saying it is "for the good of the service". Then, when it DESTROYS the service, you just say; "Oh well, it was time for it to die anyway".

I'm sorry, but the time for forceful measures is well overdue. While the backlash of this fact was felt after the 13wpm reqs were dropped to 5wpm - MORSE CODE REQUIREMENTS AND HF PRIVILEGES ARE RED HERRINGS! These subjects are of virtually no interest to most modern technical people that would be interested in the hobby - especially young ones. It has NOTHING TO DO with getting young people interested.

I proposed an Under-16 "Communicator" license class:

http://www.geocities.com/horseshoestew/communicator.html

While you might not agree with it, I haven't seen anyone come up with anything better that would actually catch the interest of younger people, and get them to join the hobby. Face it - dropping OR raising the Morse requiements is irrelevant - it won't do anything to get younger people involved in the service.

The older guys are going to have to realize that times have changed, and that the service is going to have to change. Technology is changing so fast in today's world that it is RIDICULOUS to think that a technical hobby like ham radio shouldn't have to change - SIMPLY RIDICULOUS!

(2) for sale- 4000 VAC with a center tap- 2.1 amps CCS, 175lbs, see pic @ http://members.aol.com/jimmoci/trans.jpg Yes,thats a 3-500Z as a reference for size in the pic. These transformers are very big and have alot of duty cycle. They are removed from 5KW HF Jammers used by the military. They have multiple taps from 208VAC to 240VAC so voltage can be changed + or - a couple hundred volts to suit your needs. It also has a center tap. $250 each. They weigh 175lbs each so pick up near Philly is required. I will be at the Trenton/DVRA Hamfest and the Baltimore/Timonium Hamfest so I can meet someone there with them also.
Thanks for looking,
Jim

SO - I gather that YOU place all "blame" for the current status of ham radio on *CW* requirements?

Interesting viewpoint, since *MY* comments made absolutely NO reference to CW at ALL!

CW didn't draw me to ham radio - OR slow me down - it was merely another milepost that had to be passed - I passed it, and that was that!

YOU, on the other hand, appear to suggest that all that is evil in today's amateur radio is contained in CW and the remaining old farts still active...

You are DEAD WRONG!

BUT, I guess one excuse for personal failure is as good as another...

No, it won't work on 12 volts without the adaptor. The adaptor is basicly an
inverter/rectifier that supplies the high voltages needed. You might be able to
build one, but the transformer would probably cost more than finding one made
for it.

If it's the same as the TR-4, it's just a 1/4" stereo plug. Radio Shack sells them for a couple of dollars.

horseshoestew,
Hi, I'm one of those 'old geezers'. I have enjoyed this hobby for 30
'some years and have found there are some thaings that never shange.
One of them is that 'someone' always wants things to be easier. There
was the same whinning about the code requirements in 1966 as there are
now, usually, by the same 'type' people, those who want something for
nothing.
I've found that there really are reasons for not being able to learn
Morse code. These reasons are few and far between though. The most
common reason for not being able to learn code is a case of the
"lazys". Enough said about that.
I do not want to keep new people out of the hobby. I also don't want
to
'cheapen' the hobby by 'dumming it down' to a 'communicator' level. You
know, there was a 'communicator' level license, it was called the
"Novice" class. Seems that wasn't 'dumb' enough. When you took your
drivers license exam, did you'get' to skip any of the required
operations/requirements because you had trouble with them? Same thing
you know.
so, enough out of this 'old geezer'. Every argument I've used in this
email was what I heard in the 1970's, so you haven't come up with
anything new... just the same old whinning.

You, my man, are stuck in a major rut.

I don't think I can make this ANY clearer. Any debate about Morse Code
is COMPLETELY MEANINGLESS in today's world. You can get rid of the
requirement completely, leave it at 5wpm, put it back at 13wpm, or
raise it to 50wpm - it isn't going to make that much difference in
getting young new members into the service.

Can you climb out of that rut you are in, and try to suggest SOMETHING
USEFUL that will help get youngsters into the service?

Otherwise, take your STINKING RED HERRINGS the heck out of here! It
distracts from useful discourse.

Are you under the impression that typing something in all caps makes it
so?

> Can you climb out of that rut you are in, and try to suggest SOMETHING
> USEFUL that will help get youngsters into the service?

Anything at all would likely be better than your "Comnicator Class"
proposal. It is a doomed bird which will never fly. We already a
simple no code license available to anyone without age limit.

> Otherwise, take your STINKING RED HERRINGS the heck out of here! It
> distracts from useful discourse.

Your record seems to be stuck on the red herring term. One of the neat
things about usenet is that you don't get to decide who has to take his
ideas and leave. The very same freedom which permits you to propose
your ideas leaves us free to dismiss them. You haven't really provided
any useful discourse that I can see.

Siltronix 1011C, 1011D, FD1011A - Sell/Swap

For Sale or Trade -

Siltronix 1011C with manual reprint. Works, but low output and drifts

Siltronix 1011D with manual reprint. Will not load up correctly. Receiver aligned and TX aligned per service info in manual. I think the 8950 is unstable, and don't want to pay the price for a new one to find out.

Siltronix FD-1011A frequency display for the 1011D. Works, with manual reprint.

Prices:

1011C, Manual, Power Cord & Hand Mic - $125.00
Will trade for Midland 79-290 in good operating condition with Mic, bracket, manual and power cord.

1011D, Manual,Power Cord, & FD1011A Display - $200.00
Will trade for RCI 2950 in good operating condition with mic, bracket, manual and power cord

Will also consider older tube-type CB base rigs with SSB in restorable condition. These units show oxidation and discoloration on the chassis, also have paint chips on outer cabinets. They are not pristine, but could be put back into operation.

Mike - I don't know about the TV-7, but a TV-3 I just fixed had an open wirewound precision resistor in the movement - 832 ohms or something like that. Just open up the meter and check to see if it has the resistor - it ain't gonna bite you!

Subject: -----4KV 2.1amp transformer for sale------

(2) for sale- 4000 VAC with a center tap- 2.1 amps CCS, 175lbs, see pic @ http://members.aol.com/jimmoci/trans.jpg Yes,thats a 3-500Z as a reference for size in the pic. These transformers are very big and have alot of duty cycle. They are removed from 5KW HF Jammers used by the military. They have multiple taps from 208VAC to 240VAC so voltage can be changed + or - a couple hundred volts to suit your needs. It also has a center tap. $250 each. They weigh 175lbs each so pick up near Philly is required. I will be at the Trenton/DVRA Hamfest and the Baltimore/Timonium Hamfest so I can meet someone there with them also.
Thanks for looking,
Jim

From: "Patricia Gibbons"
Subject: Anybody collect xtal-controlled reeivers?

I have an AN/FRR26 which was made by Kaar Engineering back in 1959
it is a single-channel receiver that was designed for the 2-8 MHz range,
and was also designed to be operated locally, and via a 2-wire,
metallic-pair
phone line.. control voltages and currents were applied between either of
the
two lines and ground for controlling BFO on/off , BFO pitch, and RF gain..

The one I found was new in the wrapper with the manual, extender cable
for servicing, and the original factory acceptance test results.

The AN/FRR26 was built for the Navy and appears to have been a shore-station
receiver that was rack-mounted ..

Anyone else ever run across this model ??

EJ (KC5EPI)

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters.
Looks good and works well. $175

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord
and mounting bracket. Looks and works Good. $100

Swan 14X DC Power Supply Module: No way to test but was told it was working OK.
As is $45.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $60.

Marantz Model 2220B: Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $175

AR Inc: Stereo Amp, All solid state. $100. Please don't ask the model #. I have been asked this many times and unable to locate on the name plate. The serial # is: AA002291. It comes with the optinal wood case the face is Gold Alumi. With the following controls: Mode selector, Bass, Treble, balance and volume. In the upper left corner is a red LED and on the bottom right is a normal/monitor switch. I would rate it a 7 on appearance.

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $115 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

RS Pro 30 Scanner: Hand held 16 channel Digital scanner. Looks & Works good, but the battery cover plate is missing $35.

From: Tom Turnbull
Subject: Heathkit RF Gen IG-102

I've been given a Heathkit RF Sig Gen IG-102 which is a little worse for wear.

It should have two valves but one is missing and the other is broken. Lots of shards of glass inside the case. From the bits I have been able to piece together I think it may have been an ECC81.

Someone has also been desoldering some of the capacitors inside, whether to try some sort of repair or to rob them for a project I can't say. I don't think any are missing just disconnected at one end. Otherwise all the coils appear to be in place - I should say I can't see where any are missing. The power supply appears OK.

Can anyone let me know what the valves should be and is there a schematic available anywhere on the WEB for this?

Tom.

i only know of 1 Wehrmacht set which used 4 of the RE 074 d, it was
the E 373 Bs from 1934 (also called "Tornister-Empfaenger" because
it could be carried like a rucksack). in comparison, the RE 074 was
contained in quite a lot of army sets, but it's not a space-charge
tube and operates at a Vp of ca. 150 V (which is 10 times as high).

cheers -
Herbert

hi Herbert

seems I misunderstood that it was space-charge valve, and DL2IE's book
confirms that you are right
see: Kommerzielle Nachrichtenger&#65533;te von 1914-1945 by Gerhard B.
Salzmann DL2IE - available from DL6VW W. Gierlach
I wrote a letter to him to note that some valves were missed, this
might be added for later version of the book, some valves in

but it is always easier to find faults than being correct, hi

Also bought the book:
"Zur Geschichte der RV12P2000", but can't remember where I got it
from, don't think it was GFGF, actually, but some friends now want to
buy it....

seems that grid 1 need to be sufficient poistive, but whether this
means 'connected to cathode' or 'has a smaller positive voltage' may
depend on the valve

found the circuit so you can have a copy of 'my circuit' if you send
me an email

>it went. Thought I'd ask some advice here before I got very far into it.
>Thank you for your consideration. Respectfully, Stinson

No, it won't work on 12 volts without the adaptor. The adaptor is basicly an inverter/rectifier that supplies the high voltages needed. You might be able to build one, but the transformer would probably cost more than finding one made for it.

What kind of info are you looking for ? There are a number of web sites that have pictures and descriptions of that radio. I found them by searching for AR88LF. There are also schematics on the web for free for it. I obtained my AR88LF last month. Your right about the weight.

Hunter's address (at least in June 1972) was:
Hunter Sales, Inc.
Box 1128E
University Station
Des Moines, IA 50311

I am running an old Hunter Bandit 2000C linear that was handed down to me
from my father nearly 20 years ago. He bought it new in 1968.

Hi, Gang,
My hat is off to Gary - KJ6Q for writing this piece. The subject is a great strawman document to comment on. It touches lots of minds, some good and some bad. But, then, what's new about that? So, I'll add my point of view.

I got my General way back in 1952, at age 16, and held it until 1968, when out of boredom at age 32 I gave it all up. Why? Partly because all I heard in those later days was a lot of SSB stations piling on top of us AM stations who could not afford SSB. Rudeness and swearing prevailed on almost all of 80m in my location. I could not get up on 20m or 10 - didn't have the cash. Lack of cash certainly made the hobby difficult, but the killer was the way the hams acted back then, especially the older hams.

Back then, CW was the only mode you used in order to cut thru the qrm, or static. Even SSB had trouble getting thru, despite what the pros said. But CW somehow made it thru the mess. That is, if you could afford the receivers that had great filters, like the Collins type. The best my rig could do to receive a CW signal was listen to it thru a 2K wide filter. It was a wonder I could pick a CW signal out of the caconophy of sounds with such a wide filter, but somehow I managed. Not all the time, but enough times to participate in the hobby on CW. I liked CW for that reason. Besides, you almost got to know the other person by the FIST he had. Well, at least you could imagine what he was like in your minds eye. In those days, voice, too, was like listening to your favorite radio program. Your mind imagined what the person looked like, and what his personality was like - just from the sound of his voice. And when the band choked up with qrm, you switched to CW and continued the qso. Few could afford RTTY in my town, so RTTY was only read about in CQ or RADIO mags. I was good at CW back then.

When SSB became the way of life, AM was doomed. Especially with my rig. CW, however, was still the only other way hams could communicate - especially with my wide band receiver.

As the years went by, I got on the radio less and less. I had become disenchanted. By 1975, ham radio was a distant memory to me. My license had lapsed several years before, and I never thought enough about it to renew it.

My life was picking up pace in other areas; mad affairs, lots of kids to raise along the way, and oh yeah, a wife. I never gave ham radio a thought. I dumped all my gear somewhere, maybe gave it away, whatever. Who cared. My ham radio memories had left a bittersweet taste in my minds imaginary taste buds.

The years continued to slip by, and I got into electronics in a big way. Won't bore you with all the details, but suffice it to say, I was involved heavily in Silicon Valley startups. Lots of cutting edge technology work came my way. Big thing I got into was computers, transistors, and the like. Made a good livin out of it all, too.

Then, in 1975 I got linked up with a company that made equipment for broadcast television. A new era of learning for me was born. Lots more computer stuff, cutting edge equipment was part of my design and so on.

Ham radio? Who cared. Never gave it a thought.

More years raced by. Then in 1985 I evolved into another area of computing - electronic email. I could instantly communicate over telephone lines to anywhere in the corporate world. And if that wasn't exciting enough, I had a 5 lb cell phone (that was all they had back then) to carry around with me to communicate vial radio to anywhere in the country or overseas. I thought I had arrived.

Where was ham radio? Never gave it a thought.

Still More years passed, and that cell phone shrunk to a size of a brick, then down to something a little larger than a pack of cigarettes. Computers came out of the woodwork in all shapes and sizes. In the 80's it was awesome to have a 486 computer with 50mb of hdd and 5 meg of ram. Windows was coming on strong, and in the beginning of the 90's the Internet was gaining fast as the way to communicate to anyone in the world, albeit, via pokey 14kbd modems attached to the phone lines. Soon, 56bbd modems hit the street, and wow, was the Internet fast! Well, until AOL and the rest of the world got on and slowed the thing down to a crawl. Suddenly bandwidth was the looming issue.

Where was ham radio? Never gave it a though.

Well, in 1994, my xyl of 43 years, who first knew me as a 19yr old snot nosed kid, the same xyl who, when I married her, objected strongly to my ham radio hobby because it "took too much time away from her, and later the kids," that very same person, said to me one day while I was tweaking my latest 3D card in the computer in my home office, Honey, I was reminiscing the other day, and remembered the days when you were a ham, and how you used to take the kids and I on those, what do you call them?, oh, yes, those Easter egg hunts. Remember? Yeah, I said, still tweaking the 3D card software to perfect my latest creation on my Paint program, what's your point? "Well, dear, I think you need to get away from this computer stuff and get your ham license back. You're spending too much time alone in this office working on computers and not enough time with me. At least you took me to those Rabbit hunts and shared some of your time with me."

In the back of my mind, I was thinking, That's not the way I remembered it sweetheart. You practically flushed my mike down the toilet one day. But I kept my tongue (after 43 years with the same woman, you learn some things).

But somehow, she planted a small seed in my mind. I wondered what was going on in the ham radio community. Maybe I should go get a license and become a

ham again after all these years. All I had for a receiver was a small Sony all band unit I bought a decade ago. So, I fired it up and began to listen to the conversations on 80m, and 20m and so on. That little rig could hear SSB real good. Impressing.
I began listening to the last band I used way back in 1952 thru 1968 - 80m. To my amazement, it was like going back in time, as I listened to a bunch of rude, people lambaste one another and swear up a storm at each other - right there on 80m! Again. Do I want to get a ham license for THIS? To be sure, there were lots of so called, "old geezers" mouthing off, but young people were doing it, too.

Undaunted I tuned the little rig to 20m. After a few days, I noticed a more orderly conversation pattern there. I rarely heard swearing or observed rude behavior. Oh, of course, I did hear a few Lids, but it was not pervasive like it was on 80M. This was the band for me to begin my Ham Radio experience on. I went for my license in late 1994. I decided not to fool around and go for the General. I worked hard to get my fist and 13wpm listening up to par. It was a struggle.

During this effort, my mind went back to a day in 1952 when I had to learn to send as well as receive 13wpm for one minute without errors to get my General. Somehow I did it then. But, one of my friends was not so fortunate. Let me say that in high school I was the typical 15 year old with hormones that took over every chance they got. My school work was barely adequate. But my friend, you see, was the school genius in everything. Math, chemistry, language, History, and Electronics. He was as egar as I was to go take his test. He did not have to study for the theory. He knew it cold, formulas and all. He could design by himself, just about any complicated circuit there was. He actually designed on his own a complex receiver and built it, and by heaven, it worked great. Yet, when it came time to take this CODE test, his brain hand coordination did not seem to work well. Not that he had a disability, it was just that, well, he struggled to get even 5 wpm. Like lots of people did, and still do.

My genius friend took the code test 12 times, and on the 13th time he passed, barely, the 13wpm test and got his General. After that, he went on to build his own station and other gear, but never got on CW again. Yet, he was a true ham that contributed to our little community of hams by designing for us lots of experimental ham circuits.

Now, in 1994, as I studied, I remember Charley fondly struggling those 13 times to master his code, and somehow it made it easy for me to get there again. I passed my General, and three months later, I passed my Extra.

As I look back over my time in computers, the Internet, high end electronics, Broadcast TV, I kept asking myself, "why am I interested in ham radio?" After all, there is the cell phone, the internet, email to satisfy anyone's need to talk, including mine. So, why ham radio as a hobby?

The answer for me lies in the mystery of radio waves itself and my control over them, from my own QTH or mobile.

Consider this: Cell phones are commercial, using commercially built components (costing thousands of dollars) I had nothing to do with, except fork up my monthly bill for using the equipment. The Internet uses commercial telephone lines mostly to communicate to others. In fact, I noticed that every form of present day communications, except CB, and Family radio, are commercial enterprises you must buy into and have no control over the path your voice takes to get to the receiver.

But there is something wonderfully mysterious about those radio waves that emanate from my very own antenna in the back yard that can reach everywhere on the earth simultaneously, even bounce off the moon or capture a satellite as it passes overhead.

After I think of it that way, what a thrill it is to put a station together, erect my own antenna, and call CQ CQ. It does not matter whether it is in CW, SSB, AM, FM, RTTY, Amtor, Gtore, Pactor, PSK, SSTV, or TV, or Laser, or mazer - I can do it all from my back yard. And I can contact anyone on this earth and talk to anyone for hours free while connected only by the simplest of antennas between his rig and mine. The mystery of it all never ceases to amaze me, far more than the complex equipment I am used to. Far more than the twisted pair that leaves my house, and goes God knows where to what ever landline, or commercial satellite - faceless zeros and ones packeted between a twenty dollar bill, no doubt.

No! I think this hobby has a never ending future. Think of it. The armature ham operator / experimenter can harness the very forces of nature itself - to bridge a direct cosmos like communication path between anyone. To me, THAT is the thing that should draw new inquisitive talent to our ham radio ranks, just like it did my friend Charley, who flunked the code 12 times before he got it right..

It is the experimentation of it all, of the ham gear, whether bought or build by hand.

And all of it culminates out there when you look out your ham shacks window at that antenna in your back yard (emanating those mysterious electrons) as you carry on a direct rag chew with someone 10,000 miles away. Not through the easy commercial paths, but Thru sunshine, thru clouds, thru heavy storms, thru God knows what cosmic bombardments trying to dislodge your signal. Yet, you somehow make it through.

All from your own back yard.

Where was ham radio? Its been here all along.

Regards,
Tom - AB5ZJ

4783. New Active Portal on Arts - Radio - Shortwave

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-25 00:00:00 UTC
From: reporter@active-portal.com
Message-ID: <20000325033253.9044.qmail@ftp2.hostme.com>
Source record: 69088
Cross-posted to: rec.radio.swap,rec.radio.shortwave,rec.radio.amateur.boatanchors,rec.radio.amateur.dx

We have developed a new Active Portal web page on

Arts - Radio - Shortwave

It has links to hundreds of pages. Please check it out! Thanks.

The address is:

http://www.active-portal.com/cgi-bin/genpage?cat=1042156

This page has been developed as part of the Active Portal
Project in the Computer Science Department at the University of
Wisconsin, an ongoing research project.

An active portal is a page devoted to a particular topic
but with a difference.

The active portal is seeded with a number of a pages known
to be about a topic. A search agent then learns the
characteristics of those pages and then seeks out similar pages.
This search agent runs automatically and continuously. Thus the
active portal, unlike manually-compiled portals like Yahoo,
continually discovers new pages about a topic. In addition,
it ranks a page based on a combined measure of its popularity
and content level.

The active portal also features a sign-up box for a mailing
list that is used to alert its members to new pages that the
search agent discovers.

Please feel free to reply to this message with any comments.

Best regards,

Matt Zeidenberg
University of Wisconsin
Computer Science Dept.

Don't try to avoid the main issue -
> which was your "throw in the towel" response to a perfectly
> legitimate e-mail you received regarding how to get more people involved
> in the hobby.

MY "main issue" is that COMPETING technologies are by FAR the greatest reason for reduced numbers of younger hams into our hobby - how did you miss THAT bit of information, perhaps the same way you managed to magically read CW into it? And don't try to tell ME what the "main issue" was - *I* wrote the original post, remember?

>
> Do you, or don't you agree that we should at least TRY to get more
> young people involved in the hobby?
>
> YES, or NO?

Not so sure ANY "crusade" we might conduct - OR more reduced entry exams will do the job - or that anything other than maintaining as high a profile as possible before the public will have much effect - I don't REALLY think lack of general awareness of ham radio to our youth IS the problem - as I have stated, I believe they just have too many OTHER electronic attractions that appeal to them more than the notion of a private amateur radio station. Shucks, they can sit down in front of a computer, enter into a chatroom, and "talk" to others their age (and interests!) anytime they choose - what do they need ham radio for?

For THAT matter, why are YOU AND I *here* now, instead of "on the air"? Because we PREFER here to amateur radio, at least for the unique activity and exchanges NOT available in ham radio - JUST LIKE the kids!

>
> If your answer is no, then there is no use continuing this
> conversation.

Since you have so much trouble with simple concepts, THAT assumption
was already pretty obvious!

>
> If your answer is yes, then I put it to you again - come up with
> something constructive to try to make it happen... or help those
that
> ARE trying to do something constructive. Don't put up another smoke
> screen.
>

AGAIN, what a JOKE, from the very guy we couldn't shut up with HIS
determined effort at diversion on the CW issue... Who do you really
think you're kidding here?

4785. FS: Antique Radios

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-25 00:00:00 UTC
From: Marv_E_Ads@Juno.com
Message-ID: <8bhdnidda1@nnrp1.deja.com>
Source record: 69090

********** ANTIQUE RADIOS **********

listed more or less by year of manufacture...

Stewart Warner 345 TRF (1926) outside good, inside immaculate w/all tubes, likely functional, requires an external power supply (or batteries?) which I don't have. $150

RCA Radiola 18 TRF (1927) good looking wood cabinet w/all tubes and copy of service manual. Missing line cord; should be cleaned and checked over before powering $100

Atwater Kent Model 38 TRF (1927) needs some work $100

Several Atwater Kent model 40 TRF's (1928) ranging from abysmal to functional condition $25 - $75 ea

Hallicrafters S-53A (late 50's?), very clean; I think the miniature phone jack on the right side of the cabinet is "aftermarket", w/copy of Sam's service manual. Working $125

All of the above plus shipping if necessary, naturally! :-)

Contact Marv, WC6W, 310 649 3111 (reasonable hours Pacific Time please) or via: Marv_E_Ads@Juno.com

From: Philip Neidlinger <philip@premierweb.net>
Message-ID: <%bXC4.28$3Y.1046@news2.randori.com>
Source record: 69091

I heard that someone had developed an ac inverter and or replacement battery
pack for the Zenith Transoceanic that
fits inside the case.

Any ideas where I can find one. I'd love to take mine on the road.

Philip

4788. Homebrew tetrode RF deck FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-25 00:00:00 UTC
From: Lane Ku7i <Ku7i@worldnet.att.net>
Message-ID: <bHYC4.2867$ma1.212571@bgtnsc04-news.ops.worldnet.att.net>
Source record: 69093
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

This RF deck uses a 4CX1500B and comes with a spare 4CX1000A. Built by a retired EE here in San Diego. I am only selling the RF deck (fully operational), the 4CX1500B (full output), spare 4cx1000A (full output) and the screen supply which has taps for 150, 250 or 350 vdc. You supply your own high voltage supply. With 3500vdc (3100 under load) this amp running the 4CX1500B will do 1500 out with 40 watts of drive with zero grid current. Covers 160 to 10 but on 10 the bandswitch arcs pretty bad so I only use it on 160 to 15. Uses a pair of UCXF 700 vacuum variables in the output tank (700pF at 10kV). Beutiful turns counters on the two vacuum variables. The coils is a fixed tapped design (Johnson 232 series) and uses a rugged bandswitch. Homebrew plate choke. SK-800B socket and chimney. Dayton 4C004A blower. Tube is in a pressurized compartment. This amp is really built well and very easily does the legal limit. Typical values are 40 watts of drive, 1500 watts out, plate current of 840mA, plate voltage of 3100 volts, zero grid current, 350 volts on the screen, and less than 10mA screen current. Sorry, no pictures available.

The deck is built onto a sub-chassis that is about 4 inches deep by 17" wide by about 15" deep. The front panel is a 19 inch panel with rack mount screws and fits into the same size BUD cabinet as the 75A4. You supply the cabinet. Screen supply mounts externally. Connections on the rear of the deck are for RF in and out, T/R relay, multi-pin connector for various power supply voltages (screen, B-, 120 vac to rf deck, etc.) and ALC.

There are several partial schematics but not one totally complete scat. Lots of various handwritten design notes and circuits so the end-product is a combination of these. You will need to draw the schematic from reverse if you want to figure out exactly how this deck is wired. He did a professional job on the wiring and it looks great.

Prefer pick up so I can op test the amp for you. Price is $575 shipped lower 48. Remember, you supply the high voltage supply and cabinet for the RF deck. Will professionally double box the amp and tubes and ship seperately via UPS ground.

FS clean Drake W-4 Wattmeter. Has 200 and 2000W scales. Accuracy checked A-OK.
Some paint blems on the top and side of the case, but the front panel is excellent.
The pickup can be remoted. Plus, the SWR card is with this one! $70 shipped CONUS by mail.
73, K4GJ

4795. FS Drake R4-A Receiver

Nice example of the Drake R4-A receiver. Has all the filters built in,
unlike later models. Very sensitive on all ham bands.
Has 4 extra crystals in the AUX, but I don't have a manual to know the extra
coverage.
Less manual. Clean unit in very good condition. Just a few small blems on
outer case. Front panel is excellent, quiet controls. $ 195 plus
shipping

From: "D. S. Platt" <jeepp@erols.com>
Subject: 3-400Z/3-500Z Question?

I have a bunch of 3-400Z's that I believe will operate just fine in my
Drake L4B's. The book lists the 3-400Z when it discusses idling
current, etc. Other than a lower dissipation, the tubes look
(specifications) pretty much the same. The Eimac/Varian book seems to
say the same thing. Any experience(s) out there? Thanks much.

From: Matt Erickson <kk5dr@hotmail.com>
Subject: 3-400Z/3-500Z Question?

The 3-400Z is a virtual twin is the 3-500Z, the only differnces are of
course the lower plate dissipasion, and slightly smaller size, but also,
it has slightly higher gain(a function of the closer spacing of parts
inside).
Plug in the socket and use it, it might surprise you, how will they do.

Subject: FS SWAN 350 & acces.

FS SWAN 350 (loaded)
FS Swan 350...410 remote VFO...vox...selectable upper and lower sideband...calibrator...speaker pwr supply...rig is a real beauty..front panel is flawless...case is beautiful...chassis is free from anything...high serial# near the end of the line.
The 410 remote vfo has a paint scuff on the right side...I placed my qsl card over that area...front panel of the vfo is perfect...pwr supply & speaker is also beautiful...comes with the original manual.
I operated this station for 3 years without any problems....occasionally I would have to spray the volume control with DeOxit cleaner.....power output is over 200 watts key down on cw and over 400 watts on ssb...$300 plus shipping...depending where ur at it could run as high as $40 UPS...equipment is heavy.
If you let this rig warmup at least 45 mins..its as stable as a rock..trust me.
Reason for selling...my 50`s station is taking up all my room.....tnx

The design was licensed to several manufacturing locations. I know of
Camden, Chicago, and Canada. There was a diversity model too, the DR-89.
Most production went overseas, so they are a little rare in USA. A great
reciever, imho

From: stinson108@my-deja.com

Subject: SWAN 500 (How to use on 12 VOLT?)

I need some insight here from some of you SWAN operators. My present ham shack has no electrical power and I operate from batteries and solar cell. The old 500 now sits idle and I have no DC module to attach to it. Can I wire a plug to the JONES plug so it will operate without the module? Obviously there is no problem with engine intererence or voltage spikes from the batteries. Does the module provide high voltages that make it essential for DC operation? I made one attempt to power it up and got the tube heaters lit and could hear that the audio amplifier was alive, but that was as far as it went. Thought I'd ask some advice here before I got very far into it. Thank you for your consideration. Respectfully, Stinson

I have a Johnson Ranger I. Supposedly it is fully operational. I have owned it for about a month. I have used it once on 75 meters but discovered that there is a bad audio feedback problem. when the audio gain pot is cracked open just a little bit there is terrible audio squeel and it sounds like motorboating or something. The output is full on all bands (cw mode used to verify). About 70 watts on all bands. Other than the squeel is seems to be okay. The front panel is fair. The paint is decent but is worn off pretty good around the stby, cw, am switch. If the paint was not worn so bad around this switch I would rate the front panel as a solid 8 to 8.5/10 but since it has this problem I will call it a 6 to 7.

Cabinet is fair. There are some extra holes in the rear. No serious dents of gouges on the front, top, or sides. Overall cosmetics of cabinet are fair. I have a copy of the manual.

I am selling because not only does this xmtr need some fine tuning but my DX-100 needs major work. Rather than be split btwn the two I would prefer to sell this.

$235 shipped lower 48. I paid more than that for it a month ago.

FS: Drake TR-4 80-10 Meter HF SSB/CW Transceiver. 300 Watts transmitter input power. Includes AC-4 Supply. I listened to SSB and CW signals on all 5 bands, and heard many DX signals in the WPX Contest on all bands. The transmitter was tuned up on all 5 bands, and seems to put out good power on all bands. All original knobs, no known modifications, no extra holes. The case is in good condition, with a few scratches on the top, and the front panel is in very good shape, with no rub marks or missing lettering, etc. Overall, a nice rig. From an estate sale, $215 plus shipping from Portland, Oregon.

The family of a local who recently became a silent key has asked me to list the following equipment for sale. I have not tested any of the equipment, it is all sold as-is. UPS shipping from Portland, Oregon is not included in the prices.

Hallicrafters Transceiver Mobile Power SUpply Model PS-150-12 $30
National Mobile Transceiver POwer Supply, Model # NCX-D $30
Morrow Mobile Receiver (non-original knobs, no P.S.) model MBR-5 $40
Morrow Mobile Transmitter, no P.S. model MB-560 $40
Swan 140 mobile transceiver, SSB, 40-Meters, no P.S. $45
Swan 240 mobile HF SSB Transceiver, 80/40/20 Meter bands, no P.S. $75
SWan 250C 6-Meter SSB Transceiver, no P.S. $175
EICO Electronic CW Keyer $25
Shure 444 Microphone with SWAN Label - $35
Kenwood TM-211A 2-M FM Mobile Transceiver and matching Mobile Speaker $100
RME Receiver Preselector 80-10 Meters, nice condition, missing rubber feet, $35

Heath SB-200 HF Linear Amplifier 80-10 Meter bands. It has a big hole cut into the top of the outer case and a muffin fan has been mounted directly on top of the final tubes area. $225

Johnson Viking Ranger I, has an antenna relay mounted on the back of the case in a Minibox. All original knobs and meter. $210

Drake UV-3 2 Meter/220 MHz/440 MHz Tri-band Transceiver. Has the remote head mount cable kit, but someone has cut the cable in two. Includes the Drake Touchtone microphone, but is has been wired for some other kind of transceiver. The transceiver front panel has the original plastic covering on the control head, but it has started to peel off and needs to be finished peeling off. $350

Coming up later: Johnson Viking Ranger II, Hammarlund HQ-170 Receiver (excellent), Johnson Viking Invader 2000 Transmitter (just about like new!), Hallicrafters Hurricane SR-2000 HF Transceiver and matching power supply, Collins 75A-4.

My own stuff: Motorola and GE Equipment: 72-MHZ GE MASTR II and MICOR base stations. GE VHF MASTR II 110-Watt VHF Base Stations, 200-Watt UHF Repeaters, VHF Mobile radios. GE UHF and VHF MVP mobile radios. GE M-PD and MVS VHF and UHF Radios. GE Phoenix-SX VHF and UHF.

The local family of a recent silent key has asked me to list the following equipment for sale. The equipment is not tested, so it is sold as-is, and prices do not include UPS shipping from Portland, Oregon.

Heath VFO 160-10 Meters, Model VF-1 $65
Heath "KW Compact" HF 80-10 Meter Linear Amplifier, with AC and DC Power Supplies $400
Yaesu FT-7 HF SSB/CW Mobile Transceiver, 80-10 Meters $215
Johnson KW Low-Pass Filter $15
Drake TR-4 80-10 Meter SSB/CW HF Transceiver with AC-4 AC Power Supply $215
Heath Q-Multiplier with Manual $15
ICOM IC-22/U with Remote Mount Kit $200
Kenwood PS-50 Power Supply for Kenwood HF Transceivers (TS-430, TS-440S, etc.) $100

4829. Do you want your Johnson 500 to look like new?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-26 00:00:00 UTC
From: jimmoci@aol.com
Message-ID: <20000326093007.23045.00000890@ng-fd1.aol.com>
Source record: 69003

Dear Johnson 500 owners,
I ran into a gentleman (Dee- W4PNT) at the Timonium hamfest this weekend that refinishes Johnson Rangers and Valiants. His work is excellent and the finished product actually looks better than original. The silkscreening looks great and the color match seems to be right on! I asked him about doing my 500 but he said that he needs to do a minimum of three to start doing 500's. His work does not come cheap (Its a bargain if you know how much time and detail goes into refinishing one of these things) but the end product is well worth it and it will only enhance the resale value of your $1500-2000 dollar radio. I would like to get mine refinished but I need two (or more) other willing 500 owners to
take the plunge. If you are interested and not shy about spending a few bucks to make your 500 look like new email me.
Thanks very much,
Jim

Hi Larry.

I'll take the SB-200 and am real tempted to take the UV-3. If it doesn't go and the price comes down, let me know.

This receiver is in excellent condition, cosmetically and electrically, working FB. Rackmount. Unmodified. With manual. What is it worth in USA, as I plan selling it? I posted(?) this message this morning but cannot find it on the list. Doing something wrong, I guess. I'm a brand new beginner, sorry.

Concerning For Sale, Auction or Trade posts
to Usenet newsgroups which allow sale posts:

Conventions have evolved to help users separate
and/or filter Trades, Auction sales and Direct sales.

Sale posts that involve auctions should be titled "FA:,"
i.e. "FA: Five 6L6G Tubes."

Direct sales should be titled "FS:,"
i.e. "FS: Heathkit Preamp."

Posts offering items for trade should be titled "FT:,"
i.e. "FT: Zenith for Philco."

(note: Posts concerning an item wanted are usually titled "WTD:")

Thanks very much for your help and
your kind courtesy to the other users.

My father was a Radio Operator in the 81st Signal Company (The Wildcats Division) and in action on Anguar and Peleliu. As part of his 75th Christmas, I reconstructed a receiving station using equipment lists for the 81st Signal Company I found in the National Archives. The main component is a BC342 receiver. Repairing the radios and getting everything back to 1944 Specifications was hard, but it all paid off when he shouted "Where did you get that!" on Christmas morning.

Yes, the BFO is a bit weak and its hard to dial in 9.375MHz, or whatever, without a bit of guesswork, but it was fun. I learned some history and my father got to relive a bit of glory.

Thanks for the hints!

We don't get the magazines you mention in local libraries, I'll check for matching
websites or wait til next time I come stateside.

>> And allegedly they made BC-348 copies into the 70s also

I had never heard that. The BC-312/348 were also supplied to Russia during the war, and I think some had to bear Russian language markings. I think there may be room for justified confusion! Judging by what I've seen so far, it seems to me that Russia did develop all sorts of tube radios over the years. I think they were more constrained on the manufacturing side than in enginnering new (basic) designs. In a sense, they did well in doing DFM/DFS (design for manufacturing & servicing) adapting to available resources.

In my own country (Italy) the Army still used 348's in the 1980's - and I'm in the process of buying one!

HELP, PLEASE. I'm looking for a Johnson power reducer that they made to pad down the output of the Viking Ranger in order to drive a Thunderbolt amplifier. There were, I believe, a couple models, one that reduced the output by 3dB, another by 6dB and one that was switchable between the two???

Anyhow, if you have one you'll sell, please contact me.

Thanks,

4876. RA-87 - what is it?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-27 00:00:00 UTC
From: Richard Hankins <richard.hankins@nt.com>
Message-ID: <38DF9917.2E59AA39@nt.com>
Source record: 68946

Folks,

a friend of mine has been offered a "Rectifier type RA-87". Its apparently on sale (in Holland) along with a BC-191 Tx. I don't think there is any connection between the two, since the BC-191 mains psu is the RA-34B.

Can any tell me what set(s) the RA-87 was used with? All the usual boatanchor sites (millist, etc) don't even recognise this type number.

Thanks

Richard

Looking for a chimney for the old 4-400.
The Eimac # is 4006. Anybody got one they
can spare?

Jim w9ud

RA-87 is a land line teletype loop current supply,
issued with several sets that use the same machine
as the Teletype model 15 and model 19 sets.

Kind regards,
David Stinson AB5S

Don't make me laugh. You act like it is a branch of the Armed
Services. Of course it is a hobby AND a service. But you
are "misconscrewing" the term "SERVICE". In FCC-land, there is the FRS
(Family Radio Service), the GMRS(General Mobile Radio Service), and the
broadcast services. All this means is that the government has
to "service" us. We don't "serve" nobody.

Nice condition Johnson 275w matchbox. This is a quality tuner built like none you can find today. It has a much wider matching range than modern tuners and is great for open wire lines. Tuner also has built in TR relay. Rated 250w AM or 750w PEP. Includes copy of manual.

Hi...I'm posting from rec.antiques.radio+phono...we prefer not to have
auction posts, figuring that Ebay is perfectly capable of handling it's
own advertising, and has this really nice search engine built into it.

We're currently having a minor war with a couple of people who seem to
insist that its their constitutional right to post their auctions in
the face of 90% of the people in the group asking them not to.

Boat Anchor class, ALL tube O-Scope. No Probes or Manual. Could probably use Calibration & Control Cleanup due to it's age. Overall in Good shape cosmetically & electrically. $50.00 plus shipping from N.Y. City. The CRT alone is probably worth the price.

TNX

Thank you for your gentlemanly response.

I'm sorry to hear that the r.a.r+p group has failed to settle
this matter as we have on the ham groups.

StarChaser Tyger wrote:
>

> auction posts,....
USENET news group charters that allow sales, allow auction sales.
They make no distinction.
The definition of "hawking" is irrelevant, since all sales notices
fall under that definition. Complaining about it is pointless.
You might as well curse a rain storm for raining.
FA is here to stay.

> We're currently having a minor war with a couple of people who seem to
> insist that its their constitutional right to post their auctions in
> the face of 90% of the people in the group asking them not to.

I have followed this "war" on r.a.r+p. As it was on the ham groups,
the actual complaining is being done by a very small but vocal minority.
As on the ham groups, the majority know that this is a simple matter
of setting filters. That is why the "FA, FS" convention came about-
it fixed to problem for all reasonable people.

It is selfish and inconsiderate to demand that the majority,
which appreciates FA notices, be denied them to satisfy
a few complainers- whose motives are considered suspect,
at least in the ham groups. Such complainers on the ham groups
are now quickly reminded to use their filters and not start
another big, pointless fight which can only be destructive.
Newbies are politely asked to use the "FA,FS" convention.

I continue to be astonished that grown men who have attended
auctions all their adult lives continue to create hate and discontent
over an auction. Auctions are here. They will stay here.
Please set your filters and live in peace.

Kind Regards,
Dave Stinson

> yourself. It says 'This is not a place to hawk your wares'.

Nor do I, but I will say this: Just before that "hawk" passage,
practically in the same breath, it says that sales are permitted.
The two statements are mutually exclusive and therefore meaningless-
you can't have it both ways. In any event, the FA posts will
continue. It's better to follow the agreed-upon convention
of using "FA / FS" so everyone can live in peace.

Kind Regards,
Dave S.

(Why do people who claim to be offended by FA posts
continue to click on and read them? They don't read
every single word in a newspaper, and they don't
complain about that. It just don't make sense
and fighting over it is even sillier...)

(Warning- sense of humor required to read further)

I saw this and thought it was cute-
you might get a chuckle out of it.

NEW EXTRA CLASS RADIO AMATEUR EXAM POOL QUESTIONS

(Special thanks to YaeComWood for creating this test.)

Valid after 15 April 2000

1. A "resistor" is
a. The girl you dated in high school.
b. What your dad was during Vietnam.
c. Those long, round stripy things in my base station.

2. A "capacitor" is
a. A small green worm that eats leaves.
b. A meter for measuring how much beer you can drink.
c. That thing in the lean-yar that smokes when you ratchet jaw.

3. A "tank circuit" is
a. That tiny little shirt girls wear when it's hot out.
b. Going from bar to bar and back again until you fall down.
c. The thing that turns red and melts after #2 happens.

4. You can use a satellite to
a. Watch reruns of "MAUDE."
b. See in the dark while riding a horse.
c. Shot skip without a lean-yar.

5. "CW" means
a. Corn Whiskey
b. Can't Win
c. Continuos Wave (good-bye).

6. A "Control Operator" is
a. The truck dispatcher on channel 23.
b. The head surgeon during your gall bladder operation.
c. Whomever is holding the power mike and echo button.

7. If you are shooting skip and your radio quits, you should
a. Send it back to the factory.
b. Send it back to the factory.
c. Send it back to the factory.

8. What does the good operator do when someone is ratchet jawing?
a. Key down for several minutes, saying "shut up, stupid."
b. Call him on the phone and threaten to kill his dawg.
c. Call his girl on the phone and go party while he jaws.

9. During an emergency net operation, you should
a. Test your base on the net freq so you're ready to help.
b. Shout "break break break!" and then ask "what's going on?"
c. Go get a cup of coffee and stay out from under foot.

10 What does "ARRL" stand for?
a. "Amateur Radio Really Lost"
b. "All Righteous Radioers Left"
c. "Ain't Real Radio, n'Longer"

SCORING:
Ten points for each question answered "C."
Nine and a half points for each question answered "B."
Nine points for each question answered "A."

75 points or better passes.

Source record: 69029

Here's what I'm looking for: handheld-type battery-operated calculators, mostly the LED-type calcs from the 1970s, the ones with the reddish, blackish screens, often with glowing red numbers, as opposed to those you see most often today, with their typically grayish LCD screens (except for HPs -- love em w/ any screen!). I'm looking for all makes, all models, as long as they are cosmetically clean -- see partial list below. (The only calcs I don't care for are those made by Texas Instruments.) Anyway, if you've got the old manuals, cases, chargers, so much the better. Just drop me an email (floetay@aol.com) and let me know what you have and the condition it's in, and we can go from there. Thanks!

Calcs I'm interested in buying include, but are not limitted to those made by: Hewlett Packard (all models, both LED and LCD), Adler, American, APF, Apollo, Aries, Aristo, Berkey, Brother, Busicom, Caltronic, Candle, Citizen, Colex, Columbia, Corvus, Craig, Crown, Dataking, Decimo, Dictaphone, Digicomp, Dixon, Edmund, Enterprex, Facit, General, GIC, Hanimex, Hermes, Iain Jones, Ibico, JC Penneys, Kingspoint, Litton, Logitech, MBO, MITS, Master, Melcor, Mintron, Monroe, Omron, Ordibel, Panasonic, Pico, Pye, Ragen, RBM, Regan, RFT, Ricoh, Royal, Samsung, Sanyo, Sears, Sinclair, Spectrum, Sperry, Summit, TKS, Toshiba, Universal Data, Verax, Victor.
Good golly -- can you believe there were once about 220 brand-names in all?

None of the WW2 Lend-Lease BC-348's and BC-312's were marked in Russian. The British/Canadian Wireless Set No. 19 (2-8 MHz and 230MHz transceiver) was made by contract in the US for shipment to the USSR in WW2 and they were made with bilingual front panels - English/Russian. (See the WS19 web pages at http://www.qsl.net/ve3bdb).

A BC-348 based receiver was manufactured in the USSR until the very early 60's and its Russian military designation is UC9. It looks very similar to the BC-348 and although the circuit is similar to that of the original but is not the same. I have one in my collection.

Source record: 69043

I picked up what looks like a rack mount radio made by National. At least
the Logo is on the front.
It covers from 28 MHz to 240 in 6 bands. To change bands, you have a series
of small round modules ,2 for each bands, with four prongs on each modules.
The tuning is done with an HRO type tuning dial. There is a Volume control
and a small calibrating chart to show reference to the various frequencies.
Did National make a vhf radio?
I can't find any reference anywhere.

I'm sorry, but your opinion is demonstrably incorrect.
All of the groups in this thread allow sales within their charters,
save r.r.a.p, to which it was posted because the
"FA FS" conventions are a matter of voluntary policy
on the ham groups, and are designed to keep the peace between
reasonable people. Unfortuantely, some people continue
to be unreasonable, causing fights by demanding
they be in charge.

Not if you read the charter by the moderator/person-in-charge at the host system of the hierarchy..... Only "rec.radio.swap" is for the exchange of equipment. (Such is attached after the quoted message I reply to.)

Just because "for sale" messages occur on those groups doesn't make it proper.

[Header abbreviated]
From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: List of the rec.radio newsgroups
Summary: This article provides a list of the rec.radio newsgroups; it is posted alternately with the longer "Guide to the Rec.radio NGs"
Posting-Frequency: Posted on the 1st of each month

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)

rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

The same US9 model. By the way, the 2 toggle switches you see on the front panel in that picture are not original - my receiver also had a switch put in by the original owner for the AC supply that was installed in place of the original dynamotor. Hams in Russia did the same thing to surplus equipment as here... The dynamotors were thrown out and replaced by power supplies. It's harder to find a dynamotor for a BC-348 or US9 than the receiver itself.

Your interpretation. Others differ. And it doesn't matter.
The posts will continue regardless of anyone's interpretation.
The only thing that's important
is that we learn to live together without all this fighting.
That's what the "FA / FS" convention is all about.
Personally, I detest and hate blind "make me an offer" posts,
but I don't raise Cain about it- I just pass them by.
When someone puts "FA:" on a post, it's easy as pie to just
not click on it. I don't read the furniture ads in my
local paper, but I don't cuss people about it, either.

Kind Regards,
D.S.

4929. FS: Pair of 572B tubes - Brand New

Hi All,
I have a brand new set of 572B tubes for sale. These are the Chinese tubes, but perform perfectly. I took them out of the box to test in an SB-200 and were full output. I originally paid $35.00 each. I will sell the pair for $60.00 + shipping.

Thanks,
--

I have an Isotron 20 meter ant for sale. I bought it brand new around 10 months ago or so and never put it up. It is assembled but has been inside ever since. No need for it anymore. I thought I would use them in a phased array but have since scrapped the idea. Like new. $55 shipped lower 48.

Plate xmfr. Primary has taps for 208, 220, 240. Secondary is 3300 or 4400 volts center tap (or 1/2 of 3300 or 4400 each side of center tap) at 1.75 amps CCS. Weighs about 150 pounds so must be pick up ONLY in San Diego. Dahl currently offers a copy of this on his commercial equipment web page for $785.00. This one is a commercial bdcst station pull. Made by Aiyden Energy Systems.

Price is $205 pick up only.

Hello:
Recently brought back to life an SX-115. However, am having an audio problem. With the volume turned up all the way I can only get normal to low audio into the headphones, but no audio out the 3.2 ohm speaker. I did have to install a new audio transformer, since the orginial was shot. Everything else looks good. Any ideas on what the problem could be? Currently trouble shooting it.

Source record: 68847

I have a rather nice Viking II and 122 VFO. The chassis of the V-2 is exceptionally clean and with new tubes. The front panel markings are umblemished but there is some scuffing on the edges. No dents, bends, folds, spindles, or mutilations, however. The system works very well and has a few of the audio mods (freq. response). The unit has PTT installed. Included are original manuals and 2 spare 6146W's. Pick-up in the MD/Washington DC area or maybe I can fly it up to 200 or so miles via GenAv. (AvGas is expensive..you know!)

Station For Sale: (Sorry, will not split-up).

Kenwood TS-180S w/DFC solid-state digital HF transceiver. Covers 160-10 Meters
(no WARC). Radio has 4 tunable memories. 100 watts out SBB+CW. Includes photocopy manual, Kenwood hand mike and DC power cable. Works great. Is older
Kenwood and has original paint with some scratches, but lettering on front panel is
perfect. A 180S picture is on my web site.

http://www.geocities.com/CapeCanaveral/Galaxy/6020

Kenwood VFO-180 external VFO. Matches above radio. Includes connecting cable.
Works great. In same cosmetic condition as the radio.

Kenwood SP-180 external speaker. Also matches the radio. Includes 3 passive audio
filters. Works great, in same condition as the other 2 pieces. Has built-in homebrew
HamComm RTTY interface with cable and 9-pin RS-232 (com port) connector. Works
very well.

Samlex SEC-1223 power supply. Small lightweight 23 ampere switching power supply
to power the Kenwood gear. Works great. Includes manual and box. Excellent condition.

Shure 526T pre-amplified desk mike. Works great, excellent condition, wired for the
Kenwood.

MFJ-941E Antenna tuner. Late model, dark brown, matches Kenwood very nicely.

All for $600. plus shipping (firm) US Postal money order only.

Thanks..... Mark W4UDX

>Filippo
>N1JPR / I2

Oh yes - lots of us.

Way back in 1974 or so, I rescued a near-perfect BC-348-R from the dumpster at the university I was attending. I needed a 6F7 and some alignment. Got the original manual, too. It worked fine except for those darn balck plastic capacitors failing every so often and burning up a dropping resistor or two. I got so tired of them failing that I collected a couple dozen historically-correct micas and replaced every one. I don't think I ever used it for an actual contact, but that receiver and my BC-221 got me 60 ppm average error in a FMT.

It was a standby and general coverage rx for many years, until I sold it to a friend a few years ago for $100, with the promise I could buy it back if he got tired of it. He hasn't!

The reason I sold it so readily was that about 1987 or so I came across a BC-342-N at a hamfest. It was on the club table - price $2. (That's right). I bought it, brought it home, hooked up a power cord and it worked right off. Needed a little cosmetic work and one capacitor change to keep it going all these years. It has the QST mods (resistor values in the front end and a 6Q7 first audio).

Back in 1996, a group of historically minded hams decided to put a special event station on the air to commemorate the 75th anniversary of the 1921 Transatlantic Tests. Bob, W2ZM, had built a replica of the Armstrong-designed 1BCG transmitter, and the special event call W1BCG was obtained. They would operate on 160 meters for several days in December of 1996.

I REALLY wanted to work them - but I had no operable 160 meter gear, nor antenna, and only a few days to get ready! I heard them right away using the BC-342-N. There was absolutely no mistaking the W1BCG signal for anything else. Working them was another matter - the pileup was fierce, and these guys had REAL 160 M stations.

I dug an old Johnson Viking 2 out of the junkpile and patched it back together well enough to get it going on 160. Each night I'd listen to W1BCG and work on the tx, trying to get it going before time ran out. My antennas at the time were a 20 meter ground plane and an 80/40 trap inverted V. I wound a pair of huge loading coils to end-load the inverted V, but could not get them trimmed

correctly to make the antenna work. I tried several niughts to work W1BCG, but to no avail.
My 20 meter vertical was the receive antenna. Finally I tried my 80/40 inverted V worked against ground (like a "T" antenna) and that loaded OK. No T/R system - just turn down the gain on the '342 when keying!

But I still couldn't break the pile. I noticed that they would occasionally work split to try for a transatlantic QSO, then go back to working on the transmitting frequency to work North American stations. They'd announce what they were doing at each change. I waited for a switch from working split to working on frequency, and was first in line. The thrill of hearing "N2EY de W1BCG" from that amazing 1921 replica transmitter cannot be described.

That was my first, and so far only, 160 meter QSO in 32 years of hamming.

73 de Jim, N2EY

What it says, in fact, is:

"7. Casual buy, sell, swap, and trade, of old radios and phonos, parts, are within the charter. Please keep in mind that this is a discussion group, with many non-collectors who have one or two items that they enjoy. This is not a place to hawk your wares."

People who contribute to the newsgroup and occasionally have a service or a single radio for sale are appreciated. People who post every bit of crap they've excreted onto Ebay whether it has to do with radios or not, and who contribute in no other way than whining about how they're allowed to post anywhere they want to and you can't stop me, are reviled. I see that a post by 'MIT' follows this one. He is one of the people that r.a.r+p are having the worst problems with, and I suspect it's the same thing he normally posts, something about crybabies.

<This does apply only to rec.antiques.radio+phono, BTW. Your mileage may vary.>

<Missed this first time around.>

Why do people persist in posting FA posts in newsgroups whose charters say they do not belong, where almost all of the regulars have stated over and over in no uncertain terms that they are not wanted?

EBay itself asks its auctioneers to be sensitive to newsgroups'
guildlines.

Last year I conducted a straw poll on rec.radio.swap concerning
whether readers liked or dislike auction notices. Of those who
responded, the results were about 50-50. Perhaps someone on
rec.antiques.phono+radio might consider doing the same.

My Adams has a problem from the day I brought it.

On AM the transmission is fine (4watts) and adjusting the mic gain has the expected results.
However, on SSB (4watts instead of about 12PEP) when I adjust the mic gain it starts a nothing, peeks at about 1 3rd of the way round the dial then rapidly dwindles to nothing at about half way and stays there for the rest of the dial.
I have had the cover off and adjusted, then replaced ct7 (ALC). No change.

I am suspecting the mic gain control itself, but because it works on AM I'm not so sure.

I brought the set second hand and it had a digicscan professionally wired in.

I live out in the sticks and it will be difficult to get a "real" tech to look at it, does anyone have any more ideas on what I can look at?

Cheers and thanx in advance

Message-ID: <8bsr0dhos1@newssvr03-int.news.prodigy.com>
Source record: 68924

Both these rcvrs have been packed away when I lost interest in Radio, about
15 years.

When I found out 10 meters was hot, I bought a Radio Shack HX-10 to verify.

That prompted me to break-out my boatanchors and get them on the air.
Valiant, Ranger Viking II etc.

HQ-170
----
was aligned & tubes all tested good. Has been used on 10 meters for the
past month
with good results. No major scratches on face, typical minor scratches
sides. All re-sprayable w/o problem.
Has original manual(not a copy). No clock. . All knobs original.

This can be yours for $225. You ship.

HQ-110

I haven't had time for this rcvr but did power it up and put a wire on
it... Plays on all bands but could use a good
alignment. Cosmetically in good shape, no major scratches, face is
clean....no scratches. All knobs original.

Can be yours for $175. You ship.

You twits just don't get it. It is selfish and inconsiderate to demand that you should be able to post FA notices to a DISCUSSION group just because you think in is your "right".

>
> I continue to be astonished that grown men who have attended

Not everyone can set filters and even if they can, why do they have to accomodiate you just because you want to do what ever you wish without any regards to anyone else? Unless there is some attempt to control FA postings you will have every greedy ebayer who wants to auction something posting to the group and soon you will no longer have a discussion goup, just a group full of FA postings.

I don't mind the FA listings... as long as the FA is put in the header...
I've went to read a couple of listings.. and found out there was a link in the listing to an auction page...!! No mention anywhere in the header that is was an auction...
Like the one where the header metioned what the item was.. and then read it and find out that I have "3 hours left to bid on this excellent piece of merchandise"
(more than likely there because he wanted more for it than was already bid..his reserve had been met already the day before)
So how in world do you filter those out.??
If I want to see what is up for auction... I go to Ebay or other places myself...
What are the rules for posting " x amount of hours left on this auction" ???

No the Driftrinix will not operate on DC without the converter module, if you do find a module you will need one hell of a DC reserve and panels.

Greetings!

I NEED a Genave model- "Alpha 200B" Service Manual or Schematics.

Two components have burned beyond recognition at the front left corner
of the main PCB. One is electrically connected in parallel with a 1W
Zener diode. (Cap.?) Also, the series dropping 1/2 watt resistor
for the zener is fried. Need values of these two components please.
All these parts are part of a 10 Volt regulator circuit. The Zener
reads out of circuit as 16.5 Volts at start of current draw test.
Is this correct?

Any help would be greatly appreciated!

I would be willing to pay for a copy of the real Service Manual.
Thanks!

Here's your chance to pick up a very hard to find item. It is probably the most comprehensive Morse Code keyer ever built. The MM3 is not produced anymore but it is still supported by Timewave . It does just about anything you can imagine with the Morse Code - 8000 characters of memory in 20 memories, CW trainer and QSO simulator, a beacon, RS-232 compatibility, etc. Very nice CW machine! Full manual included.

I am asking $250.00 plus shipping for this item. If interested please reply by e-mail.

Cordially,

Michael Crestohl, W1RC

"D. Stussy" wrote:
>
> ...And what I am telling you is ....(etc.)....

Well, sir; you're certainly entitled to say and think that.
But it won't change a thing. The only thing we *can*
change is our attitudes. We can sit here like schoolyard
bullies and kick sand at each other or we can find a way
to get along productively. I, personally, would rather
do the latter. I'm a big enough man to live peaceably with
someone- even if I don't agree with him- and I'm sure you are, too.
Life is way too short to go around making enemies
over something so trivial as this. So I'll continue to
abide by the "FA / FS" conventions, and wish you well as
you filter or simply refrain from reading such posts.

Kind regards,
Dave S.

Source record: 68795

OK, the heterodyne oscillator board is gone but there is lots
more left! Need anything for your Tempo One/FT-200 or
HF homebrew project?

I have a full set of knobs (not immaculate but I believe all
are original), the tank circuit, 100kc oscillator, 8mhz SSB
filter, vfo, meter, etc. Tell me what you need and I will
try to remove it intact -- cheap parts!

Also have:

1. Tempo One HF rig, clean and complete. Needs tuneup. $70.
(Incl. OP and Service Manual copies.)
2. Tempo One Power Supply w/speaker. Nice condition. $40.
3. Tempo One parts rig. Generally complete. Incl. case. $35.

- Thanks! & 73, DavidC K1YP in Hudson, FL

Hi Herb:
Value depends on which model they run from $190 to $450 on used market.
But you need to specify what model as they run all the way from SP-600-JX-1
to SP-600-JX-21A.

Unless I've mixed up my numbers here, the sx-28 in bad shape is worth a couple hun. The DX-100 in best of shape about $40. The dx-28, I've not heard of.

What's the cost per page from a place like Kinko's? I haven't checked on
prices, but I suspect it's a lot less
than the rate of $17 to $20 for a BA manual!! Just charging costs alone +
cheapest shipping would be a big help... I was looking at copied manuals at
last week's hamfest, and some were even around $25, for maybe 20 pages...

David,

I have a Tempo One that somebody hacked the VFO up, so I am mostly interested in the VFO. Do you still have the VFO intact? I would probably be interested in the whole parts rig in case something else is missing. What other parts are missing that makes this a parts rig?

>I'm considering some alternatives for ganging some capacitors and roller >inductors. Decision will be based on the value of some of my spare >components.
> Does anybody know the market price for the old National/HRO tuning knob that >has a large black knob and windows for the numbers? Also, I have the dual >output shaft right angle drive that goes along with it and wonder what it >might
>be worth.

The mechanism you describe is the National PW dial. It was used in all of the HRO receivers, and some other National gear like the HFS. There is also the NPW dial, which looks similar but has the output shaft in line with the input shaft. NPWs were used in the NC-100 and NC-100 family of receivers.

The big knob with the windows and the gearbox are meant to be used as a single combined unit. The ratio is 20:1 - it takes ten turns of the big knob to make the output shaft turn 1/2 turn. It is not meant for continuous rotation.

They were also available as parts from National. PW dials were available with anywhere from zero to 4 capacitor sections, and the NPW dials could be had with zero to 3 sections. They were popular for use in homebrew VFOs and receivers because of their solid construction, smooth feel and no-backlash design.

A while back I sold an NPW-0 dial (no capacitor sections) in good condition for $25 - and had several takers for it. Probably worth more, but I just wanted to find a good home for it.

What are you building that requires ganging?

The President Adams is built on the Uniden Chassis and is a great Radio
almost a classic - It could be your microphone amplifier the gain of which is
contolled by the Mic gain pot. The pot itself could be crook or the mic
amplifier itself I would certainly eliminate this first. Its a bit hard to
assume that becuase it works on AM that nothing is wrong with the mic amp or
pot. From memory AM has a preset pot as modulation is fixed in the Uniden ad
should no be adjusted. -

Have you tried giving the rig a bit more audio power though an external
amplified microphone - this may not work if the mic amp is shot - however it
will work if the pot is shot.

You could try bypassing the mic amp and pot altogether with an amplified
mic -

With the ALC trimmer cap out of circuit or wond to nothing you should be
getting full power (and overmodulated)

Try to eliminate the micamp and its gain control

I don't think there is very much wrong with yout rig - its a great chassis

Regards

I've owned 5 of them and my last one a "C" model brought an
unadvertised word of mouth $1000. The guy is on the air with it on a
somewhat frequent basis. I've heard tale that some 500C's are bringing
up to $1500. One of my "B" models sold for $800 and I ebayed a 500A for
just over $650. I recommend a B model as C's are bringing big bucks for
no other reason except they are newer. Stay away from the 500 (plain)
as it used a lower voltage power supply (same as the 400), used 5514's
in the modulator (hard to get but can be replaced with an 811A with
little trouble) and required an outboard VFO. The 500A was a little
better and used 811A's but still needed an outboard VFO. Some of the B
models came with a 4-400 rather than the 4-250, it really makes no
difference. The C model that I had ran a few more watts out with a 4-
250 rather than the 4-400...it was in the biasing. Don't settle for a
400 unless you are real seasoned and ready for a challange. There are
serveral real hard to find tubes in these and there are few
alternatives for modifications. The coils are even harder to find as
most of them were destroyed by humidity. As for Globe Kings (and others)
on the air, there will be many opinions about this. Mine is that there
are many real large high powered transmitters dominating the AM windows
right now with operators who are extreamly well versed in broadcast
engineering. They may unknowingly be a formidable presence that deters
less knowlegable operators from participating. As for production
numbers, there is someone out there who is gathering this information,
who, I don't know but I bet Leo would! In closing, if you find one,
grab it. They are worth every effort and were for many years the
flagship transmitter for many hams. John, AE4EN

5026. FT: swap WS21, WS68-P for Larkspur equipment

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-30 00:00:00 UTC
From: Nico van Dongen <nico.vandongen@compaq.com>
Message-ID: <8bv95b$i26$1@mailint03.im.hou.compaq.com>
Source record: 68871

Lately I have reconsidered my collection and I have decided to let go of some material in favor of the more modern stuff specifically Larkspur equipment

What I have available for swap now is:
WS68-P with accessories
WS21
WS38-MK2*
R209-MK2 with accessories
GRC9 with power supply DY88 and accessories
Racal 100Watt amplifier TA940B
Redifon GKR206A receiver/driver with GA480 100Watt amplifier unit (2 - 12 MHz SSB/CW/AM)
And if something very interesting comes up I might let go of my WS11-AUS complete with mounting (the mounting is a reproduction).

All material is in good working condition and is intended for swap only with, if required, price adjustments if the swap value is not in balance. I'm located in the Netherlands.

What I'm looking for in general is HF military of Commonwealth origin and of more or less modern vintage (1950 to 1970's) particular Larkspur equipment like:

Station Radio A14HP, a manpack HF transceiver. Use: primarily by Royal Marines Commandos and Para Battalions during joint operations. Frequency range 2-8MHz in 2.5kHz interval tuning points. RF output 2W (LP) or 22W (HP). MO or 9 pre-set crystal controlled frequencies. AM/PM R/T and CW. Range 7 miles (LP). One man load. Transistorised.

Station Radio C11/R210 (ssb), a vehicular HF transmitter-receiver. Use: similar as C11/R210 with increased range. Particular roles are long distance links in air transported operations, and those where compatibility with existing SSB links is required. Frequency range 2-16MHz. RF output 120W PEP SSB (HP) and 5W PEP SSB (LP), 75W DSB and CW. MO control with tuning in 1kHz steps with calibration. SSB (USB)and DSB with full carrier R/T, CW and FSK. Range R/T SSB 90 miles. Uses separate transmitter (C11 SSB), receiver (R210M) and supply unit. Commercial version Mullard L556.

Station Radio C14, a medium power HF transceiver. Use: Formation and rear link use in early stages of air transported operations. Frequency range 3-18MHz 8 fixed channels. RF output 100W PEP SSB and 50W CW. Range 50 miles. Commercial (Redifon GR 410) non ruggedised set.

Station Radio C41/R222, a vehicular radio relay set. Use: In Division and Corps. Frequency range 50-100MHz. RF output 18-35W (HP) and 4-10W (LP).

Range 20-30 miles. Wideband FM for multi channel modulation. Can be used for TDM operation (140kB).

Station Radio BCC 46U, a VHF manpack transceiver. Use: ASSU ground/air communications with close support aircraft. Replaced by Station Radio A43R.

Beacon Set, Radio MR 343, a lightweight transponder beacon. Use: Dropping zone marker beacon. Frequency range 200-240 MHz (Eureka/Rebecca equipment).

These installation descriptions came from the Web page of Louis Meulstee where a lot of information regarding larkspur equipment can be found (and much more).

Hello:
As the heading says, I have a Heath HP-23C power Supply including power cord for Sale.
50.00 plus shipping. Is in very good working condition.

Looking for a Johnson Matchbox antenna tuner. (Not the 1KW version) So a trade is possible.

Thanks
Bill KF4PGU

Well, at ae4en's request, I guess I'll share this with everyone!
Since I use a GK 400B on a nightly basis. Really enjoy the
"challenge"!

Yes, it requires rebuilding coils, usuallly, which I have been doing. Since
caring for them is tricky, rebuilding is necessary. Not a fun
job rebuilding them, but can be done. As for the tubes in 400's, 811A's for
modulators
are a good replacement, and 572B can replace the V70D's in the final only
change is to remove the filment xformers....replace them with 6.3 vac ones.
HV power supplies can be upgraded by replacing the 866's/866JR's with
solid state diode blocks, and removing the rectifiers fil xformer.
Not original, but from a glance, noone can tell! I don't operate mine with
the lid open anyway!!! hi hi hi....
Always looking for GK400 parts and individual decks (rf & mod)

I enjoy all the FS and FA posts. They save me from having to sort through all the junk on eBay that I'm not interested in...I am a frequent collector and sometime seller. If I see something posted here that interests me, I will go to eBay and look it up. Please continue posting your relevant FS items and your FA items here.

For the sake of discussion; I would respectfully suggest that anyone who does not enjoy FS or FA posts should ignore them or use the newsgroup filter options in his/her browser.
Please reply direct by removing nospam from my address...

Thanks,

Brian

Dave <gravman@idirect.com>
shared these priceless pearls of wisdom:

->Greetings!
->
->I NEED a Genave model- "Alpha 200B" Service Manual or Schematics.

When I got on the web six or seven years ago, I sent out manuals like this on the honor system. I got burned about five or six times and don't have those six manual available for "lend" any more. Nor do I now have them for my own "fixit" purposes.

Now, I've got a complete original factory manual for the 200B How about it, RAH, how do you all suggest we "enforce" the honor system? I'm more than willing to send the original to this guy to copy himself, but I want some assurance of return. What's the right way to do it?

Thank you, Brian, for being one of the many, many reasonable
people here. With all the name calling and sand kicking
going on, it's nice to see someone show restraint and
good sense.
D.S.

>
I receive many requests for certain manuals, but a friend once
mentioned that he suspect the time you use trying to help other idiots
is just wasted.
Have you ever asked them if they succeeded in repairing/modifying the
rig?
Too often the idiots will reply, "no, I sold the rig, so I didn't need
the manual", and the next buy may possibly ask you to copy the manual
once again, so pse don't be a fool!

Of course it is some sincere persons, it is some ways finding out what
sort of persons is calling you for information, in your own interest
you should be suspicious, it is better to ask many questions to avoid
wasting your time

Many have borrowed magazines and books from me, and often you discover
several years later that somebody has torn out several pages, perhaps
they were not your friends.....

good luck

5054. FS: SX-43

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-31 00:00:00 UTC
From: mccrk@aol.com
Message-ID: <20000331144205.08416.00000215@ng-cf1.aol.com>
Source record: 68749

Hallicrafters SX-43, with reproduction manual, good condition, works, largely re-capped, sensitive. Cosmetically an 8 on a scale of 10. Only problem is the S-meter. Meter itself seems fine. I'll throw in a second SX-43 that can be used either as a source of parts or a restoration project. The SX-43 was made in the late 1940s. Coverage is 540khz to 55 mhz plus 86-110 mhz to cover the commercial FM band. This is a fine old receiver from Hallicrafters' heyday, It's stable enough for cw and has a crystal filter. Pickup only in Washington, D.C. metro area. Price: $190--and remember, that's for two receivers!!

Steve, W3DEF

5055. FS: good used tubes

Newsgroup: rec.radio.amateur.boatanchors

Source record: 68754
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.policy

To echo several of the other posts on this thread, what is wrong with ham radio most of all is the very perception and statement that anything is wrong with it at all. Since the ARRL brought out those QST CD-ROMS, I have had the opportunity to read widely issues back to the late 20's. Apropos this thread, I have two observations. First, the Chicken Littles forecasting the demise of ham radio have been with us a long time, virtually since the beginning of licensing. Interestingly, the predictions, and the objections, are the same essentailly then as now. Secondly, more amusing, is the use of the phrase "today's crowded bands" in ads for ham gear. As far back as the mid-30's, I see instances of manufacturers using this term to sell receivers equipped with crystal filters, just as they use the term now to sell DSP boxes. It is all a bunch of hysteria, and history amply shows that nothing dire is likely to come of anything, however midguided, wrong-headed, orplain dumb the changes may be.

"TAKE A DOWNER mr.jan martin" and READ what "I" sent to Mr. Jim Weir earlier today. Not ALL people in this world are assholes! (in your opinion) I'm also an Amateur Radio Operator with call sign VE3OKT. Friends helped pick the OKT as an acronym for " OK TECHNICIAN ".

What does your's stand for?

Hi Jim Weir!

Concerning the 200B Manual, I read your newsgroup message about lending out manual/schematics and how you have been burned. I WOULD NEVER DO THAT TO ANYONE! I have in the past lent out tools and had to go chasing for them! I suggest that you POST the names of individuals on the newsgroups who have done you wrong with not returning your property IF they do not return your property! People get upset if you embarrass them publically! I write down names and what was borrowed from me on my wall calender for future reference. It works great! Some people honestly forget and apologize.

At the present moment, I'm waiting for a call from a local airport communications company for obtaining a COPY of that manual. The chap that owns the radio is a good friend that machined a Kohler Generator crankshaft for me as part payment for repairing/overhauling his radio. The radio is working but had a component burn and smoke up his Cessna cabin while in flight. He had to cut power and started a "dead stick landing" until he realized it was the radio smoking!

The front left corner of the main PCB has that component fried. It is connected in parallel with a 16.5V / 1W Zener. A dropdown 1/2W resistor for the Zener circuit fried but reads 14 Ohms. I need to know the true value of that too. A found with my DSE ESR Capacitor tester four 2.2uF Electro's dried out and replaced with new ones. The radio is in excellent condition - well looked after.

Where are you Jim? I'm in Ontario Canada between Toronto and Niagara Falls in a city called Hamilton.

The owner of the radio is a die-hard type and wants that radio fixed no matter what! He says the receive sensitivity blows away all the uP controlled stuff! (with a lot less birdies)

If you know of a place that will copy that manual, please find out how much and I will send a money order to cover all costs in advance to you. The owner simply wants to have a genuine copy for now and future.

I await your reply with appreciation Jim!

Thanks in advance!

- Dave -

People post the FA notices in the groups because they are effective.

Go try to fight it, but under those circumstances it's like pissing into the wind.

What filters? Many people still use newsgroup readers that can't filter out posts.

In any event, the problem I have with this is that one has been told that there is a specific newsgroup for these things - posting sale, auction, or wanted items elsewhere constitutes spamming of the non-sale newsgroup. That's the real problem as I see it.

Also note that this was originally posted to 5 newsgroups, where the remaining 4 that are in this reply do have a policy that says that sale messages are appropriate ONLY to "rec.radio.swap" and NO OTHER "rec.radio" group to which this is posted (plus others).

It's effective in driving people AWAY or even to the point of dropping that newsgroup due to the spam it creates (and is).

And these dimwits know that, but they what to come to the discussion groups and post their ebay teasers there too so they can make sure they shove it in you face so you will see their ad. They know that eveyone is not interested in the junk they have to sell and may not read the .swap groups, so they want to make sure you see the ad. They are not interested in courtesy or using common sense (can't use something you don't have), they just want to hawk their junk.

It's no real problem, AS LONG AS the guys doing it REMEMBER to include
that FA/FS at the beginning of the post so it CAN be filtered by those
not interested!

5087. Hallicrafter Shock treatment device?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-03-31 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <20000331071933.19684.00000072@ng-fx1.aol.com>
Source record: 68828

Watching the Learning Channnel's program tonight on CIA MIND CONTROL efforts, I noticed that after a female shock treatment subject was strapped to a table, that as the power/repetition rate/frequency knob was being adjusted, that the Hallicrafters "H" logo was clearly visible.

The settings seemed to be such that the woman twitched most severely when the knob was adjusted to a point around 3.5 to 3.7 Mc. on the dial. I don't know what Mc. might mean, though.
These experiments really took place on unsuspecing patients at a Montreal mental hospital. The subject interviewed was a Linda McDonald (I think).

The dial was sort of half moon shaped and had other tuning scales on it, so I suppose maybe they were using the scale which was disguised as the AM bradcast band (this was about the time rock-n-roll first made its appearance!). . In fact the entire torture device was built into an S-38 A/B/C style case.

Say..........You don't suppose the producers of the film found a surplus torture device disguised as a SW receiver? Or could it be they used an S-38 to fool us, the public? Or is the CIA trying to get the message across that BOATANCHORS are bad for you?

Another possibility is that tuning around the 80-meter Novice band and feeding the audio to her big toes caused the twitching? They said that the poor woman had 26 years of her life's memories erased by the CIA in this way.

Yup, it was 80 meters ham radio!

5088. FA: MAgnum Six RF Speech Processor

I have for sale an HP 141 Spectrum analyzer in good working order.

Included are the LF and HF modules as well as the 1.2 GHz module.
Manuals for the Mainframe , IF module and one RF module is included (I
did not look but seem to recall it is the HF module)
Asking $1,100 for the complete set plus shipping.
Will offer a little better deal if you can pick it up.
Pics available at http://members.stratos.net/w8ron/Hp141.html

Sorry, I missed that show. I was watching a thing about the U.S.S. Scorpion, in which the film showed the crew sending, by CW, a message to headquarters. On the bulkhead and operator fine tuned an HQ-129. I had never known the Navy used that receiver, but there's no telling what you can learn by watching The Learning Channel or History Channel.
